About the Authors

Dr. Rajan Gupta is working as Associate Professor in school of IT at Vivekananda Institute of Professional Studies - Technical Campus (Affiliated to Guru Gobind Singh Indraprastha University, New Delhi) since 2006. He has completed his Doctorate in Computer Science and Applications from Maharshi Dayanad University, Rohtak, Haryana. He has more than 21 years of teaching experience at various graduate and post graduate institutions. He has more than 20 research papers to his credit in various refereed International /National Journals and Conferences and also has two published patents. His interest areas include Financial Fraud Detection, Digital Marketing, Cyber Security, IoT and Machine Learning.

Prof. (Dr.) Supriya Madan, Dean, School of IT at Vivekananda Institute of Professional Studies - Technical Campus has a versatile experience and is an erudite scholar in her own right. Her association with the field of Information Technology is a testimony of her fruitful and ongoing journey. She started her professional career in 1989 as a senior programmer and EDP manager of a reputed public limited finance company. After gaining practical knowledge and successful completion of projects, her zeal and enthusiasm for teaching brought her into full time academics in the year 2000. She has published patents and her research work has been published in reputed national and international conferences and International Journals and are quoted as references.

Acknowledgement

First and foremost, praises and thanks to the God, the Almighty, for His showers of blessings. We are overwhelmed and humbled and feel grateful to be able to acknowledge our depth gratitude to the Management of Vivekananda Institute of Professional Studies – Technical Campus for always encouraging and motivating us to achieve greater heights

Any attempt at any level can 't be satisfactorily completed without the support and guidance of our family and friends

Our gratitude also goes to the team at BPB Publications for being supportive enough to provide us quite a long time to finish the book and also allow us to publish the book.

Finally, our thanks go to all the people who have supported us to complete the book directly or indirectly.

Preface

"Digital marketing" is used to contact a specific audience, analyze their needs, promote products and services, and raise brand awareness. Digital marketing employs digital media, social media or websites, whereas traditional marketing relies on the traditional media like as magazines and newspapers. The appropriate Internet strategy could make a big difference in how well you market and sell your products. Advertisers can use an Internet to display adverts which have the ability to approach millions of people across the world.

This book covers many different aspects of digital marketing and the importance of internet in digital marketing. This book also includes the importance of Search Engine Optimization in marketing. It shows how ad ranks are important for the organizations. This book solves the basic understanding towards social media marketing viz. Facebook / LinkedIn / Twitter marketing. It also gives importance for emerging social media platforms such as Instagram and Snapchat. This book gives information about the usefulness of Search Engine advertising in Search engine marketing.

This book takes a practical approach for digital marketing learners. It covers number of web analytic tools such as Google analytics. It will cover information such as creating an ad campaign on Google / Facebook. Reader can learn about current tools and techniques of digital marketing. The reader can develop a digital marketing strategy for any business irrespective of its size, nature, product etc.

This book is divided into 12 chapters. They will cover Digital Marketing basics, basics and advance in Search Engine Marketing, why Digital Marketing is a must for businesses, examples for creating digital advertisement on different platforms, using web analytics for measuring the performance of advertisement campaigns etc. So learners can get more interest in Digital Marketing tools and techniques for promoting their products and services at an online platform. The details are listed below.

Chapter 1 will explain the need of Digital marketing. How Digital Marketing is better than the traditional marketing approach. Role of Internet and Evolution of Digital Marketing will be discussed in this chapter. Will give details of current trends in digital marketing such as Artificial Intelligence, Metaverse, Programmatic Advertising, Chatbots etc. Will explain about P.O.E.M. framework and Digital Marketing Strategy. Will also discuss different digital marketing models.

Chapter 2 will cover opportunity and challenges of Internet Marketing, will explain E – mail Marketing, Online Marketing. Give details about Viral Marketing, Interactive Marketing, Viral Marketing and Blogs.

Chapter 3 will cover search engine Advertisement. We can create Ad Campaigns and generate campaign reports. Will cover different buying models of digital marketing, Youtube marketing etc.

Chapter 4 will explain role of influencer marketing in Social media marketing. Will help in building a successful social media strategy.

Chapter 5 Explains Facebook marketing tools. Will explain different facebook marketing tools such as facebook ad manager etc. Will learn that how an ad on facebook can be created.

Chapter 6 will cover importance of LinkedIn Marketing. Will explain that how a successful LinkedIn Strategy can be developed.

CHAPTER 1

Digital Marketing

Introduction

The term “*digital marketing*” is composed of two terms: “*digital*” and “*marketing*”. In basic terms, digital refers to anything you may see or hear on an electronic device such as a television, radio, or cell phone. Identifying the requirements of the customer and providing products or services that meet those demands is what marketing entails.

“Digital marketing is a form of direct marketing which links consumers with sellers electronically using interactive technologies like emails, websites, online forums and newsgroups, interactive television, mobile communications, etcetera.”

Digital marketing is used to contact a specific audience, analyze their needs, promote products and services, and raise brand awareness through the use of various digital channels available online. It is primarily accomplished through the use of the internet.¹

When it comes to marketing, digital and traditional approaches are quite different. Digital marketing uses digital media, as with social media or websites, whereas traditional marketing relies on traditional media such as magazines and newspapers. Traditional marketing does not allow direct connection with consumers; however, digital marketing allows for a greater degree of engagement and interaction with the customer base.

Whether it is on social media or in an email, several digital marketing platforms instantaneously link you to the target audience. The use of video, polls, or webinars to communicate with clients may help your company establish stronger, more lasting bonds with them as well. Working in tandem with your clients’ needs will improve the efficiency of your company. This is made possible by digital marketing, which allows you to interact with clients and resolve their concerns instantly.

Structure

In this chapter, we will learn about the following topics:

- Evolution of digital marketing from traditional to the modern era
- Web advertising
- Current trends in digital marketing
- Info-graphics implications for business and society
- The emergence of digital marketing as a tool
- Drivers of the new marketing environment
- Digital marketing strategy
- POEM framework
- Digital landscape
- Digital marketing models

Objectives

This chapter provides a quick introduction to the basics of digital marketing. A reader who desires to learn about the paradigm shift in marketing from traditional marketing to digital marketing can study the evolution of digital marketing. After reading this chapter, the reader will be able to learn the use of the latest technologies, such as artificial intelligence, augmented and virtual reality, and so on, for creating a digital marketing strategy. The reader can develop an understanding of various digital marketing models after reading this chapter.

Evolution of digital marketing from traditional to the modern era

Currently, digital marketing is teeming with ever-increasing chances, and many people do not wish to lose out on them. Digital marketing could help them develop their businesses. More than 170 million² people use social media on a regular basis nowadays, thanks to the internet and smartphones, whereas digital marketing specialists are attempting to train themselves on the key concepts of digital marketing; as a result, they could attract more clients.³

Digital marketing enables a business to promote its products or services through a variety of internet platforms, allowing it to connect to its target audience easily. The significance of digital marketing is unrivaled these days,

and it is expected that digital marketing will soon totally supplant traditional marketing. Digital marketing would completely dominate offline and traditional marketing due to its unfathomable features and prospects.

People would prefer digital marketing over traditional marketing because they are becoming more tech-savvy and using smartphones, computers, and also tablets.

The phrase “*digital marketing*” was coined, but was first used in 1990. At the time, the Web 1.0 platform was built, which assisted users in finding the information they required. However, they were unable to distribute this information via the internet. At present, marketers and experts are oblivious to the benefits of digital marketing. They had no idea whether or not their techniques would work since the internet had not yet gained mainstream adoption.

The first clickable Web-ad banner came online in 1993. HotWired bought a few banner ads for marketing and advertising at the time. This was the start of an era of digital marketing.

Figure 1.1: First image ad by the hotwired⁴

Several search engines and tools, such as *Look Smart*, *HotBot*, and *Alexa*, were launched in 1996. *Sixdegrees.com* was the very first social networking site to be founded in 1997. The year 1998 was a watershed moment for digital marketing because it was the year Google was created. In addition, Microsoft introduced MSN and Yahoo debuted Yahoo Web search in the year. An internet bubble burst two years later (in 2000), wiping out all smaller search engines. This frees up additional room and opportunity for the industry’s behemoths.

In the year 2002, *LinkedIn*, a professional social media network, was created. *WordPress* was released in 2003, whereas *MySpace* was launched the following year. Gmail was originally launched in 2004. *Facebook* and *Google* both went public in the same year. After that, in 2005, *YouTube* was introduced, which revolutionized marketing strategies.

Another notable year was 2006, when search engine traffic was claimed to have increased by 6.4 billion⁵ in a single month. *Microsoft* debuted an MS live search in the year, and *Twitter* was established at the same time. *Tumblr* was

founded in 2007. In addition, *Hulu*, the Web streaming service, was created this year. In the very same year, *Apple* released its *iPhone*. *Spotify* and *Groupon* were both launched in 2008.

Google Instant was introduced in 2009 to provide real-time search engine results. AdWords are three-line ads that appear at the top or to the right of the search engine results, and AdSense, the cost-per-click advertising program, was first developed by *Google*. With time, *Google* began to target ads depending on client interests, and as a result, it became a major participant in the digital business sector. *WhatsApp* and *Google Buzz* were both released in 2010 and created new opportunities for organizations to market their products and services.

Google+ and *Google Panda* were introduced in 2011. By this time, People had already started devoting time to various mediums, and their viewership had overtaken that of television.

The year 2012 will be remembered as a year of social media. The corporations' social media budgets had increased by 64%⁶, and Google Knowledge Graph was established. The most widely used social networking platforms were Myspace and Facebook. Companies knew that such sites would help them extend their enterprises across the internet; therefore, they were frantically attempting to advertise their products and brands on numerous social media platforms. They have also attempted to use social media to promote their enterprises. Tumblr was purchased by Yahoo in 2013.

EVOLUTION OF DIGITAL MARKETING

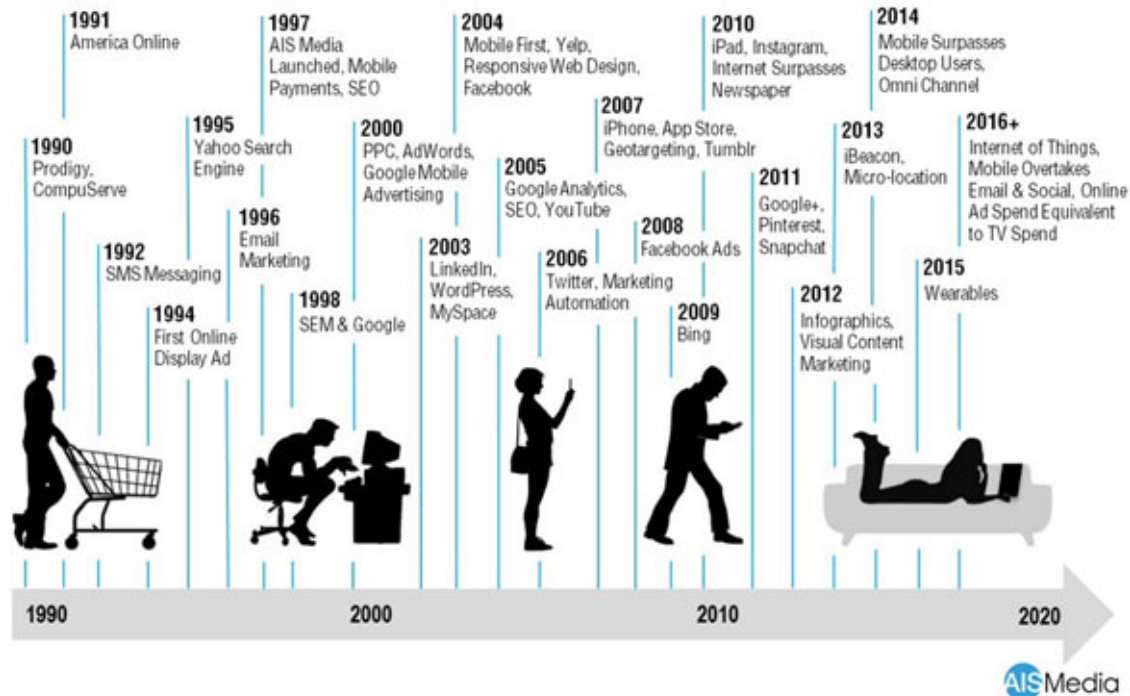

Figure 1.2: Evolution of Digital Marketing⁷

In the year 2014, the number of mobile and smartphone users outnumbered PC users for the first time. The *Facebook Messenger* app, *LinkedIn*, and also *iWatch* targeted adverts were launched. *Facebook* bought *WhatsApp* earlier that year.

Snapchat released its Discover feature in the year 2015. Numerous new technologies, such as analytics, wearable technology, and content marketing, were also invented in the same year. This year, Facebook also launched the “Instant articles” feature.

Cookie was just another significant milestone in the field of digital marketing. To keep track of the user preferences, the first cookie was established. The function of the cookie has changed over time. Today’s cookies are often coded to enable advertisers with a variety of ways to collect literal user data.

As a result, it could be stated that digital marketing was rapidly expanding, and each day it offered a new set of chances to both users and business owners.

Although the world has become more digitalized, today’s marketing requires a rather more modern and technical approach, and several classic marketing tactics are still being used. A strong company is one that can adjust to any situation and is very well to meet challenges. A fundamental feature of a

successful marketing strategy is its adaptability, which allows it to modify on the fly depending on the relevant and reliable data. The marketing strategy must not rely just on one method of marketing to approach targeted clients in the most effective way possible because both traditional and digital marketing may complement and also reinforce the brand message.

The focus should also be on how to properly integrate diverse marketing tactics to achieve maximum outcomes. Rapidly expanding technology needs a more digitalized response, which changes some components of the long-standing marketing plan. Traditional marketing tactics have a greater emphasis on selling things, but current marketing places a greater emphasis on identifying consumer needs and satisfying customers via new methods such as social media marketing. This current technique focuses on how to interact with the audience, address their worries, and provide them with one of the most pleasurable experiences possible; thus, they could return to complete the purchase later.^{8,9}

Traditional marketing simply allowed for a limited level of expansion; however, advertising can help organizations, especially small businesses, to develop more swiftly. Since the digital marketing world is so wide and trends change so frequently, it is vital for digital marketers to keep up to date and understand what's going on. Social media marketing, **Search Engine Optimization (SEO)**, email marketing, mobile marketing, content marketing, and other digital marketing approaches could be used by brands. The first step in establishing the digital marketing campaign seems to be to modify the firm's website, and the company should ensure that this really reaches out to the potential customers and also provides the best available service.¹⁰

Role of internet

A unique concept will go a long way toward launching successful small businesses. However, a business cannot be lucrative unless it can persuade consumers to visit its products. Businesses could use the internet to promote, communicate with customers, and sell their products. The appropriate Internet strategy could make a big difference in how well you market and sell your products.

Web advertising

Marketing is one of the methods that organizations use to obtain customers. Advertisers can use the internet to display adverts that have the ability to approach millions of people across the world. On the internet, there are a variety of advertising choices. You can run banner and text advertising on well-known websites that really are relevant to the industry. When you promote your own brand of hot sauce, for instance, you may consider placing advertisements on food-related websites like allrecipes.com, concentrating on pages with hot sauce recipes. You also can advertise on social media sites like Twitter and Facebook.

The Web as a sales channel

The internet also provides retailers with a new avenue through which to market their goods. The retail store without even a physical location was almost unheard of 30 years ago. You can now buy practically anything over the internet by going to a firm's site. This allows you to offer more products without incurring the expense of renting and stocking more storage space. Entrepreneurs that want to retain start-up costs low may appreciate the option to offer goods without the expense of a physical location. You could use a third-party drop shipper to store and distribute the products if they do not have enough storage space.

Market research

Gathering knowledge of client preferences and habits is an important aspect of marketing. It is impossible to offer a correct product to market if you do not find out what consumers want, how much they are ready to pay for the products, or who the competing competitors are. Email surveys, Web-based surveys, including online technologies that track user behavior and also preferences could all be used to collect consumer data via the internet.

Communication and customer service

The prosperity of a small business depends on establishing a loyal customer base that returns and purchases products on a daily basis. The internet might help businesses improve customer service by providing consumers with an alternative channel of interaction that really is truly available at all the hours of each day. Additionally, businesses could use the internet to convey important consumer information such as guides, product manuals, and answers to

frequently asked questions. It can help customers make well-informed purchasing decisions.

Current trends

With the rate of change increasing year after year and the scope of digital marketing expanding, a digital marketer must devote time and efforts to upskill and also learn on a regular basis. Knowing how the algorithms work, new modifications, and features work provides you an advantage and allows you to develop effective campaigns for you and your organization.

As time passes, digital marketing fans all over the world have begun to seek and look for the most recent trends.

Previously, voice search optimization and artificial intelligence were formidable notions, but such new digital marketing techniques are now among the top concerns for most business owners.

AI in marketing

Artificial intelligence is a sophisticated system that learns by analyzing big data on a particular field or topic and specifying the most efficacious patterns. The AI's learning skills allow programmers to make significant changes in outcomes by letting the AI use the most effective tactics it really has discovered.

There are numerous instances of AI performing previously unimaginable tasks, such as content authoring for *JP Morgan and Chase. Persuado*, an AI-powered content authoring assistance, has been implemented.

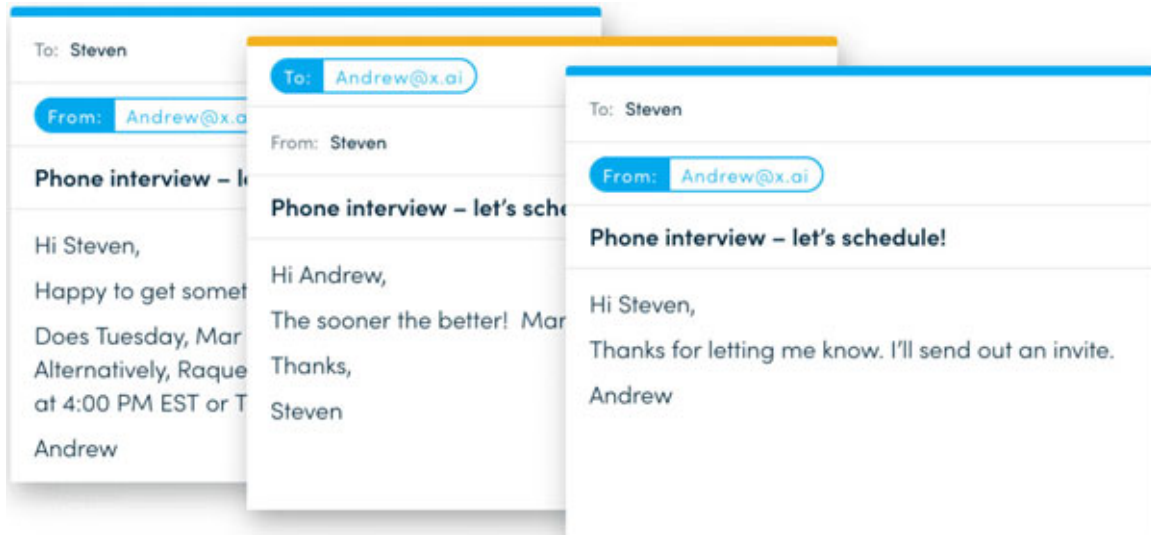

Figure 1.3: AI in marketing¹¹

AI has the potential to do a wide range of activities and serve as an extension for any digital marketer who knows how to use it. It is cost-efficient, precise, and very effective. With several huge companies using AI, every team must have a plan in place that includes AI in their toolkit.

Metaverse

The Metaverse is commonly referred to as a realm within our world. Meta (Facebook) is indeed the current owner of the Metaverse. The concept of the digital realm in which virtual and augmented realities co-exist to produce the universal experience is both novel and unexplored.

A computerized avatar of oneself in the futuristic environment where you may do whatever action you want appears to have a lot in common with gaming. The world has already been buzzing about how **Artificial Intelligence (AI)** will soon take over human life in many ways. The transition has already begun, even if we are not aware of it. Sixty percent of internet users are using an AI chatbot to answer inquiries on a variety of apps and websites.

Figure 1.4: An example of Metaverse¹²

Metaverse, the network of realities or the virtual universes wherein space exists practically anywhere, has enabled social commerce. Digital marketers, on the other hand, have seen a chance for their companies to fill that void and establish a whole new kind of digital marketing.

Despite the fact that we have not yet reached the pinnacle of marketing in this field, the potential is enormous.

NFTs

The digital assets that you could trade are the **Non-Fungible Tokens (NFT)**. Every NFT contains a unique token that identifies it as an original NFT, which you own. NFTs have not only rocked the art and the technology world, but they have also begun to disrupt the marketing sector.

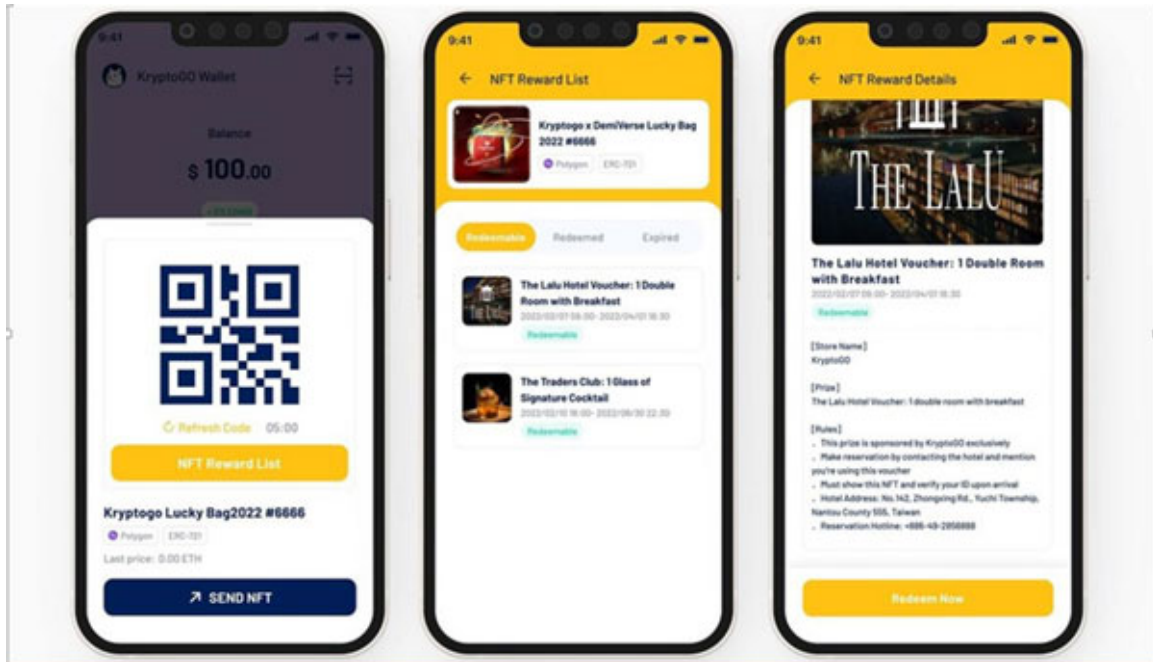

Figure 1.5: An example of NFTs¹³

As part of the main marketing objectives, free NFTs are given away in the raffle. *Marriott Bonvoy*, for instance, held a raffle in which the winners received their own NFT and 200,000 Bonvoy points.

Only high-end brands such as *Adidas*, *Marriott*, and others have used digital marketing strategies like this. As more firms adopt NFTs as marketing tool, the potential for development and expansion is limitless.

Crypto

Cryptocurrency is often referred to be the “*Instagram*” of the financial world. It joined the industry and gradually conquered it, despite the fact that no one realized its potential.

Everybody planned to spend in cryptocurrency since it is now one of the coolest things for the millennials. Crypto investing platforms are taking advantage of this demand among the younger generation by providing them with free portions of one cryptocurrency in order to raise awareness and give them the taste of such an investment option.

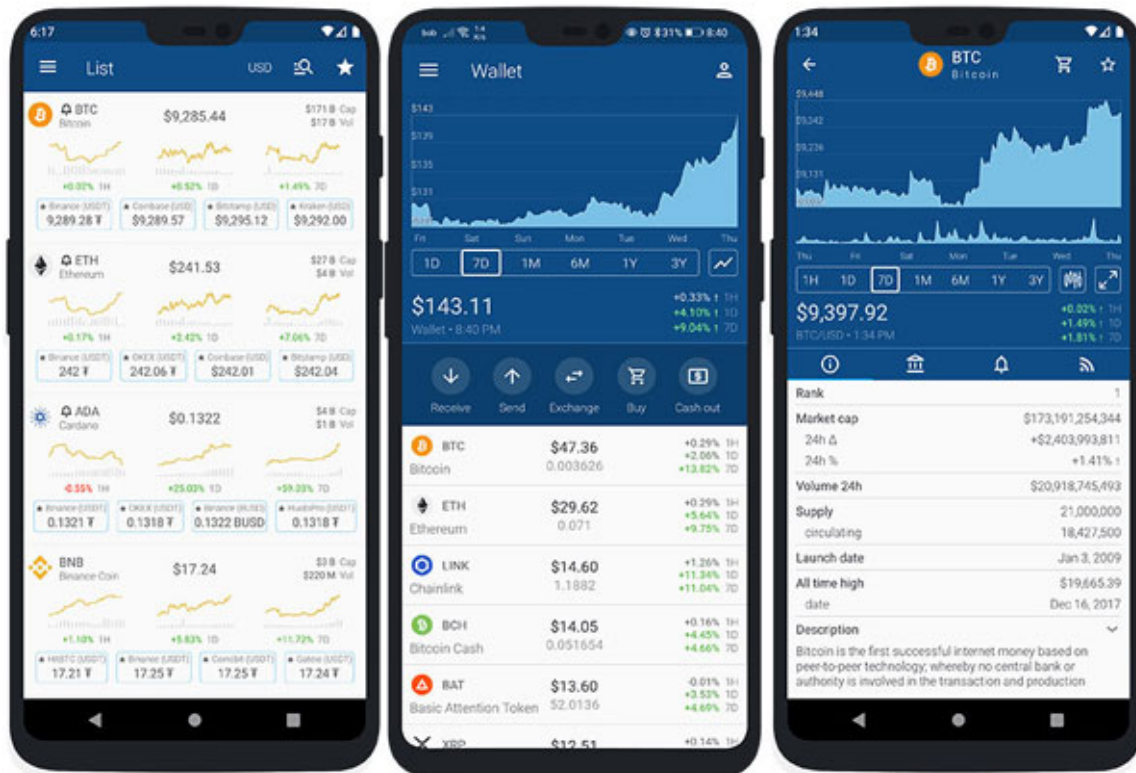

Figure 1.6: An example of Crpto¹⁴

It is no surprise that we can use Cryptocurrencies for groceries and daily needs, like *Google Pay*. Digital marketing 2022 trends have certainly ascended to new heights.

Livestream commerce

Livestream commerce is a relatively new concept in India, yet it has effectively established a multibillion-dollar sector in China. Brands select social media sites to display their items live, with their audience having the opportunity to purchase the product in real-time.

On Instagram, the Shop feature has allowed marketers to include the Shop Now button over live stream content, saving customers' time.

Augmented reality

According to Wikipedia, Augmented Reality is indeed an interactive experience of the real-world environment in which computer-generated perception information enhances things in the real world.

Figure 1.7: An example of Augmented reality¹⁵

It has the following three basic characteristics:

- A hybrid of the real and virtual worlds
- Interaction within real-time
- Precise three-dimensional registration of the virtual and actual items

While **virtual reality (VR)** creates a lot of hype and gets people excited about big sci-fi ideas, whereas Augmented Reality is considerably more marketable, AR is anticipated to remain to exceed VR in terms of market share, according to experts.

Brands are increasingly using AR technologies to improve the customer experience and boost revenue.

Programmatic advertising

Programmatic advertising is the process of automating the buying and selling of advertisement inventory in real-time through an automated bidding system. Programmatic advertising enables brands or agencies to purchase advertisement impressions on publisher sites or applications within milliseconds through a sophisticated ecosystem.

When AI has been used to automate advertising, companies may target more specific audiences. Automation is both quick and effective, resulting in improved conversion rates and lower customer acquisition expenses.

Real-time bidding is a sort of programmatic ad buying that enables better and faster targeting, qualifying advertising to be bought and sold on a case-by-case basis. This ensures that only visitors are a part of the target audience.

The following is a breakdown of how programmatic advertising works:

- Artificial intelligence systems evaluate the visitor's activity, enabling real-time marketing modifications toward the more likely-to-convert audience.
- Companies that use programmatic advertising can acquire this information about their target audiences and then target them more accurately.
- The digital advertising process includes **demand-side platforms (DSP)**, **supply-side platforms (SSP)**, and **data management platforms (DMP)**. But the roles are extremely distinct, so they work together to allow automated advertising buying and selling.
- Using a DSP, marketers may acquire inventory across a wide variety of publisher sites based on individual users' particular behavior, demographics, geography, past online activity, and so on.
- Advertising inventory is made accessible via ad exchanges by publishers. Also, DSPs aggregate such exchanges to determine what impressions advertisers should purchase.
- In order to assist marketers in achieving better marketing outcomes, DMPs gather but also organize data from several sources, including first- and second-party sources and data from third parties. It is often used in marketing to assist target and segment consumers in order to get better outcomes.

Automated auctions for digital ad impressions are made possible by the SSPs. The individuals who use an SSP provide the space, or inventory, for the ad to display, known as the "*supply-side*". SSPs, DSPs, and DMPs are all used in programmatic media buying. Because of the integration of DSPs, DMPs enable the procedure of buying ad inventory just on an open market, providing the possibility to reach the target audience. DMPs gather and analyze a large quantity of cookie data, allowing marketers to make better conclusions about the target audience.

Figure 1.8: Working of programmatic advertising¹⁶

Just on the publisher's end, publishers use an SSP to handle their unsold ad inventory. An SSP records information on the visitor's attention span, like how long they stayed on the site and how many more pages they viewed per visit. SSPs would be in charge of selecting the winning bid and serving a winning banner ad on the publisher's website at the end.

Chatbots

In the year 2022, chatbots, the AI-based technology employing instant messaging to connect with customers and site visitors, are projected to be one of the leading digital marketing trends. It is intended for written or auditory communication with the customers.

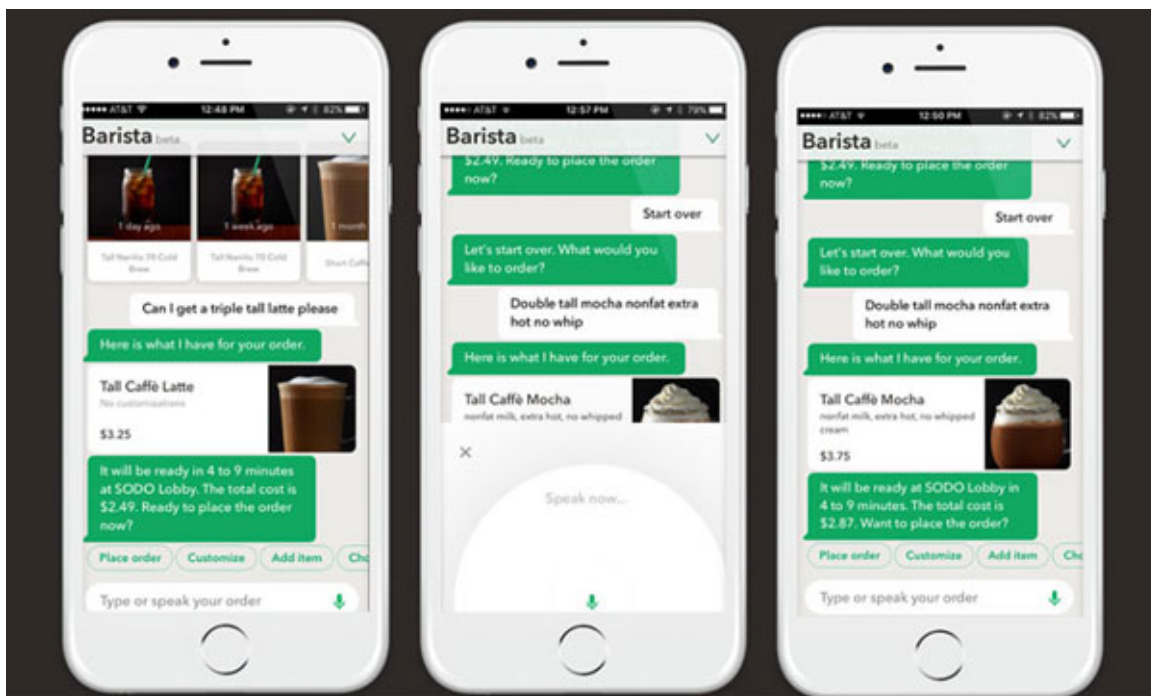

Figure 1.9: Chatbots as a digital marketing trend¹⁷

Businesses can use chatbots to engage with customers. Since the website has a significant number of visits at once, technology that could respond to thousands of users at once is advantageous. This makes customer service available seven days a week, 24 hours a day. Also, chatbots provide quick solutions to inquiries and simple concerns.

Sixty-three percent¹⁸ of the respondents preferred messaging upon chatbots to interact with businesses or products. Virtual assistance delivers excellent customer service while allowing a company to concentrate on more important responsibilities by avoiding repetitive tasks.

Starbucks has launched a chatbot that works through the *MyBarista* app and allows you to order using *Amazon Alexa* or SMS.

Marketing automation

In the past year, automation has boosted the sector significantly, and it will be among the most important digital marketing trends in the year 2022. Marketing automation is really about streamlining and automating processes in terms of making them run more smoothly, effectively, and quickly. Lead collection and nurturing will be one of the important advantages of marketing automation.

If you can drive a lot of traffic to the website but do not capture quality leads at the correct moment, the traffic is pointless. You could link numerous **Customer Relationship Management (CRM)** systems and lead nurturing the software with the marketing automation to help you in gathering leads anywhere at any time of day and personalizing the process.

Following the collection of such leads, you could nurture them in a stage-by-stage manner. This guarantees a greater and higher-quality conversion rate.

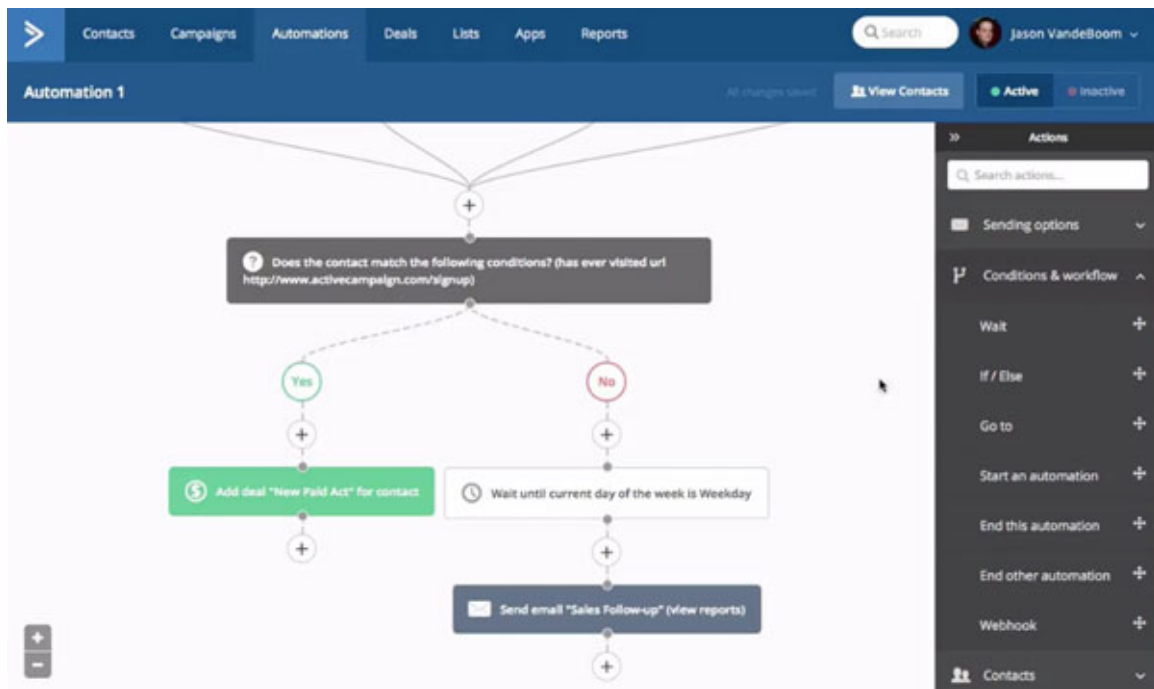

Figure 1.10: An example of Marketing Automation¹⁹

WhatsApp marketing

In 2022, WhatsApp marketing is expected to be among the most important and highly used digital marketing trends. WhatsApp has revolutionized the way businesses communicate and interact with customers. You can now deliver personal messages using an app that is used by individuals of all ages, and thus, checked frequently across the day. You do not want to creep out potential customers since you will be chatting with them via your WhatsApp Business Account, which would also help them trust in you and the business.

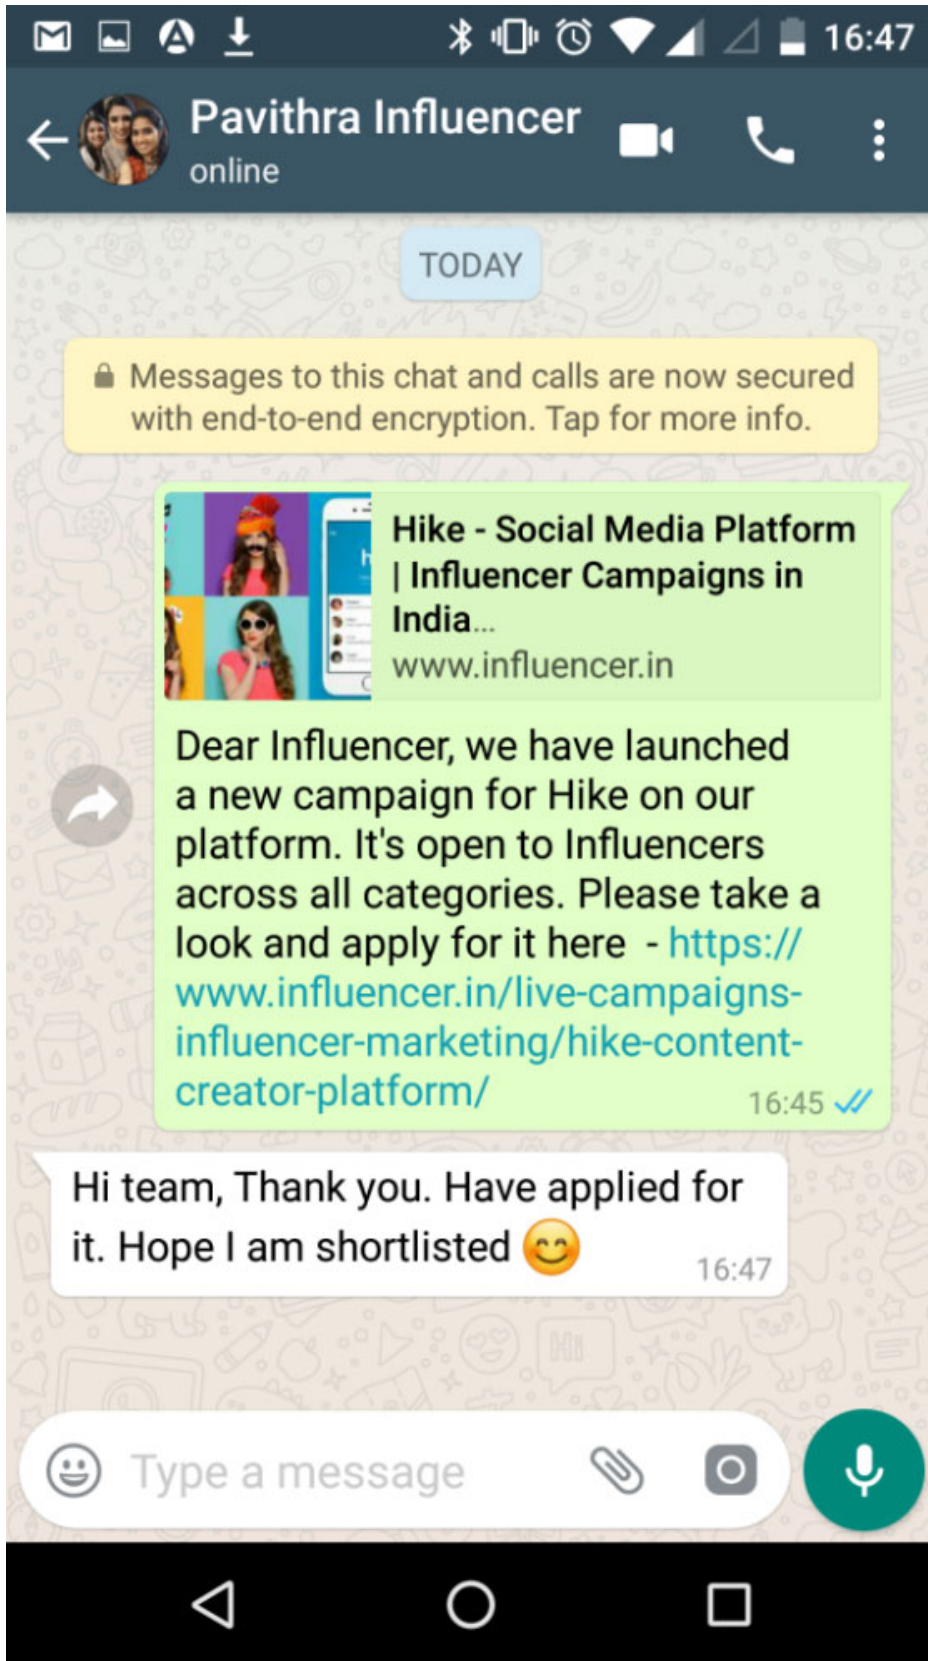

Figure 1.11: WhatsApp marketing²⁰

Customers might place orders with you, and you might keep customers informed on the status of orders and receive and handle payments.

Info-graphics implications for business and society

An infographic is a visual representation of facts that attempts to make the information understandable at a glance. People use infographics to quickly convey a message, render large amounts of data easier to grasp, demonstrate data patterns and connections, and also track the changes in variables over time.

Infographics can be found in practically any public setting, including traffic signs, tag clouds, subway maps, musical scores, and weather charts, to name a few instances.

Infographics are used by all levels of management in an organization for high-level data views. Bar graphs, histograms, pie charts, Gantt charts, line charts, mind maps, tree diagrams, and network diagrams are examples of infographics. Such technologies are typically included in business intelligence software. As the amount of the data collected inside the office and elsewhere expands, infographics are frequently has been used to help people understand it.

For content marketing, infographics are indeed a popular choice. Since they rely on the innately captivating nature of the picture, such highly visual tools work brilliantly. The desire to read improves by 80% when the content is colorful. Visual material is 40% more probable than the other types of content to receive social shares.

The way you convey vital details to your customers in such a visual style is called **information design**. There are several sorts of information design, and infographics are just one of them.²¹

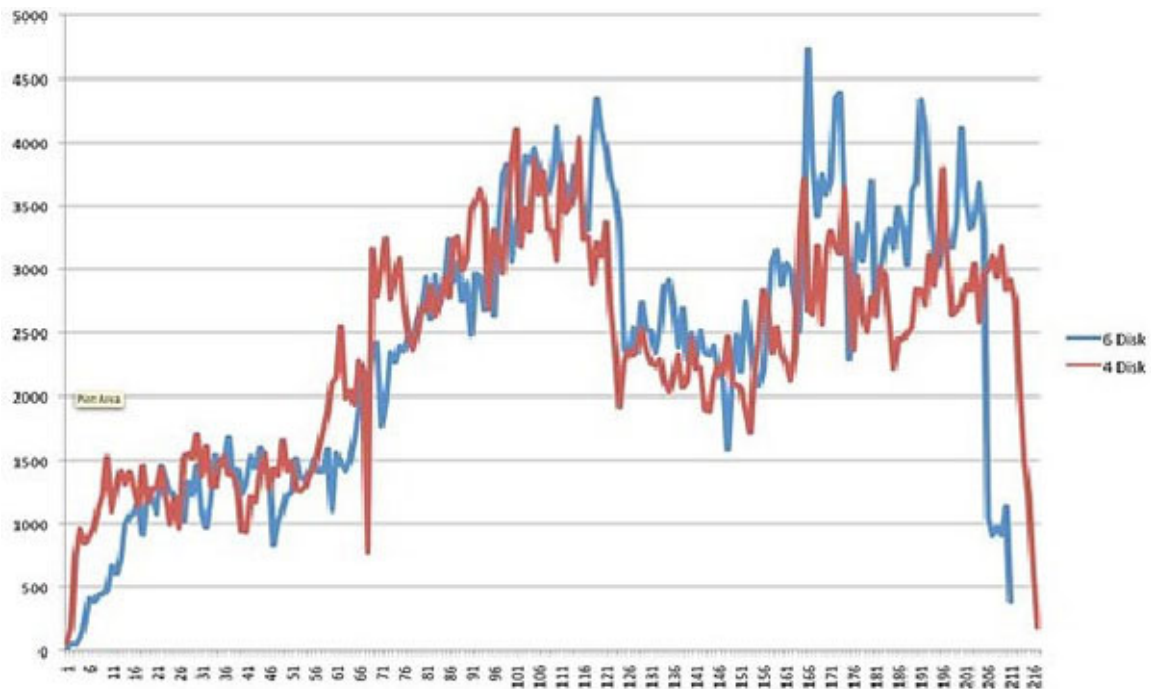

Figure 1.12: Rough sketch as an example of Infographic²²

Your company's branding relies heavily upon information design. The information design enhances your brand by conveying a key statement about your business. The correct design components can help your organization stand out as either casual and kid-friendly or formal and polished. It is up to you whether your imagery seems light and cartoonish or dark but also realistic. The information is just as vital as the design aspects.

Informational designs could effectively communicate your message together in a single glance. Additional information would be provided through the colors, typography, and pictures. Information design would be crucial in getting the job done if you are searching for a technique to communicate more with less language, which will emphasize the rebranding logo and style.²³

Benefits of infographics for business

A well-designed infographic may provide numerous advantages to your company. Consider how the infographics could liven up any marketing campaign in such an instant. One can diversify the material with infographics so that browsing through your site is about more than skimming subheadings. Every week or two, add an infographic to separate text's monotony.

An infographic is a great technique to make an impact on people's minds. If you really want your clients to remember an important idea for a long time after they have left a page, using an infographic to convey it is a good method to do so.

Because infographics are visual, they will catch an eye anywhere, help stop the audience in their tracks, and make them think for the moment. Make an email message more intriguing by including an infographic. Include an infographic within your social media feed to break up the monotony of updates. Infographics are engaging and easy to distribute, offering indisputable value in your industry.

Impact of Infographics on brand awareness

An infographic is perhaps the most appropriate media for describing complex pieces of information swiftly, precisely, and simply. The usage of infographics facilitates the development, organization, recording, and communication of data.

Infographics are useful for increasing brand awareness and reaching out to reach a wider audience. Infographics have had the potential to just go viral, with people sharing them on social media. Infographics are indeed an effective technique for increasing engagement, maintaining readers' interest, and converting website visitors into buyers.

Here are some of the ways that infographics facilitate brand awareness:

Effective marketing tool

Infographics are indeed an important part of any digital marketing strategy. Even Google Trends has seen an increase in online consumers' interest in infographics. People prefer visual content to text-only content, which is why infographics are becoming increasingly popular. As a result, infographics are used by digital marketers to engage a big audience. As technology advances, a growing number of individuals are using smartphones. Because of their visual character, infographics are among the most successful ways of bringing material to smartphones, which are today's most common gadgets.

Helps in spreading brand awareness

Through compelling visual content, the infographics may convey critical information about brands. An infographic could be a great communication tool

to define your brand if it is prepared in a precise and impressive manner. In reality, even in a generic infographic, carefully placing your brand logo could greatly increase brand awareness. An infographic, as per the digital marketing experts, not only raises awareness of the brand but also enhances the website traffic.

Infographics are sharable and linkable

Infographics are indeed sharable material that may be shared in just about any format with the users. They have a longer shelf life and could be shared with the users even after many months of their publication. Infographics are indeed the ideal type of linkable material because they can be shared on other websites before being linked back to your own, increasing brand exposure.

Creates additional inbound marketing opportunities

Infographics' unique information and data can indeed be used on a variety of platforms to produce more inbound marketing chances.

[The emergence of digital marketing as a tool](#)

Digital marketing is important because it connects a business with many of its customers, whereas they are online, and it can be used in just about any industry. It connects businesses with potential customers through Google using search engine optimization and pay-per-click social media using social media marketing and email using email marketing. Here are some examples of the new digital marketing tools.

MailChimp

MailChimp is indeed the social advertising and email marketing platform that allows you to plan, execute, and track digital marketing campaigns. It is among the most effective digital marketing tools for improving campaigns and tracking traffic. Furthermore, the platform enables integrations with various **Software as a Service (SaaS)** providers. The feature is particularly useful for email marketing, as it allows you to interact with the audience. In the realm of email marketing, *MailChimp* is indeed a household name. MailChimp's features include:

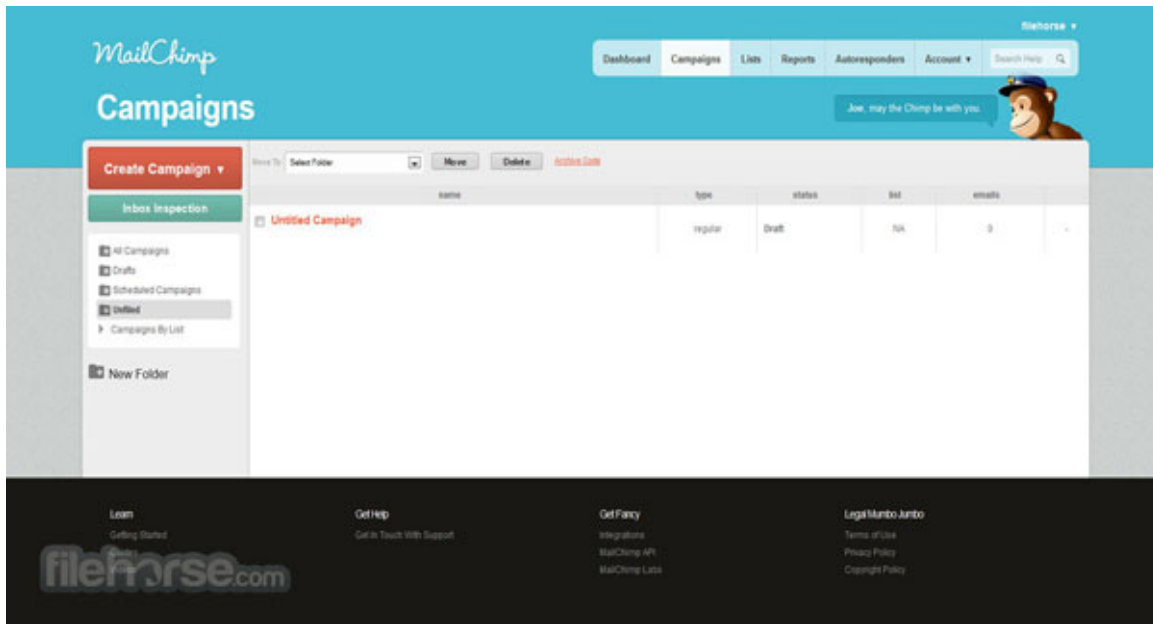

Figure 1.13: Mailchip dashboard²⁴

- Using simple design ability to make better content.
- Creating custom designs with the help of an AI assistant.
- With marketing automation, you may send personalized emails and also get up to six times more orders.
- Providing solutions for obtaining insights and analytics in a centralized location.
- Offering the free plan for small businesses.

Google Analytics

Google Analytics is a powerful digital marketing tool that can help you with a wide range of marketing decisions. You can easily maintain track of your e-commerce business and set objectives to keep you on track. It is simple for the marketers to comprehend the directions required to follow with the website upgrades and alterations using numerous data insights provided by Google Analytics. You only need to install Google Analytics on your website to get started.

The features of Google Analytics are as follows:

- Providing you with the data on the website's traffic, broken down by devices, items, pages, and also more.

- Allowing you to construct your own dimensions, metrics, and dashboards for quick data but also information access.
- Assisting you in better understanding the target audience. You will get real-time information on your website's visitors, including which pages they are looking at right now. This could help you create the more engaging landing page by giving clients the more intuitive experience.
- Enabling you to learn more about how a business is doing.
- Allowing you to share your findings using a variety of reporting methods.
- Allowing you to arrange and visualize data according to business needs.

Google ads

Google ads might very well be used by almost any type of company, whether small, medium-sized, or large. Despite the fact that some marketers say Google Ads is too expensive, it is one of the most successful digital marketing tools for expanding your business.

The features of Google ads are as follows:

- Increasing website traffic.
- Using a click-to-call button increase the number of client calls.
- Increasing the number of people who visit your store.

Canva business

If you work in digital marketing, you know how important it is to have a good design tool that helps you generate eye-catching social media posts and other marketing materials. *Canva* is a popular design tool that lets you create visually appealing marketing campaigns that you really can publish on your websites, blogs, social media accounts, and other platforms. Any digital marketing effort relies heavily on visual content. You must create appealing content in order to lure the intended client audience. Please take a look at the following screenshot:

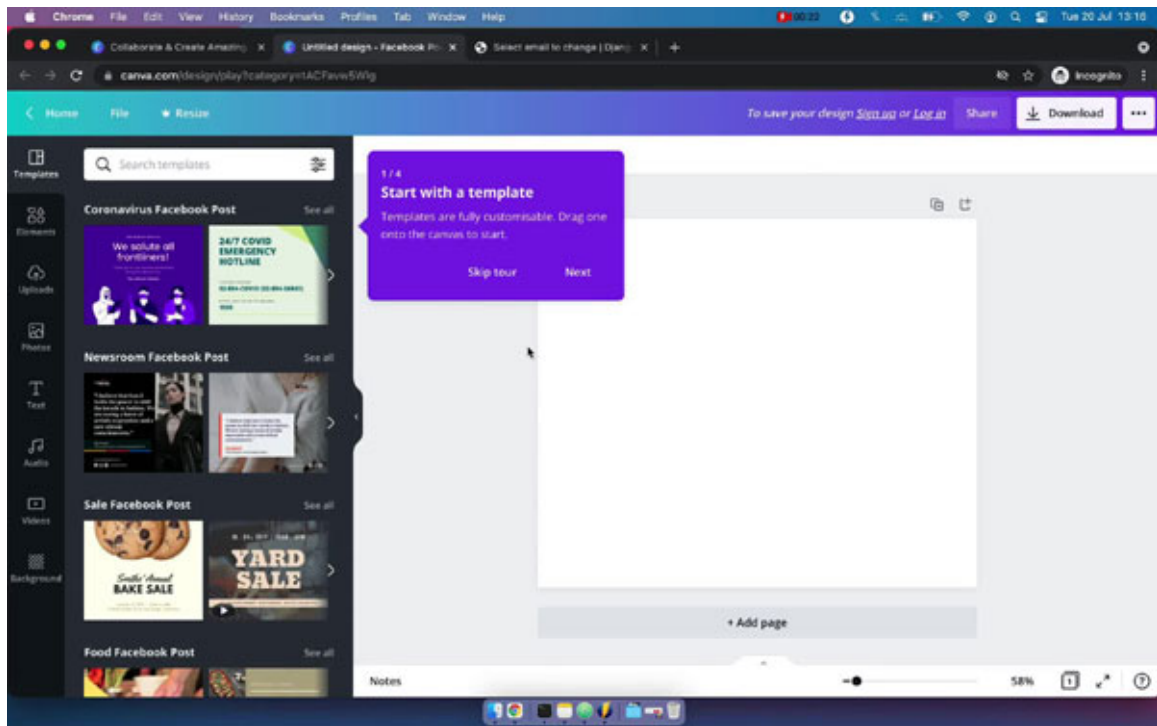

Figure 1.14: Canva²⁵

The features of Canva:

- You can modify posts and construct graphs of any type but also size using Canva.
- The tool includes a number of templates. It has a huge bank of stock photographs, images, graphics, and icons, including vectors which you can use to generate any form of visual material for the marketing campaign.
- You can choose from a wide variety of designs, such as brochures, wallpapers, CD covers, book covers, flyers, presentations, resumes, letterheads, magazine covers, postcards, presentation graphics, certificates, cards, blog banners, posters, logos, and social media graphics.

Yoast SEO

Yoast SEO is a well-known SEO plugin. It is among the most well-known and widely used *WordPress* plugins for digital marketers who want to improve the performance of their Web pages in search engine results. Yoast SEO assists with the specifics that WordPress lacks, such as sitemap submission, keyword

management, content creation, and the use of Webmaster tools, among many other things. Please take a look at the following screenshot:

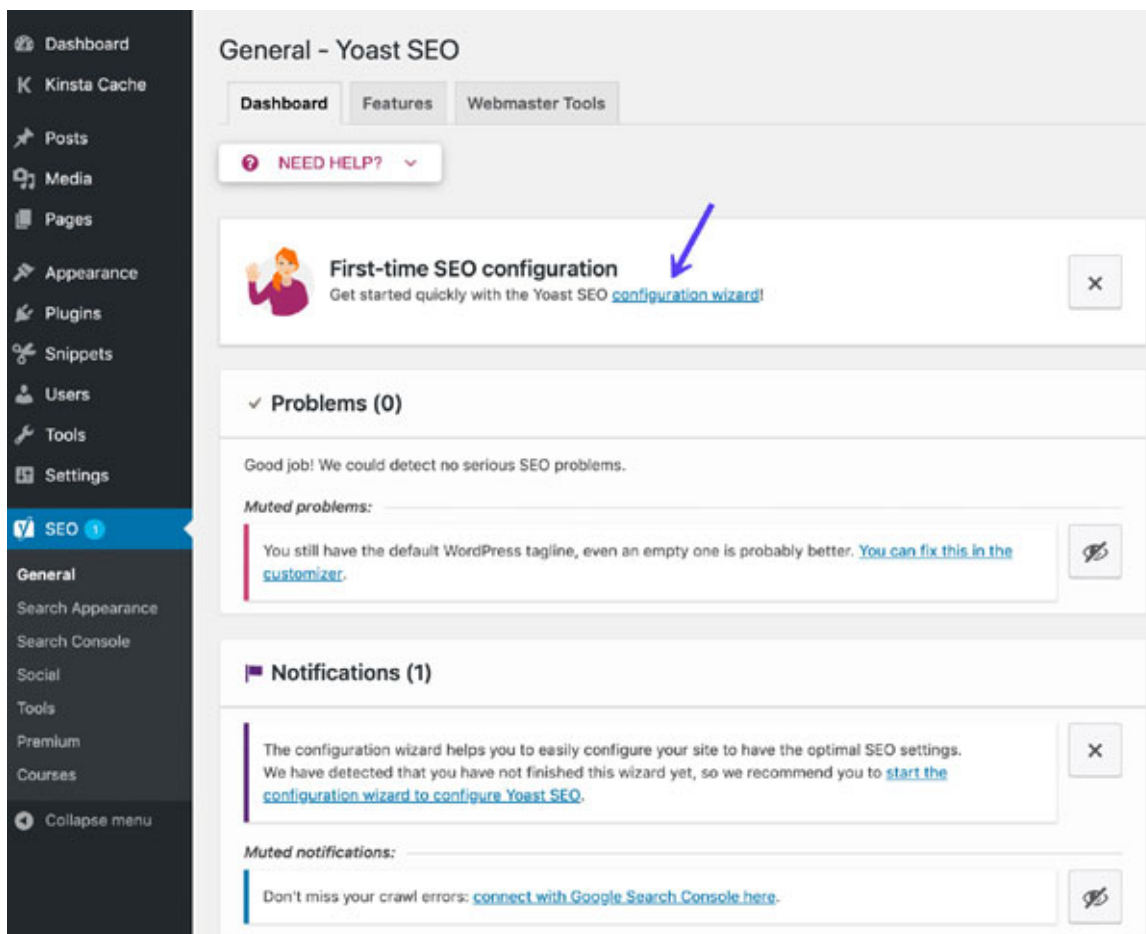

Figure 1.15: Yoast SEO²⁶

The features of Yoast SEO are as follows:

- It has a lot of features that can help you optimize your website.
- It enables you to create more engaging content for any digital marketing campaign.
- The plugin offers you accessibility to the Yoast SEO Meta box, where you can add the content's meta description and title. Furthermore, XML sitemaps do not require the installation of the third-party plugin.
- It creates XML sitemaps for the websites and sends them to the search engines automatically.

Drivers of the new marketing environment

Marketers are always looking forward, predicting the next big thing, whether for their brands or even for their customers. The following are some significant drivers in the current marketing environment: [27](#)

- **The focus of marketing would shift to mobile**

Mobile device innovation, from tablets to wearable gadgets, cell phones to smartphones, is among the most significant influences affecting the marketing sector. As such, focus changes to a smaller display, and marketers will be able to develop a more personalized relationship with clients by leveraging the promise of mobile.

- **Brand-customer relationships would be governed by transparency**

Trust is a basic requirement for a good relationship between a brand and its customers. Brands can practice transparency to build trust. Customers' expectations of transparency are increasing; thus, this tendency is likely to continue. Genuine brands will be known for "*walking the walk*" and providing genuine value. This means that businesses that have not made all of their client interactions visible are ruined.

- **The demand for quality content will continue to grow**

In an online marketing world, content, especially visual material, would rule the roost, expanding into new forms and upsetting traditional marketing approaches. Furthermore, a brand's ability to develop excellent content at a rapid pace would play a role in its success.

- **User-generated content (UGC) would be the next big thing**

As the brands began to transfer control of the brands' marketing to their customers, the power of the user-generated content would surpass that of the branded content. This means that brands would be under pressure to make a favorable impression on their customers through anything from online reviews to social media posts and blogs. Content co-creation between the brands and customers is becoming a popular trend in reaction to this type of content production.

- **Social media will supplant the Internet**

Social media will be incorporated into "*broader marketing discipline*." Most firms would fully convert its marketing initiatives to social platforms as their influence grows. As a result, social media has potential for becoming the channel, not just one of the channels.

Digital marketing strategy

The digital marketing strategy seems to be a strategy for achieving particular objectives using your company's digital marketing platforms. It might include objectives for both paid and also organic media and any of your digital platforms, such as the social media channels, content assets, site pages, or paid ads. The digital marketing plan must be tailored to your company's goals and objectives.

Creating digital marketing strategy:

- **Define your brand:** Outline or use the brand standards to define a brand and how it would emerge in your internet advertising. Take into account the brand's **unique selling propositions (USPs)**, voice, and overall value proposition.
- **Build your buyer personas:** You could figure out which one of your firms wishes to approach using customized buyer personas. Evaluate the target audience's demographics and the variables that influence their decision to choose a company, products, and services.
- **Create your SMART goals:** Set specific, measurable, attainable, reasonable, and timely goals to drive your strategy (also termed as SMART goals). Think about your company's short- and long-term growth goals.
- **Choose your digital marketing strategies:** Select the best strategy for your business. Rather than concentrating on the most popular methods, focus on the ones that would add the greatest value to your organization and industry.
- **Set your digital marketing budget:** Investigate digital marketing pricing to come up with a suitable budget for your organization. The company spends 7% to 15% of the total business revenue on Web marketing. [28](#)
- **Brainstorm your strategy:** You may ensure whether your strategy succeeds by planning ahead of time. If you are advertising, figure out how much you will spend on ads. If you are planning to be publishing material, make a content calendar.
- **Launch your campaigns:** After you have finished planning, launch campaigns across all media. Verify that all the channels are equipped with the required tracking data. For example, the Google Analytics tracking code should be displayed on your website.

- **Track your results:** You could monitor and measure the effectiveness of techniques by tracking their performance. Use Google Analytics, Google Search, Console, and Google Ads to keep track of their strategy and also their **Return on Investments (ROI)**.

POEM framework

The POEM framework is a well-known framework for developing social media marketing strategies among digital marketers. **POEM** is an acronym for **Paid-Owned-Earned Media**. Let us look just at the POEM structure in more detail.

Paid media

Paid media is the very first part of the POEM structure. It is really the most often used marketing channel. Each category includes any avenue or area that necessitates money. Most advertising, sponsorships, and also publications are classified as paid media.

Paid media, mostly in the context of digital marketing, offers a variety of methods through that you can expand your reach. Several of the easiest but also most effective ways to interact with the target audience are through paid media. You could expand your audience and establish a large consumer base by promoting their products or services on paid media channels such as *Google Ads* and *Facebook Ads*.

Television commercials, print, radio announcements, advertising platforms (For instance, Bing Ads and Google Ads), pay-per-click advertising, and search engine marketing are all instances of the paid media channels toward promoting your business. Paid media includes even specialized areas of social media, such as sponsored ads on Facebook and Instagram.

Here are some more instances of the paid media:

- Search ads
- Retargeting
- Shopping ads
- Paid influencers
- Display ads

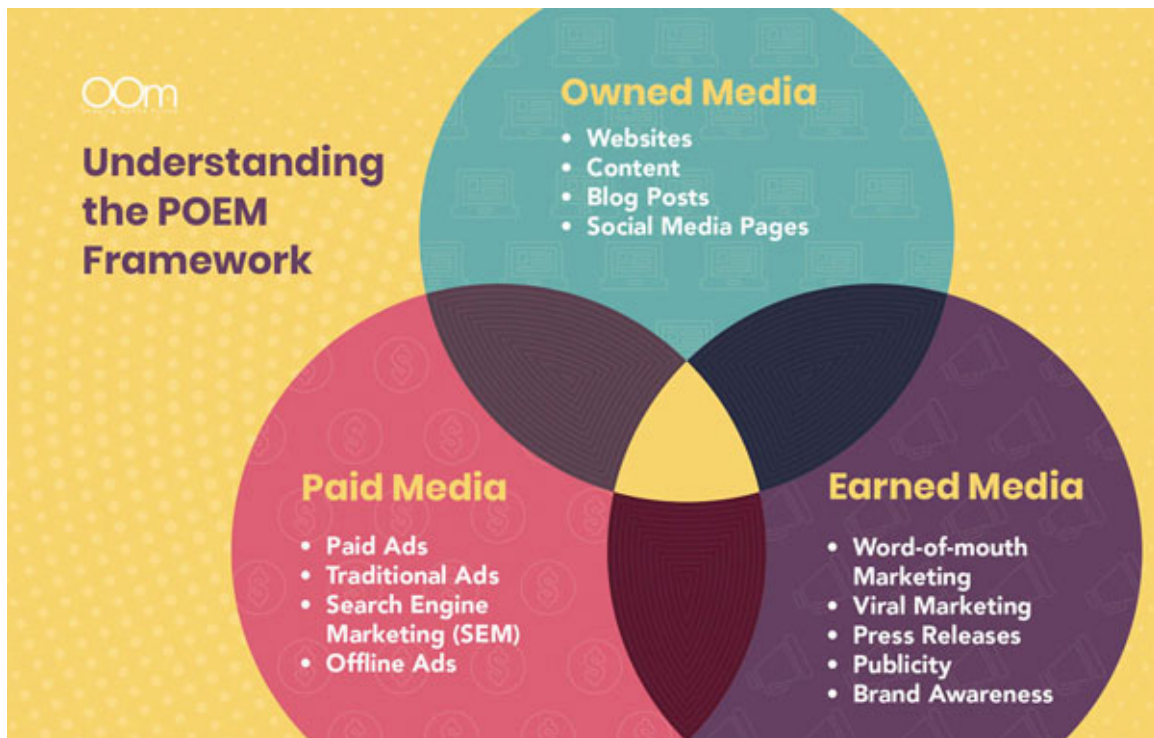

Figure 1.16: As an example, LinkedIn's homepage for grabbing the attention of the people²⁹

Owned media

Owned media seems to be the second pillar of POEM architecture, and so it pertains to everything which belongs to your company, agency, or brand. Whenever it comes to owned media, you can leverage both the assets and the belongings for marketing purposes. You possess complete control over a digital marketing platform, enabling you to promote your business in just about any way you see fit.

Owned media contains assets within your control, which include a website, blog, and other promotional products. These resources can be used to promote your products or services.

Owned media includes, for example:

- Websites
- Social media pages
- Blog posts
- Content

Earned Media

The term “*earned media*” is by far the most recent addition to the POEM framework. It relates to the exposure and recognition that your company receives as a result of natural publicity and awareness. Through third-party channels, including **public relations (PR)**, social media, and referrals, you may connect, interact, and communicate with the audience via earned media.

Earned media is classified as inbound marketing by the majority of marketers. It is a method of generating leads by disseminating useful content and ensuring conversions. Know that earned media is a powerful tool for digital marketing if you keep delivering high-quality, relevant content that also resonates with the target audience. Any impediment to the marketing efforts could prohibit your earned media from progressing significantly.

If you really want to build a reputation and authority, you must manage the earned media. If implemented right, you might examine the impact of marketing on the brand. This will help you to think about and also create better ways to attract more traffic, generate leads, and increase revenue.

Some instances of earned media are as follows:

- Word-of-mouth marketing
- Press releases
- Brand awareness
- Viral marketing
- Publicity

Digital landscape

A digital landscape refers to the entire collection of the technology, software, and content that interacts with digital advertising. Websites, computers, email, smartphones, videos, blog posts, and so on are all instances of the digital landscape. Things that exist on the internet, but are basically unrelated, such as hobbyist websites that concentrate on irrelevant themes without advertising, are excluded from the digital ecosystem. In several ways, both Facebook and Google are basic aspects of the digital landscape.

As a consequence of all potential customers’ combined behaviors, the digital world is constantly evolving. If a few of them do not work, companies propose a variety of ways to deliver advertisements. If their material does not approach

people, companies develop a variety of different types of content. In a broad sense, the digital landscape is indeed the wide-ranging use of iterative marketing.

Components of digital landscape

Even though they are all part of the same environment, it is often convenient to imagine each region independently.

Social media landscape

Sites such as *YouTube* and *Facebook* are part of the social media landscape. Such platforms are known for having a large user base and unique features.

Furthermore, because each one works independently, you will not always be able to apply what you have learned from one to another.

Marketing landscape

The digital tools and tactics you could use to sell to the customers are included in the marketing landscape.

This typically connects with social media, but it also covers other marketing methods such as blog entries, Google's services, and offline content, which intersects with or sends people to websites.

Technology landscape

The tools individuals have been using to access the internet and also the gear and software you have access to are all part of a technology landscape.

This is separate from a marketing landscape, but it contains the core marketing tools.

Media landscape

Ultimately, media landscape refers to the broad range of news and information in which you are advertising.

Since the media landscape is likely the most difficult to govern, you might have to adapt to it rather than trying to direct it.

Digital marketing models

Digital marketing models are helpful tools for organizing the efforts and extracting information wherever you formerly could not. You would, however, require a thorough understanding of the many models offered and also how they operate.

Digital marketing models are broadly divided into three categories, namely; [30](#)

- Audit models
- Planning models
- Honeycomb model

Audit models

Digital marketing audit models provide a significant framework for analyzing and improving the online presence of your organization by answering important questions such as:

- What business model is being used by the organization?
- How you can capture leads and customers?
- Which channel of marketing is more effective for your organization?

Forrester's 5Is

This examines a person's level of involvement, connection, closeness, and influence with the brand through time.

Ahead of releasing the 5I model, Forrester conducted research that led them to the conclusion that the traditional marketing funnel was dead; hence, they proposed "*engagement*" as a new metric. In this, the 5Is are basically a measure of engagement that focuses on five specific elements that begin with the letter "I". These are as follows:

- Involvement
- Interaction
- Intimacy
- Influence
- Individual

There is no such thing as an easy path to the sales funnels, but the more a client or user is "*engaging*" with your brand, the better the result for your business.

Let us take a closer look at the 5Is of a model.

Take a closer look at each of the components to have a better grasp of what they all imply.

- **Involvement:** The goal of including the customer in the company's brand, products, or services is referred to as involvement. Page views, visitors to the site, time spent, and other such metrics are often used to gauge this.
- **Interaction:** There are a variety of ways to interact with a person, such as purchasing an item, signing up for such an email, or commenting on an online social network. Customers' interactions with a firm or brand are a frequent way to gauge this.
- **Intimacy:** To be intimate, one must be able to convey their feelings via words and deeds. How one thinks about the product review or the remark published on the website of the social networking service is an excellent illustration.
- **Influence:** A person's ability to positively influence the opinions of others about the products or services is known as their "*influence*." Similarly, brand loyalty and word-of-mouth marketing, and recommendations to friends, family, and acquaintances are all examples of this phenomenon. Share rates on social media, reviews, and mentions on the internet are often used to gauge this.
- **Individual:** To put it another way, the approach places more emphasis on the individual than a group or community.

Lauterborn's 4Cs

This is the revised version of 4Ps with the customer focus that can be used for internal audits and competition comparisons.

Advertising is typically used by companies that offer goods or services to contact prospective clients. The 4 C's for marketing communication and Lauterborn's 4 C's for marketing have been established by marketing experts in order to assist firm's promotion successfully.

Lauterborn's 4 Cs include:

- Consumer wants and needs versus product
- Cost to satisfy versus price
- Convenience to buy versus place

- Communication versus promotion

Four C's of Lauterborn are listed as follows:

- **Consumer wants and needs**

In order to better understand the desires and requirements of your customers, you must undertake market research, develop customer profiles, solicit feedback, and keep tabs on the social media channels relevant to your business. This is termed as “*customer value*.” Instead of focusing on the firm, this component encourages a customer-first attitude.

- **Cost to satisfy**

There is more to the cost, in Lauterborn's opinion, than merely the purchasing price. When a customer buys a product from a shop or online, he or she spends a considerable amount of time learning how to use it, including purchasing additional products like online subscriptions or accessories to guarantee that the product functions as intended.

- **Convenience to buy**

When it comes to the ease of the product's accessibility for a consumer, everything from shop hours and website navigation to whether or not customers could quickly locate information or an employee who really could answer their queries falls under the umbrella of convenience. Observe what your customers need to complete a transaction and experience your business, whether digital or real.

- **Communication**

Instead of depending on one-way advertising that gets no reaction, the communication strategy stresses a two-way connection with customers. Responding immediately or listening to customers' comments might help organizations build a closer relationship with their customers. The company's clients know that they are listening and responding to what their clients say when they integrate user's feedback.

Ten Cs of marketing

The 10 Cs are a framework for evaluating both the internal and external online marketing efforts.

Every one of the 10 Cs is taken into account while creating an internet marketing strategy. Whether internal or external, this may be used to examine a company's website and other marketing materials to see how well they are

being maintained. In the center of attention is the client, and each piece of the puzzle is examined to determine whether it fits the customer's demands. [31](#)

- **Customer**

The client must be in the middle of the model. As the internet allows for more focused marketing, this must be taken into consideration, for instance: how well the company knows its consumers. User behavior is altering rapidly, and they want quick and also transparent communication at every level of sales procedure if they cannot find you online.

Your position today might well be solid, but with the rate of change, it is not likely to secure future survival. Webrooming is one of the newest of these growing behaviors.

- **Corporate culture**

Consumers who shop online are more concerned about how a company's culture or brand image is perceived by the public. Consider the prominent apparel labels such as *Marks & Spencer*, *Gap*, and also *H&M*, which offer jackets decorated with the Angora rabbit fur, which is harvested in an unethical manner. This was uncovered and quickly spread throughout television and internet video network, leading to a regulation change. Transparency and honesty have become more important components of the modern corporate culture.

- **Convenience**

Consumers now have more sway over shops because of the convenience of being able to purchase whenever and from wherever they choose. Mobile and tablet technology have made shopping easier for customers, and we can do shopping on the phone while from the office or waiting for the meeting to begin.

- **Competition**

Competition and the new entrants now have the ability to be disruptive in a setting where it is difficult to forecast the next step and changes happen quickly.

Twenty years ago, none of the following five global giants existed: *Amazon*, *Apple*, *Alibaba*, *Facebook*, and *Google*.

- **Communications**

New types of inbound marketing, like organic SEO and social media, have emerged as a result of digital media and technology. The two-way

but also multi-party discourse rather than the old one-way business communication has emerged in this new communication environment.

- **Consistency**

Delivering the same service across all channels is what we mean by “*consistency*.” As a result, the same high standards and levels of customer care must be applied regardless of where you make your purchase: in-store or even over the phone. As a consequence of bad service being acknowledged in the shop, consumers sometimes turn to the internet to seek remedies.

- **Creative content**

Companies were updating their websites on a far more sporadic basis whenever *Richard Gay* (“*Richard Gay is a lecturer in Direct Marketing at Newcastle Business School, Northumbria University*”) first came up with this strategy. Several organizations have updated their content on a regular basis thanks to the growth of Google’s algorithms, a recognition of the worth of content marketing, including improved technologies.

- **Customization**

Customers may personalize their online experience on a plethora of websites. For instance, when I return to Amazon, it greets me with a smile, informs me of what is really new, and provides suggestions for further goods to purchase based on what it terms “*Driven by your Buying Patterns*.” Greater personalization, or “*mass customization*,” has been made possible by more user-friendly technologies. With this list, *Amazon* makes it clear it is based on little evidence, but it does not come off as threatening.

- **Coordination**

The coordinated multichannel service is one that ensures a click-to-delivery customer experience.

- **Control**

It is the last of 10Cs, which focuses on how online shopping and also browsing may provide more insight and measurable results.

It’s now possible for marketers to test various concepts and discover which gets the most engagement and/or conversion using Web analytics tools such as *Google Analytics*. The use of customer feedback tools may also promote facilities that are more customer-centric.

Planning models

Digital marketing planning models provide significant frameworks for digital plans, audits, and strategies.

6Cs of customer motivation

This is the valuable marketing strategy and the online customer communications approach for creating your website or the online community, originally established by *Dave Chaffey* (*Dave Chaffey* has assisted tens of thousands of companies to strengthen their digital marketing. The *SmartInsights.com* website, which offers digital marketing strategy guidance, was co-founded by him. He is well known for his practical marketing advice).

Changing the language we use to define and characterize the client purchasing process is one of the finest ways to shift our mindset. To better represent the current context, here are the six new important measurable steps to consider when creating, executing, and evaluating marketing's contribution to the pipeline of opportunity:

- Contact
- Connect
- Conversation
- Consideration
- Consumption
- Community

Let us take a quick look at each one in turn.

- **Contact**

As we say in Texas, “*just nice and dandy*” is fine, but what truly counts is making a connection with someone. Even if your firm and its goods or services may be well-known to your potential customers, you might be wasting time and money until they show a certain degree of interest. You require more than just a general sense of market or consumer base; you need genuine contact information to make contact. For some companies, the process of building the contact database is in its infancy. Others might be adding to and managing an already large contact database. A number of persons who provided you their contact details and consent to contact them may, however, be “*counted*.” Consider how much each contact

costs to acquire, how much it costs to retain, how many conversions there are, and how many connections there are between contacts.

- **Connect**

At the very least, the virtual handshake and the formation of some kind of rapport are required to create a relationship. The very same metrics we used to track contacts could be used to gauge the effect of marketing on building relationships: an overall number of connections created, the cost of acquiring and maintaining those connections, and also the rate at which those connections turn into actual conversations. Each stage will have its own version of such measurements.

“A length of pump handle is not a reliable indicator of the depth of a well”. Even if you establish a connection, it does not indicate you have a client or even someone willing to indulge in conversations beyond a courteous and casual visit to borrow something or yack about the weather. In order to become a follower, you need to do things like download information from the website, sign up for the newsletter, and attend webinars. In order to get to know each other, you must have a dialogue. When someone shows more than a casual interest in your product, this is the first step.

- **Conversation**

Prospect or customers, and you are in constant communication. Both sides are actively involved in the conversation. This is the point at which things really get rolling. A talk or series of conversations is required to attract a consumer who demands careful consideration before making a purchase. To go forward, you must first have a talk and then analyze your options.

- **Consideration**

“There are no biscuits just since you could put the boots in an oven”. This idiom from Texas perfectly illustrates the difference between having a discussion and taking something into account. Having a chat with a potential consumer does not always indicate they are interested in buying from you. Customers who are giving your offer and business some consideration, are doing so because they are being diligent and assessing their choices. That is really the time when you will use a variety of marketing tools to assist your consumer or potential customer develop their preference and inclination toward your service. You can tell whether

you have a sale-ready opportunity at this point and should share it with sales.

- **Consumption**

It is no secret that marketing plays an important part in the sale of goods and services, but that job has not gone away just because the opportunity has been transferred to sales. As a result of consumption, marketing could now monitor the entire conversion rate and time, cost from contact to the client, the cost of acquiring, and marketing's "*win rate*."

- **Community**

In the beginning, it had been a pity to cease investing. It is crucial to have a loyal consumer base. Our most loyal customers, too, are our best advocates. Marketers need to concentrate on building their customer community in the age of **customer-generated content (CGC)**, social networks, blogs, and also product evaluations. For example, you may use social networks like *Facebook* and *LinkedIn* to generate a community of consumers who can interact with one another.

Hofacker's five stages of information processing

When it comes to constructing online communities, making online advertisements, planning web development, and/or developing online customer communications, this paradigm is still useful.

Plan, create, test, and evaluate online advertising but also websites using Hofacker's five steps as a guide.

1. **Exposure**

Make sure that the most important parts of your website are prominently displayed. Consider employing cost-per-thousand-impressions or call-to-action ads rather than pay-per-click advertisements. As a consequence, such advertising formats have the ability to boost your brand's visibility and reach a wider audience.

2. **Attention**

The collecting of data from several social media platforms makes it simpler to capture the attention of website visitors. Personalized banner ads on the social media websites like *LinkedIn* and *Facebook* get more attention since they are more relevant and contextualized. Consider the

title carefully in order to get the most attention possible. As an example, take a look at this one-sentence ad at the top of LinkedIn's homepage.

A screenshot of a LinkedIn advertisement banner. The banner has a light blue background with a thin dark blue border. The text inside the banner is in a dark blue, sans-serif font and reads: "Are You A Female VP? - Apply Now To See If You Qualify For The Who's Who of Professional Women!".

Are You A Female VP? - Apply Now To See If You Qualify For The Who's Who of Professional Women!

Figure 1.17: As an example, LinkedIn's homepage for grabbing the attention of the people³²

3. Comprehension and perception

A website's navigation must be intuitive for its users. Site maps and breadcrumb trails, which are now widespread, are discussed in detail by *Hofacker* in his book on online design. Web users should be able to grasp and absorb pertinent information quickly and readily if the “*don't make me think*” approach is followed. This allows visitors to read a website and get engrossed in the content, paving the way for the next stage in their journey.

4. Yielding and acceptance

Websites and advertisements must be very clear. Ads that require the viewer to digest an excessive amount of information are less likely to somehow get click-throughs. With only a few seconds to create an impression and acquire the visitor's trust.

5. Retention

Make sure that the customer who visited your website for buying a product or service and left without making a purchase, is retained. Retention can be increased by using any of the following retargeting options:

- Ad retargeting or ‘Follow-me’ marketing
- Emails saying you left something in your cart
- Retaining product in the basket for more time

RACE planning

RACE is a set of four internet marketing actions meant to assist firms to keep clients engaged throughout the customer journey. In addition, there is an initial phase of the plan that focuses on defining an entire integrated digital strategy, identifying goals, and establishing governance.

- **Reach:** With Reach, you can increase traffic to the main website and additional online properties, including microsites and social media pages, whereas also raising awareness of your company's brand, goods, and services on the other websites and in traditional media. Over time, it is all about maximizing the number of interactions you can have with your audience via sponsored, owned, and earned media.
- **Act:** With Act, the primary goal is to produce online leads which can subsequently be maintained on the "road to buy". Getting customers to take the next step in their customer journey whenever they first arrive at your website or the social network presence is all about convincing site visitors or prospects to take that next action. It might imply learning more about the business or its goods, doing an internet search to locate a certain item or going through a blog post.

*Figure 1.18: RACE planning*²³

- **Convert:**

Since RACE is a multichannel or omnichannel marketing strategy, this stage is focused only on converting leads into sales. It is all about encouraging your audience to take a certain crucial next step, whether via online e-commerce transactions or physical channels, that ultimately results in paying consumers.

- **Engage:**

Build long-term relationships with customers to encourage repeat purchases through messaging on your website and social media presence, email, and direct interactions in order to increase client lifetime value. Repeat behaviors, like repeat sales and social media content sharing, may be used to gauge this.

- **Strategy models:**

It is the primary goal of the marketing strategy model to provide tools as well as insights for the development of the marketing strategies.

4Cs for marketing communications

This marketing strategy approach can help you establish your online value proposition. The following are the four Cs of marketing communication:

- **Clarity**

Clarity refers to the degree to which your brand's or the product's message is concise and easy to understand. To be effective in today's fast-paced marketing environment, you need to ensure that your message is clear and concise in order to capture the attention of a prospective consumer.

- **Consistency**

A key part of any marketing plan is to maintain uniformity in messaging throughout your firm. The message and tone you want to convey to consumers should be clearly communicated to your whole staff, whether it is professional and courteous or a little bit more lighthearted.

- **Credibility**

Customer trust in your organization, brand, good, or service is bolstered by a strong sense of credibility. Once you have established a good reputation with your clients, it is critical to keep it by consistently demonstrating that your business is trustworthy and deserving of their business.

- **Competitiveness**

Shows your consumers you have the competitive edge over your competitors in your sector. In other cases, this might indicate that your firm is superior than the competition or that it provides a service or product that no one else does.

McKinsey's consumer decision journey

This digital paradigm examines an online customer journey from consideration through purchase, developed by a prominent US consulting firm.

Consumers go through a number of processes when purchasing a product or service in order to determine which firm best meets their requirements. A consumer's decision-making process includes the following steps:

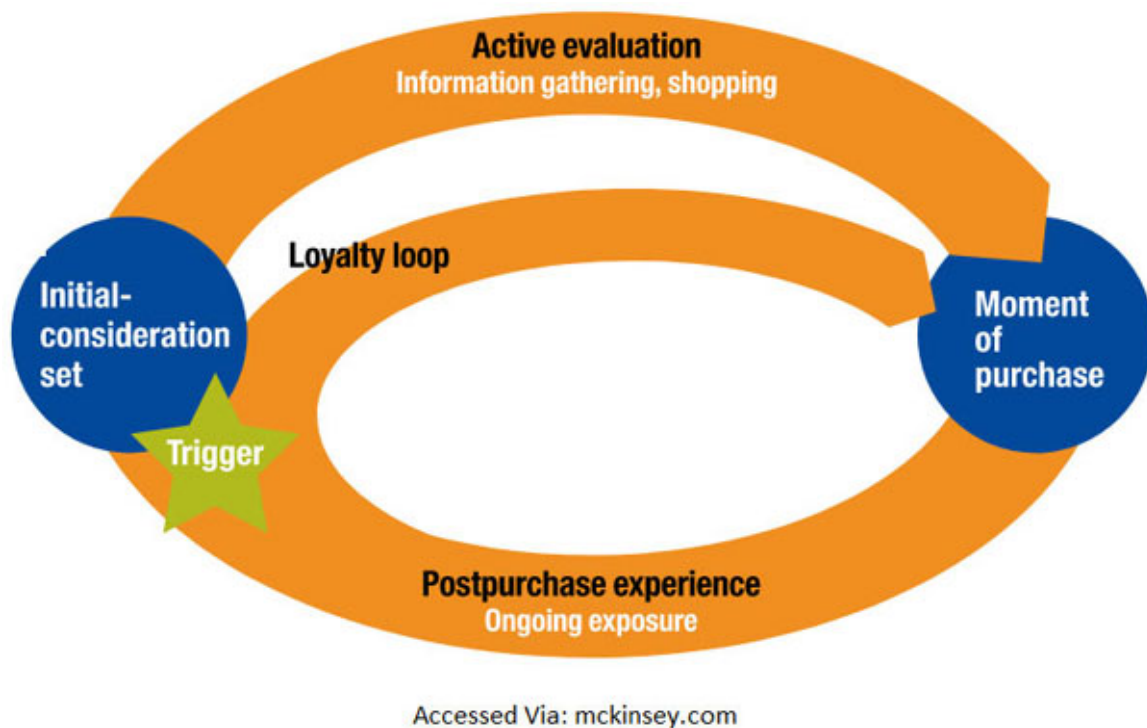

Figure 1.19: McKinsey's consumer decision journey³⁴

- **Trigger:** When a person realizes they have the problem and require a company's products or services to fix it, this is referred to as a "*trigger*" or "*stimulus*."
- **Initial consideration set:** When making a purchase, a person focuses on their first consideration set or the companies that come to mind first because of brand recognition.

- **Evaluation:** Third, consumers evaluate several brands to see whether one provides the features and benefits they are looking for.
- **Buying:** Finally, the customer makes a final decision based on the facts they have collected from their research.
- **Ongoing exposure:** After making a purchase, the customer develops expectations about the post-purchase experience, which informs their future buying decisions.
- **Loyalty loop:** How satisfied consumers become brand champions are determined by how satisfied they are with the products and business.

The honeycomb Model

The honeycomb model is indeed the paradigm for defining social media usage for organizations, developed by a group of Canadian academicians.

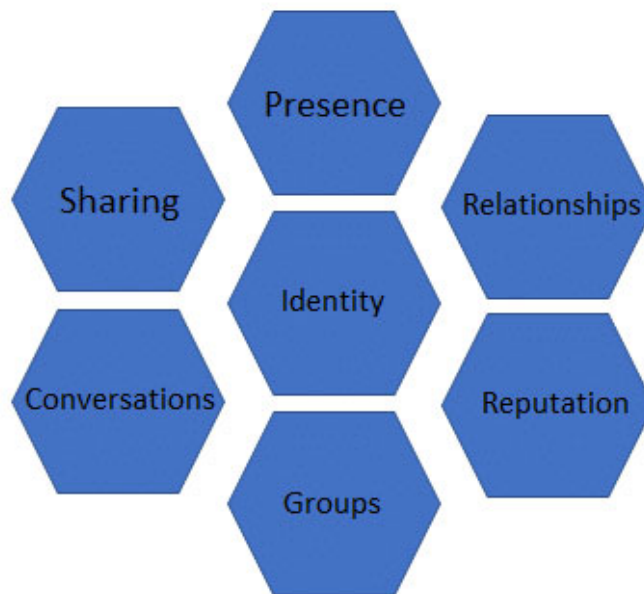

Figure 1.20: Honey Comb model³⁵

Each of the following seven blocks shows a different facet of how social media is used:

- **Sharing:** Information interchange, distribution, and reception by users.
- **Presence:** The level to which individuals are aware of the presence of other individuals.
- **Relationships:** This is a measure of how closely users are linked.

- **Identity:** The degree to which the user's identity is revealed.
- **Conversations:** The degree to which users interact with one other.
- **Reputation:** Users' awareness of the social position and content of the others.
- **Groups:** The level of order and community among users.

Marketers may use the seven building pieces separately or in combination to better understand their social media activity, target audience, and the broader social media ecosystem.

Conclusion

“Digital marketing” is used to contact a specific audience, analyze their needs, promote products and services, and raise brand awareness. Digital marketing uses digital media, as with social media or websites, whereas traditional marketing relies on traditional media such as magazines and newspapers.

The appropriate internet strategy could make a big difference in how well you market and sell your products. Advertisers can use the internet to display adverts that have the ability to approach millions of people across the world. Artificial intelligence is a sophisticated system that learns by analyzing big data on a particular field or topic. It is cost-efficient, precise, and very effective. Sixty percent of internet users are using an AI chatbot to answer questions on apps and websites. Digital marketing models are helpful tools for organizing efforts and extracting information.

The POEM framework is a well-known framework for developing social media marketing strategies among digital marketers. Each category includes any avenue or area that necessitates money.

Digital marketing is used to contact a specific audience, analyze their needs, promote products and services, and raise brand awareness.

In the upcoming chapter, you will learn about the challenges and opportunities of internet marketing. The upcoming chapter offers a thorough discussion on the impacts of digital channels on integrated marketing communication, email marketing, viral marketing, interactive advertising, and online PR management.

Key terms

- **Digital marketing:** Advertising a product or service on different electronic media.
- **Traditional marketing:** Promoting a product or service on traditional media such as radio, TV, newspaper, out-of-home advertising, and so on.
- **NFT:** Non-Fungible Tokens (Electronic assets that one could trade)
- **Infor-graphics:** The visual representation of facts that attempts to quickly convey a message.
- **SMART Goals:** Specific, Measurable, Attainable, Reasonable, and Timely goals.
- **POEM:** Paid, Owned, and Earned Media
- **Digital landscape:** Collection of different digital marketing channels such as search engines, social media, mobile marketing, and many more.
- **Digital marketing models:** Tools for providing frameworks for planning, strategy, and audit.
- **Webrooming:** A term/slang used for the common behavior of customers of purchasing offline after searching and researching the product online before purchase.

Questions

1. Why will you prefer digital marketing over traditional marketing?
2. What are the various fields in digital marketing? Explain in detail.
3. Explain in detail the POEM framework.
4. What are the recent trends in digital marketing?
5. What is Yoast SEO, and also explain its features?
6. What is the digital landscape and its components?
7. What is the role of the internet in the field of digital marketing?

Class exercise

Assume yourself as a digital marketer:

1. Identify POEM for marketing an offline grocery store.
2. Identify POEM for marketing an online grocery store.

3. Prepare a plan for digitally marketing products of a well-established automobile giant which are marketed traditionally till now.
4. Analyze the present status and future scope of digital marketing in India.

CHAPTER 2

Internet Marketing

Introduction

Internet marketing is a type of marketing in which marketers make use of the internet to promote their goods and services to online customers. It can help marketers in building better relationships with the customers and generate new leads by using a combination of online strategies such as content marketing, email marketing, social media marketing, pay-per-click advertising, and many more. Content marketing strategies such as blogs emphasize on sharing relevant and valuable information with potential customers. Marketers can use the potential of internet marketing for building brand awareness, Web traffic generation, lead generation and conversion, and improving customer satisfaction.

Structure

In this chapter, we will learn about the following topics :

- Internet marketing
- Digital marketing framework
- Digital marketing mix
- Impact of digital channels on integrated marketing communication
- Email marketing
- Online PR
- Interactive advertising
- Online partnerships
- Viral marketing
- Blogs

Objectives

The reader will be able to learn about internet marketing, various opportunities provided by internet marketing, and challenges faced by marketers while using the internet as a marketing medium. **Plan, Implement, Execute, Analyze, Report, and Measure (PIEARM)** a six-step digital marketing framework will help the reader to understand the strategic planning for a successful online marketing campaign. After reading this chapter, the reader will be able to manage online PR. This chapter offers insight into various components of internet marketing, such as content marketing, email marketing, interactive advertising, and viral marketing.

Internet marketing

Internet marketing is built on the foundation of tracking tools and results that are not only used to promote goods but also services through the internet. It has a larger variety of marketing mediums than conventional advertising because of the additional networks and marketing machinery accessible over the internet. Whatever the size of your business, these are the welcome supplement to more traditional kinds of advertising. Regardless, even if companies continue to use traditional marketing methods such as direct mailing, advertising, and personal contacts, internet marketing provides a whole new dimension to a marketing mix. Please refer to the following figure :

Figure 2.1: Internet marketing¹

For small companies, internet marketing is perfect since it is scalable, cost-effective, and can be used in a variety of industries. The increasing use of electronic media, specifically the internet, for marketing purposes has contributed to the birth of internet marketing, e-commerce, and so on (see [Figure 2.1](#)). Using the internet for marketing purposes, there are many similarities between Web and search engine marketing ; thus, they might be contrasted on the basis of performance. Internet marketing is defined as the strategies used for advertising company goods and services using online means. Compared with traditional commercial advertising, the internet offers more networks and marketing resources. Internet marketing encompasses all company's activities that aim at increasing awareness of its new business, preserving its current operations, and creating a distinctive brand for its goods^{2,3}. Please refer to the following figure :

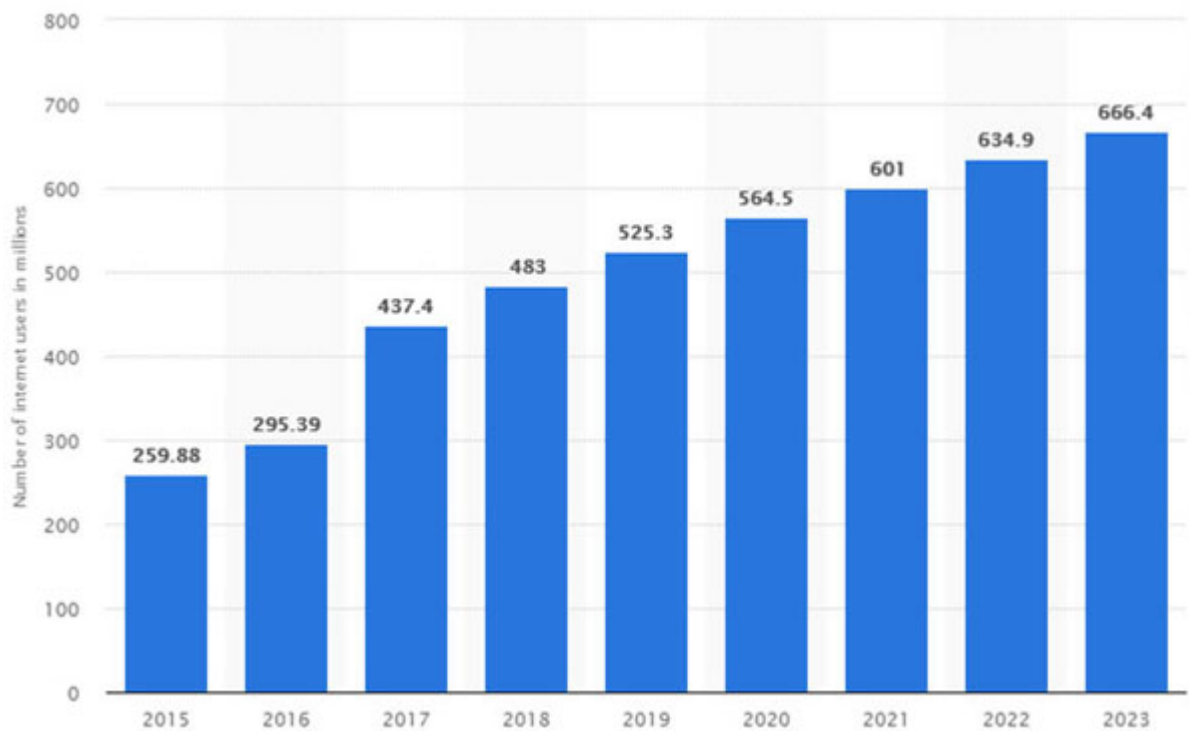

Figure 2.2: Growth of Internet users in India⁴

[Figure 2.3](#) illustrates the increase in the number of social media users in India. It is predicted that by 2023 more than 445 million people in India will be using one or other social media platform :

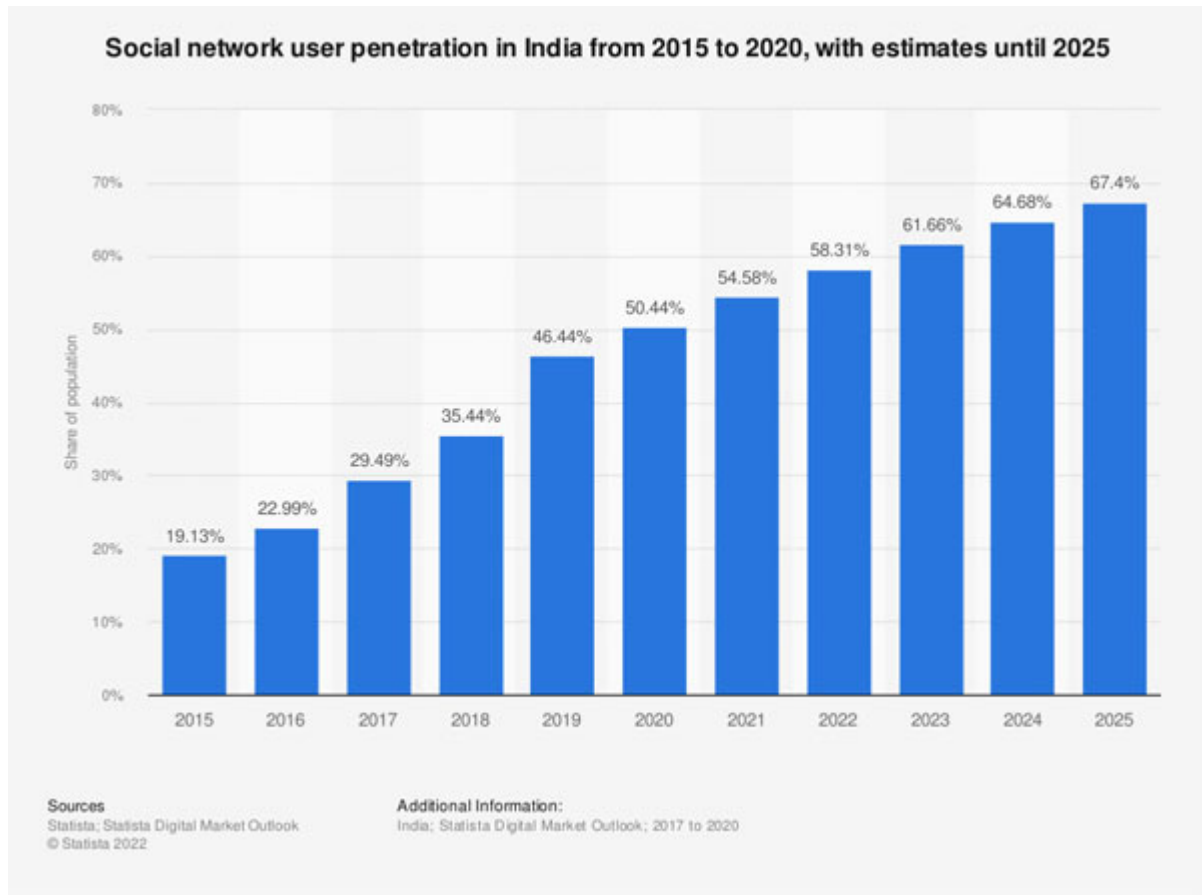

Figure 2.3: Growth of social media users in India⁵

Opportunities for internet-based marketing/advertising

Internet advertising provides a wealth of opportunities for boosting the productivity of companies online. With the aid of internet marketing, companies of all sizes might well have access to the world's biggest marketplace at a fraction of the expense of traditional marketing methods:

- **Worldwide reach:** The Web is accessible from any location in the world with an internet connection. This permits the exploration of new markets and the challenge of the competing world with very little expense.
- **Lesser cost:** It is probable to reach the correct clientele for a fraction of the expenditure of conventional marketing tactics with a successful internet marketing strategy. It is stress-free to display how an active

activity has truly been with respectful, quantitative result advertising via emails or banner marketing. Customers' reactions to the ad might well be studied in great detail.

- **Round-the-clock marketing/advertising:** Even when a firm's office is shut, buyers might learn about goods they offer online.
- **Personal exposure:** Whenever the user's record is connected to the website, they can obtain targeted offers anytime they visit a site. The more they purchase from you, the more information you might add to your client profile and more efficiently market to them.
- **Speed:** Emails are delivered straight to the appropriate recipients.
- **More interesting promotions:** Internet marketing allows you to develop collaborative movements using graphics, music, and also videos. You might play games or host a contest with the consumers in order to persuade them to attend your events.

Challenges of e-marketing

Since the Internet boom of the late 1990s, Web-based businesses have proliferated like weeds. At a rapid pace, not only the internet's range but also its capabilities are growing. Notwithstanding these benefits, internet marketing comes with its own set of distinct problems. Hence, online companies confront a different set of issues than conventional brick-and-mortar firms do. Many organizations face some issues, and the following are among the solutions which have already been put in place to address them: [6](#)

- **Marketing integration:** In most large marketing initiatives, both internet and offline networks are used. Email marketing, Web marketing, and internet marketing as a whole should have specific, measurable objectives as part of their entire marketing strategy.
- **Security and privacy:** People are apprehensive about giving personal information on the internet since they do not even understand why it is necessary to have so much confidence in a particular brand. This is particularly true when it comes to corporations that gather the personal information of potential customers. Smart strategy and cutting-edge security solutions must be used in order to address this issue.

- **Impersonal service businesses:** The lack of focus on the little things, online businesses may use tactics like emailing or putting material over the website to address client questions that can be handled electronically. Clients may find this very impersonal. Whenever it comes to selling goods online, merchants must create well-structured checkout processes. Surveys and other concerns requiring immediate attention from a human being might also benefit from the appointment call services.
- **Improving brand awareness:** Increasing brand awareness is a big problem for companies that use the internet to sell their products and services. Unlike conventional means of advertising (such as radio, television, billboards, and print media), clients might block internet ads, giving them more choice on whether or not clients have seen an ad. As a consequence of this, online media companies are rethinking their advertising methods.

Digital marketing framework

Documentation explaining how marketing operates along with the criteria and touch points may be summarized as the marketing plan. You will not be missing anything all through the long operation if you do it this way.

From communication to strategic planning to ultimate goals, digital strategy frameworks encompass everything. You must know the business's objectives and priorities in order to develop the model that fits those requirements. The following model may help you build your personal digital marketing strategy.

PIEARM

It is a six-step technique for effectiveness in digital marketing campaigns: **PIEARM** stands for **Plan, Implement, Execute, Analyze, Report, and Measure**.

Planning

Planning includes:

- SMART goals

- Market positioning
- A SWOT analysis
- Market segmentation
- Building a buyer persona
- Search intent analysis

SMART goals

Specific, Measurable, Attainable, Relevant, and Time-based objectives are referred to as SMART goals. This kind of goal has explicit objectives and milestones that can be tracked and measured.

Specific: There must be a clear definition of the digital marketing objectives. If you really want to boost sales or the traffic to your website via digital marketing, be explicit about your objectives.

Measurable: Data that may be quantified must be readily available for tracking the progress of digital marketing initiatives. Achieving goals such as boosting brand recognition or enhancing product awareness is impossible to track since they are subjective. Measurable objectives include, for instance, creating twenty new email newsletter signups or thirty new contacts from the leads per month.

Achievable: While it is OK to have high expectations for digital marketing initiatives, you must also set targets that you know can be achieved in the short term. As a small business owner, you cannot expect to become a Fortune 500 corporation in a day.

Relevant: Digital marketing objectives should be tailored to your company's unique requirements since no two organizations have the very same demands. In the same way that the real estate firm could want more leads from potential house purchasers, an online clothing retailer might wish to focus on ladies.

Time-Based: Digital marketing goals need to be time-based, as well. For example, attracting thirty new clients does not define a time frame. In order to reach a goal, it requires time. It is also ineffective to gauge achievement without a time limit.

A successful digital strategy relies on setting SMART objectives.

Market positioning

A company's capacity to influence customer perceptions of the brand or the product in relation to rivals is referred to as market positioning. Positioning in the market aims to develop an item's image or identity such that customers perceive it in a specific manner. Please refer to the following figure:

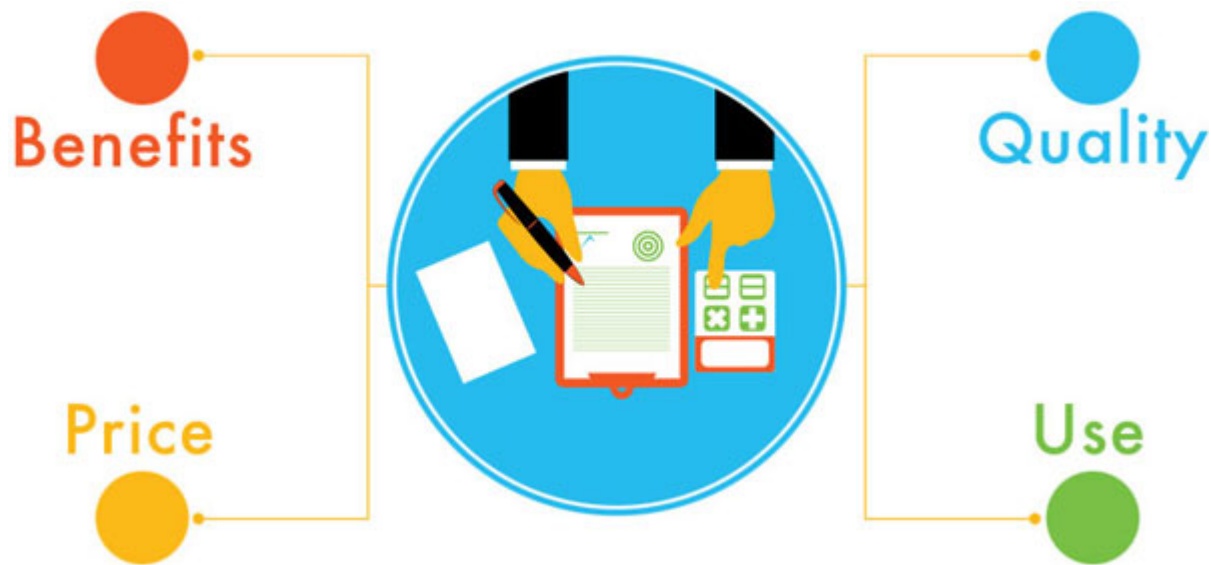

Figure 2.4: Market positioning

Benefits: You need to think about what distinguishes your product from the competition in terms of the features and advantages it offers to the customer. Associating the product with certain features or benefits can be very fruitful.

Price: Do you have a lower price point than your competition? So, you can promote your brand or goods by tying them to low prices.

Quality: What distinguishes your product from that of your competitors? Associating the product with excellent quality.

Use: Is your product more versatile than your rivals' products? Marketing the brand/product by tying it to a particular application.

Consumers' opinions of a company are shaped in part by the company's position in the market.

SWOT analysis

Strengths, weaknesses, opportunities, and threats (SWOT) analysis is a framework used to evaluate a company's competitive position and to develop strategic planning. SWOT analysis assesses internal and external factors, as well as current and future potential.

Strengths

These are the aspects that contribute to the success of your company. Ask yourself what your firm excels at and how it might be used to benefit your future endeavors.

Weaknesses

Your enthusiasm for your company's concept is admirable, but you must also maintain a sense of perspective. Look for internal weaknesses in the potential company and figure out how to reduce or remove them.

Opportunities

Possibilities are things you could do outside of your company that have a beneficial impact on it. Examples include the lack of rivalry in your niche, a rise in the size of your target market, and advancements in technology that make it simpler or cheaper to supply your product.

Threats

If your prospective company is threatened by external causes which are beyond your control, or if a local real estate market is strong or the economy is weak, a home remodeling company's profits may climb or decline.

A great digital strategy is built on the foundation of the SWOT analysis.

Market segmentation

It is important to segment your market to identify your ideal customers and target audience. Market segmentation may assist you to target only the individuals most inclined to become pleased clients of your firm or passionate users of your content. Segmenting a market is done by dividing it into smaller groups that have similar traits. You may base a section on one

or even more attributes. It refers to the practices of dividing audiences into groups based on observed variations in personality. A person's age, marital status, sex, family size, employment, and also education level are some of the attributes that might be used to determine their eligibility. Splitting up an audience in this manner enables for more finely targeted marketing and individualized content.

Build buyer personas

The buyer persona is the fictional portrayal of your ideal target market's demographics and behavior. Researching and recording the history, challenges, and ambitions of your potential customers is necessary for creating buyer personas. A customer's advantages and objections must be clearly defined in order to avoid misunderstandings.

By creating buyer personas, you can understand your target audience better. It aids in the creation of a proper message that really is resonant and leads to consumers being converted.

Search intent analysis

In order to truly comprehend your target demographic and the market, you have to look at search intent. Your search campaign will be more successful and efficient if you understand the searcher's intention behind the target terms.

Implementation

Implementation focuses on the creation of content for a variety of platforms, including websites, ads, videos, photography, social media, and far more.

Execution

In order to assist our clients to grow their businesses, we use a combination of marketing automation, smart site design, social media, SEO, and paid advertising.

Analysis

Data analysis is the process of sifting through the information gathered to discover new insights:

- Users
- Business and market opportunities
- Evaluation of performance

Reporting

Using this information, we then create bespoke summaries to emphasize certain key performance indicators and give clear performance dashboards that are simple to read and comprehend.

Measuring

It is how we assess the success of the campaign in terms of the marketing ROI. In light of these findings, we provide suggestions for improving the strategies, procedures, and outcomes. Please refer to the following figure :

$$\text{ROI} = \frac{\text{Gains from Investment} - \text{Marketing Investment}}{\text{Gains from Investment}} \times 100\%$$

Figure 2.5: Return on investment

Digital marketing mix

A digital marketing mix is a combination of various digital platforms. It is a tactic or a marketing strategy that provides an equilibrium between different media channels. These channels include paid, owned, and earned media. The purpose of the digital marketing mix is to achieve the goals and objectives of marketing.

Paid media

What most people think of when they hear the word **advertising** is paid media. In this case, you pay a third party to advertise your material so that it may be seen by your target audience.

Instances include:

- Print ads
- Digital banner ads
- TV and radio spots
- Boosted social posts
- Pay per click

Using paid media

If you want to increase the website's traffic, paid media is a must. Running a sponsored YouTube campaign by uploading a product video is an example of this kind of strategy.

The metrics for measuring the success of such sponsored advertising include clicks, views, and conversions.

Owned media

Your own website or material is considered as owned media if it was created by you or it is outsourced. Press releases, podcasts, blogs, white papers, case studies, and other types of digital and print material, newsletters, and photographs may all be included.

Using owned media

Content marketing relies heavily on owned material, which helps to educate your customers by addressing their pain areas and inquiries. You have the greatest influence over this kind of media.

Owned media may be used to build whatever you need to drive clients along the sales funnel and communicate with them about the special deals or sneak peeks. Please refer to the following figure :

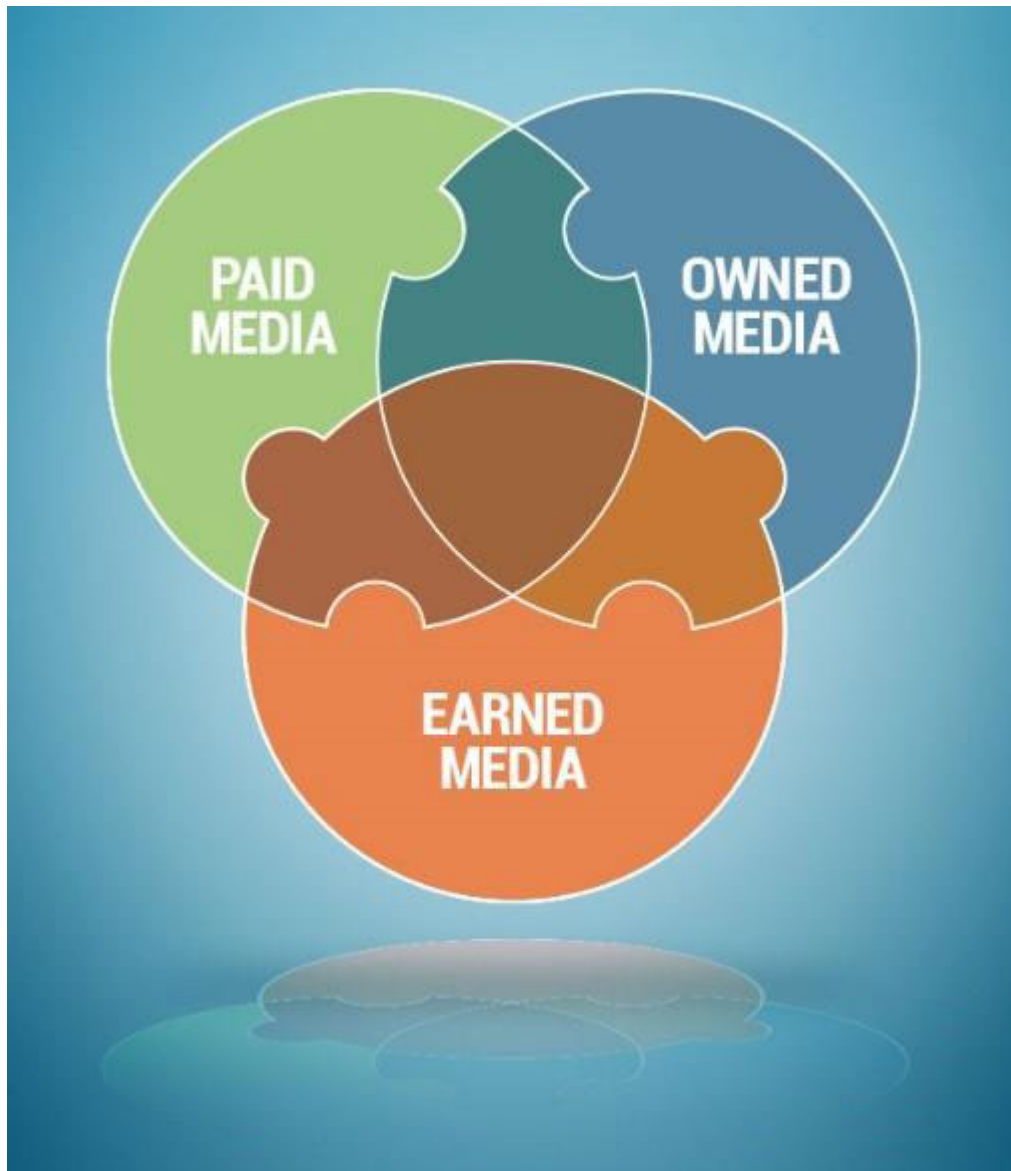

Figure 2.6: Digital marketing mix⁷

Earned media

Free exposure is what earned media is all about. Sharing your brand's news or information is known as *earned media*.

Examples of earned media are as follows:

- SEO rankings
- Awards earned
- Online reviews

- Backlinks
- Press coverage

Using earned media

Earned media is essential for enhancing the brand's online reputation.

Reach out to proprietors of popular industry blogs and ask for the guest blogging prospects or even the link back to your very own blogs or websites. SEO rankings may be improved by conducting keyword research and afterward generating blog entries that are keyword-rich.

Impacts of digital channels on integrated marketing communication

Integrated marketing is an approach to creating a unified and seamless experience for consumers to interact with the brand/enterprise; it attempts to meld all aspects of marketing communication, such as advertising, sales promotion, public relations, direct marketing, and social media, through their respective mix of tactics, methods, channels, media, and activities, so that all work together as a unified force. It is a process designed to ensure that all messaging and communications strategies are consistent across all channels and are centered on the customer.

There are four basic tenets of integrated marketing that should be grasped before it can be comprehended.⁸

Consistency

Consistency is perhaps the most critical concept of integrated marketing. Consider the company's identity, goal statement, and why you are in business. It is imperative that you and your firm's actions, words, creations, and sales be consistent. Public relations, paid advertising, social media, and content development all need to be aligned with a common subject. In terms of integrated marketing, it really does not matter whatever that topic is. The most important thing is that you stick to your guns.

This approach also applies to design and style. It is important to use the same colors, typefaces, and other visual components to promote that consistent idea across your full market reach. This also lets you integrate

your numerous marketing channels under a certain ecosystem². For example, Whiteness is a central theme in all the advertisements for *Tide washing powder* on all marketing channels.

Community

Customers are the lifeblood of every firm's marketing plan. Companies require customers to operate and develop. Problems arise when a company's strategy is to concentrate on obtaining consumers rather than keeping current customers and audiences. Contests, viral campaigns, sweepstakes, and guerrilla marketing strategies generate a lot of attention but typically do not boost revenue for the organization.

Your loyal consumers are the ones that bring in the big bucks. That is what you call your *neighborhood*. Marketing to an existing consumer base is less expensive and yields a higher return on investment than trying to reach out to new markets. You should not have to sell them believing you or persuade them that you provide a decent product. The most difficult part is over.

Keep in touch with your current clientele. Your marketing plan should be based on these principles. Make it simple for them to remain connected by learning how and why they prefer to do so.

The methods of maintaining the community are as follows:

- Email campaigns and newsletters
- Exclusive member benefits and events
- Surveys and reconnections

Co-operation

It is essential for a firm to work together in order to succeed. Everyone has a role to play in this. Everyone in a firm has to be on the same page when it comes to resolving a problem. Many firms have a strained relationship between their marketing and sales departments. Or maybe the logistics division abhors the study of accounts.

In order to implement a successful marketing plan, all the departments must work together seamlessly. Everyone should be on the very same page and working towards the same objectives. This cannot only be fixed by

rearranging the workplace space. Make sure everyone is on the very same page by scheduling frequent meetings and organizing work properly. If you have put something out there, do not forget to evaluate it and also follow up.

You should use the following methods for co-operating with customers :

- Co-department meetings
- Appropriate task delegation
- Review and follow-ups

Communication

The key tenet of integrated marketing is communication. Everything else would come to a screeching halt without it. Improve the company's ability to disseminate critical information across various online and offline mediums by establishing effective communication channels.

It is a good idea to maintain a track of client follow-ups using a **Customer Relationship Management (CRM)** platform like *Salesforce*. You will recall outreach calls and past talks, and other staff will be able to grab the pieces if you are not around. In order to help your company's essential personnel rapidly access the information they need for the project, it is a good idea to build a database that contains both useful and also extraneous data.

The following are methods of communication :

- Have a good CRM program
- Set up company resource databases
- Install a company server chat system

Email marketing

Email marketing is the act of sending promotional messages to people in mass quantities. It typically is to generate sales or leads, and it may contain advertising. Please refer to the following figure:

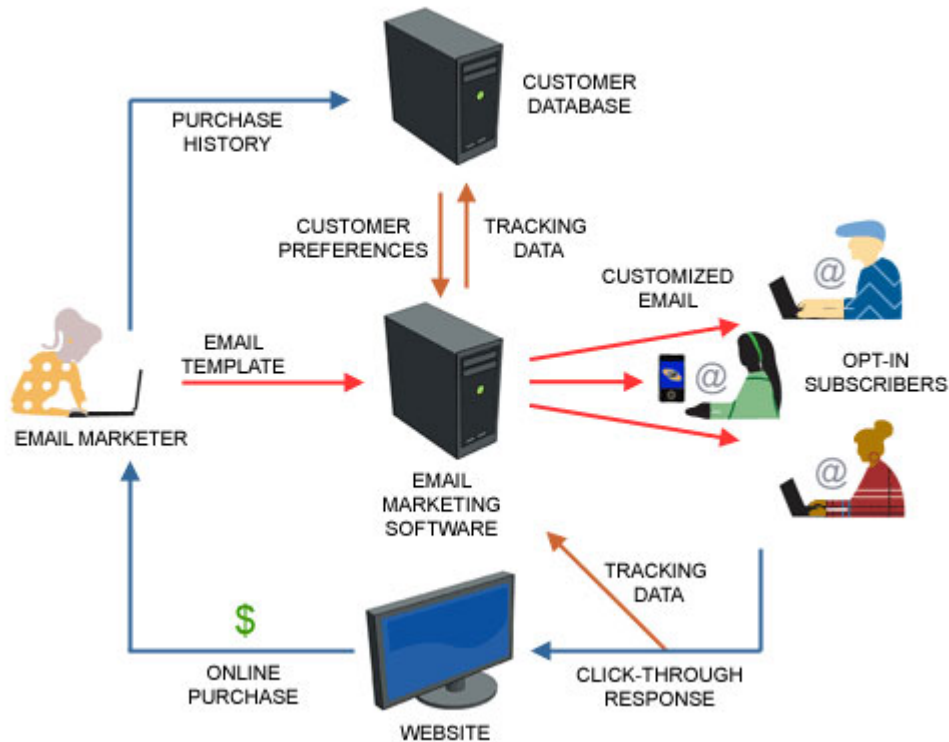

Figure 2.7: Email marketing¹⁰

Some benefits of email marketing are as follows:

Building relationships with customers

It is the practice of mass emailing promotional communications to a large number of individuals. Its primary purpose is usually to create sales or leads but might also include advertising as an added bonus.

It is a great chance to create connections with individuals who are really interested in their company by using your current email list. Since these consumers or clients have signed up for an email, you should treat them as such. It is possible that they are just curious about what you have to offer them.

Tell the readers what they can anticipate, including the themes you will cover and the frequency with which you will be contacting them whenever they sign up for the newsletter. Keep your word and do not attempt to entice new clients with empty promises. Make sure the freebie you choose is appropriate for your company and audience. As a marketing strategy, you want to provide your subscribers a freebie in order to create a strong

connection with them and encourage them to join up for services or buy your goods in the future.

Stretching your marketing budget

Email marketing is among the most cost-effective methods of digital marketing, making it a good alternative for small and growing firms that do not have a lot of money to spend on marketing. Email marketing is a fantastic value for your money when compared to print marketing, which has its own printing, design, and shipping charges.

People who have signed up for the newsletter, for instance, might get messages encouraging them to visit your website.

Increase sales and profits

Email marketing is a great way for businesses to get a return on their investment. Every dollar spent on an email marketing campaign may expect a **Return on Investment (ROI)** of roughly \$38^{[11](#)} for every dollar invested.

Personalize with segmentation

To target a certain group of people, email marketing is the best option for your company's needs. Segmenting your email list enables you to deliver personalized messages to the specific subsets of your mailing list, depending on a variety of criteria.

If you want to target clients in a certain geographic region, you may use segmentation. Email segmentation may also be used to sell to those who have indicated an interest in a certain product or service in marketing emails they have received.

Own your list

Many business owners do not recognize this perk of email marketing that one should truly control an email list.

Something you have built up over time without the use of computer algorithms. Other means of marketing, like social media marketing and paid advertisements, cannot make this claim since users would only see the

message if the platform's algorithm favors it. Please refer to the following figure :

Figure 2.8: Benefits of email marketing¹²

Gather valuable insights

If you are interested in learning more about your audience, building an email list is indeed an excellent way to do it. It is possible to send surveys similar to the ones seen in [figure 2.9](#) using the email list. Please refer to the following figure :

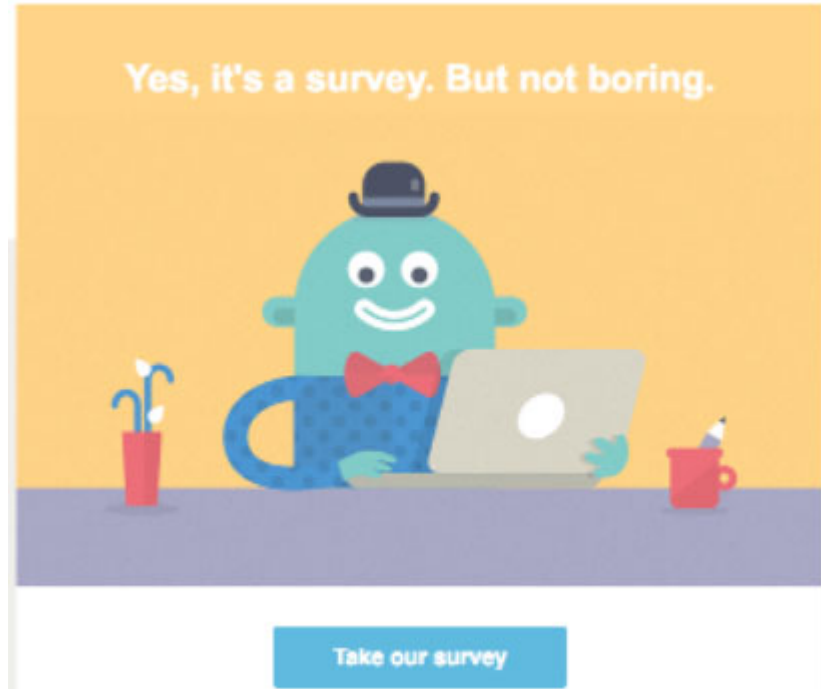

Figure 2.9: Taking a survey as an illustration¹³

Drive website traffic

Sending more people to the firm's site is yet another advantage of email marketing.

Include the strong call-to-action and a direct link to their website at the conclusion of each email. Another strategy to drive traffic to your website is to include relevant links in your own blog posts or elsewhere on the Web.

Automate tasks and save time

There is a good chance that you already have a lot on your plate. One-off emails (email that is sent to your subscriber only once) might take a lot of time to write and send.

As a result, email marketing offers several advantages thanks to automation. Using an email service provider might be a good investment in this case as well.

Encourage spreading the word

With email marketing, your message may be quickly shared with others. As a result, the brand's potential reach may be greatly expanded.

As an instance, consider sending an email advertising the limited-time offer. Many people on your email list have shared the deal with their friends and family members.

See instant results

Email marketing is among the few ways you can get immediate results.

Subscribers may begin making purchases as quickly as you send out the marketing email. Other techniques of marketing, on the other hand, are not always successful.

Advantages of email marketing

There are various advantages of email marketing :

- **Email is dependent on permission:** Customers trust you with email addresses, which is like being granted access to their home in the virtual sense. Uninvited visitors have a lower probability of attracting attention and converting customers.
- **Access to your target audience is simple and easy:** Your subscribers will be able to contact you on their own timetables. Users view their email on a daily basis, which means that your email is more likely to be seen.
- **Allows you to have more influence:** A lot of marketing platforms out there do not give you ownership of the platform. Everything you have worked so hard on will be lost if a platform goes away.

You own the connections you build with the subscribers when you use email to communicate with them.

Disadvantages of email marketing

Email marketing has a number of serious drawbacks, including:

- **Risk of spamming**

Spam is defined as sending out a large number of unrelated emails to your customers on a regular basis.

An email has the unfortunate side effect of being a frequent target for spammers. The receivers of such emails are irritated because they are not getting any useful information from them. As a result, individuals may choose to unsubscribe from your email list.

- **Likelihood of unresponsiveness**

Even if you send the consumer a standard email, it is unlikely that you will receive a response.

Providing high-value material that really is individualized and catches reader's attention will ensure a good reaction. Marketing emails and click rates may suffer if they lack customization or are only concerned with making a sale rather than delivering value to the recipients.

- **Ineffective resource utilization**

It might be a waste of time as well as resources for the team members if a big number of emails go ignored. This may be avoided with a well-planned marketing approach that makes the most of emails and uses them to boost sales.

- **Damaged company reputation**

Emails that are considered spam might harm your company's reputation.

Focus on the quality of your email content in order to prevent this. Sending unsolicited emails might damage your reputation.

- **Tricky rules and regulations to navigate**

The use of email for business purposes is subject to a plethora of regulations. A few instances include **Canadian Anti-Spam Law (CAN-SPAM)**, **General Data Protection Regulation (GDPR)**, and the **California Consumer Protection Act (CCPA)**. Unsolicited emails are expressly prohibited under all these rules.

As a result, a small percentage of your subscribers still flag spam emails, even after they have signed up. The sender's reputation suffers as a consequence.

Opt-in email permission marketing

Permission-based email collection strategies are used in opt-in email marketing campaigns to gather email addresses from consenting customers. A prospective customer's email may be added to the marketing list depending on their position inside the sales funnel after you have their contact information on file. You can see the funnel in the following figure:

Figure 2.10: Sales funnel¹⁴

The first time your prospect interacts with the brand, you may separate them into the list that exposes your online courses and give practical

suggestions for those who are interested in learning more about your products.^{[15](#)}

For those who have already purchased your course, you may send individuals emails with guidelines on how to successfully complete the course and how to put what you have learned into practice. You could use opt-in email marketing to do more than simply collect email addresses and send out sales pitches. Actually, it is a bad use of the tool in the first place.

Opt-in email marketing is a better strategy for guiding customers through the sales funnel. Please refer to the following figure :

The figure shows two identical-looking forms side-by-side, both titled "DOWNLOAD YOUR FREE REPORT". Each form has an "Email" label above a text input field containing the placeholder "Your email address". Below the input field is a checkbox with the text "I would like to subscribe to updates from Litmus." and an orange "SUBMIT" button. The left form has the checkbox unchecked and is accompanied by a large black checkmark. The right form has the checkbox checked and is accompanied by a large black X.

Figure 2.11: Example of permission marketing^{[16](#)}

- **Invite prospects to interact:** Your social media pages and blog links should be included in any email marketing campaign you send out.
- **Encourage customers to convert:** Make it clear why a potential customer must purchase your product. Every time you can, provide instances from your own experience to support your points of view.
- **Follow up with prospects:** If a potential customer leaves their shopping cart or is inactive for a long period of time, send the nurturing email to reassert your company's presence in their thoughts.
- **Send promotions :** To get people to purchase a product for the very first time or for the second time, provide discounts and other promotions. Determine the goals of your opt-in email marketing campaign before beginning. It is not a good idea to imitate somebody else's campaign since each product maker has a distinct purpose. Think about the objectives you would like to achieve, and then develop emails that encourage customers to help you get them.

- **Gain brand visibility:** Motivate your email subscribers to share your content if you really want to position yourself as the thought leader in your field and increase your brand's visibility. You receive more signups and more people to forward the emails.
- **Boost sales:** In order to persuade customers to make a purchase, provide incentives such as coupons, bundles, and discounts.
- **Increase upsells:** Customers should be encouraged to purchase numerous products and other digital goods.
- **Check on progress:** Assess the progress of your clients' online courses to see where help is needed and what feedback there is.
- **Solicit reviews:** Ask your customers to provide reviews of the brand on the internet. In addition to gaining backlinks, your brand will be more known. Additionally, potential clients would feel more at ease making a purchase from you.

Online PR

Using the online communication channels, the public relations communicators do public relations work known as online PR (and also the communication tools). Such outlets include blogs, social media, and also websites, in addition to online pages of traditional media.¹⁷

As a result of the actions made in the print industry, the possibilities and chances provided by the online media are used, and the plans are altered appropriately.

The goal of online PR

An organization's public image should be improved in a way that lasts for years to come. In addition, a number of smaller goals might be outlined.

Introduction of new consumers and their retention:

- The dissemination of knowledge
- A rise in awareness
- Providing the best value for the money
- Maintaining a positive image in the eyes of others

- Success is evaluated and managed
- A high degree of realism is achieved

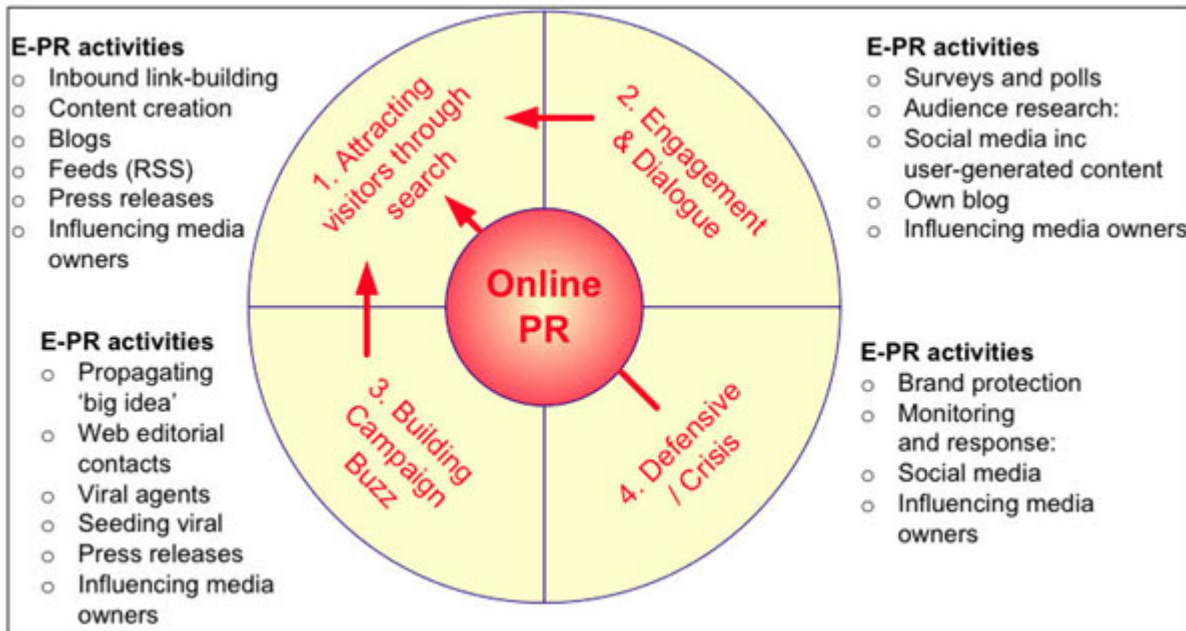

Figure 2.12: Online PR¹⁸

Benefits of online PR

The whole marketing approach relies heavily on online PR. However, despite the general belief that online campaigns are a new frontier in the brand message, **Small and Medium-Sized Enterprises (SMEs)** still tend to consider them as add-ons. Online PR has several advantages:¹⁹

- **Cost benefits:** Generally, Web marketing and public relations are far less costly than conventional marketing. In addition to removing the requirement for printing and other associated expenditures, several online PR platforms offer no out-of-pocket expenses. You will still have to hire a top-notch PR agency with internet expertise, but you will spend far less and get just as good, if not better, results.
- **Fast results:** The internet is about material on-demand. As a result, the PR and marketing material you upload online is promptly digested, resulting in immediate advantages for your firm. Whenever compared to conventional public relations methods, it is far easier and more cost-effective to make changes to your message.

- **Size equilibrium:** Small and medium business solutions now have an equal opportunity to compete on an even playing field thanks to online platforms. Using the correct internet platforms, you may have the same impact as your industry's biggest rivals if you offer high-quality content.

Interactive advertising

The media-based marketing strategy is known as interactive advertising involving the audience in some way. This kind of advertising makes use of both online and offline interactive media.

Direct or indirect feedback is sought in participatory advertising, with the goal of getting people to participate and interact with the ad in some manner. It is a common practice to have the same goals in both conventional and interactive advertising. It is possible to tailor the content that is shown to various audiences when using interactive advertising as opposed to more conventional forms of media. Interactive advertising has a distinct advantage over conventional ad campaigns since it provides a more customized experience for customers.²⁰

The internet has made it possible for marketers to collect information about customers (through cookies) in order to develop the profile of each individual and display the most relevant advertisements.

Examples of interactive advertising

- **Social media:** In order to reach their intended audience, advertisers use interest-based targeting with the help of social media. It is possible to target certain groups of people through advertising on sports-related websites and forums, for instance.
- **Video:** As soon as a person opens the new page, video advertising is routinely loaded. The purpose of video advertising is to communicate a brand's message to potential customers. The viewer of a video commercial has the choice of pausing, muting, or skipping the video completely. Adverts in the video are often focused on a certain topic.
- **Interactive display windows:** People are drawn to interactive display windows since their actions may change the content on the screen.

Interactive advertising has several benefits :

- Incentivizes viewers to interact with commercials.
- In addition, it allows customers to see advertisements in a variety of ways.
- Promotes the exchange of information and ideas across suppliers and customers.

The disadvantages of interactive advertising:

- It might take a long time to acquire the data needed to construct consumer profiles and guarantee that advertising is targeted to the proper audience. There is a greater risk if the market is new but also has not been well studied.
- Data collection on customers is expensive.

Online partnerships

Long-term agreements to market the online services on other websites or via email are known as online partnerships. Affiliate marketing, link building, aggregators like online sponsorship, price comparison sites, and co-branding are all examples of partnerships.

Today's marketing strategy relies heavily on partnerships. It is the same in cyberspace, too. The management of your internet partners takes a lot of time and effort. Many major corporations employ dedicated employees to handle these partnerships. An opportunity is lost when relationship management is overlooked in smaller organizations. Affiliate marketing, link building, and online sponsorship are the three sorts of online collaborations that must be maintained. When it comes to link management, everyone must be included in the process. In terms of partnership marketing for transactional e-commerce sites, affiliate marketing is perhaps the most crucial and most effective. Digital marketing communications like, link building, online PR, and also the usage of the Web 2.0 syndication may also be seen as a type of partner marketing, which really is typically entirely free of visits created. [21](#)

Affiliate marketing

Increasing revenue via affiliate marketing is a subject of much debate. While the cost is lower, the issue is whether such sales would have been generated regardless of the brand's popularity. Even though Amazon does have an affiliate network, others claim that its brand is good, and with the big consumer base, it has still been able to make money without it. For more than a decade now, Amazon has been using its program to push new products, like music downloads, despite the fact that commissions have been lowered.

Online sponsorship

Advertisers gain from online sponsorship by having their name connected with a well-known online brand. Sponsorship, on the other hand, enhances the bond and trust that already exists between the publisher and its readers.

Another option to build long-term connections is to pay to sponsor another site or section of it, such as a portal, for a longer period of time. It is possible to take advantage of the synergies between various organizations by using co-branding as a low-cost technique of sponsorship. If the media owner's microsite is where people are interacting, it might be more successful than driving them to the brand's site directly.

Viral marketing

Interest in the business or product may be generated by communications that move swiftly from one person to the next in viral marketing. The concept is that the material is shared by the users themselves.

This type of marketing thrives on social networks because of their quickness and the ease with which they may be shared. When it comes to a current trend, it is all about *YouTube* videos that are subsequently shared on social media platforms such as Facebook and Twitter.

Furthermore, the viral ad may be both a blessing and a curse. It is critical to keep in mind that with this form of marketing, the message is mostly in the hands of the audience, raising the possibility of it being misconstrued. The viral campaign, on the other side, has the potential to do wonders for the brand's outcomes.

Working of a viral campaign

Figure 2.13: Viral marketing²²

According to the rules of theory, the viral marketing campaign should be very easy to implement. A video or other appealing piece of content is created, uploaded to the internet, and then promoted. All you could do now is to wait for people to start sharing it.

There are two sorts of distribution strategies for brand videos: visible and hidden. Unlike with the latter, when the brand's involvement is exposed only after the fact, the user is immediately aware while seeing advertising or the branded material in the former.

In order to avoid the consumer feeling misled, defrauded, or duped when you use hidden marketing strategies, you must exercise extreme caution.

It does not matter whatever approach you choose; the most important thing is to avoid seeming spammy or going overboard with your material. As opposed to constantly reiterating what you have already said, the greatest method is to let a “*viral fuse*” fire itself.

Blogs

As the name suggests, blogs are online journals or informative websites that show articles in reverse chronological order, with the most recent at the top

and the older pieces tucked towards the middle. Authors or groups of authors use it as a stage to discuss a certain topic.

In the early days of blogs, individuals used them mostly to communicate their own experiences and interests, such as their hobbies and pastimes. Today, blogs are a crucial part of a company's internet marketing strategy and a lucrative employment option for people.

The look and feel of blogs have evolved throughout time. In addition to the social network feed, you could now add an author profile, contact page, and other widgets to your blog platform.

In spite of this traditional structure, several bloggers still adhere to it by splitting the blog layout into the following components :

The image shows a screenshot of a Springshare Library blog post. The page layout is divided into several sections, each annotated with a red box and an arrow pointing to it:

- Most recent post first:** Points to the top of the main content area where the latest post is displayed.
- Page type: blog:** Points to the 'The Latest: the Library Blog' link in the left sidebar.
- Add Books from the Catalog and Database Assets directly in the post!:** Points to the book cover and title 'The Warmth of Other Suns' within the main post content.
- Post information: author, date, assigned subjects, number of comments:** Points to the text 'Posted by Chris Bjberg on February 25th, 2016 in Women & Gender, Black History Month, History | 1 Comment'.
- Blog sidebar contains links to recent posts, subscribe via email, links to monthly blog archives and posts by subject, and links to your social media profiles:** Points to the right sidebar area containing 'Recent Posts', 'Subscribe', 'Archive', 'Subjects', and 'Follow Us' sections.

The main content area displays a post titled 'African-American History from Women of Color' with a book cover for 'The Warmth of Other Suns' by Isabel Wilkerson. The post text discusses the book's content and its relevance to Black History Month.

Figure 2.14: An example of blogs²³

Header: Incorporating the blog's name or logo and the primary menus for About, Home, and also the contact pages, this design is simple yet effective.

Body: The most recent or most popular blog articles are shown here.

Sidebar: Widgets and highlights, like most popular blog entries and the most recent statements, are often seen here.

Footer: At the bottom of every blog post, you will find a link to the disclaimer and privacy policy.

Blog posts are the most common kind of material on a blog.

Types of blogs

Based on the blog owner, the material might be official or casual, and the aims of each kind differ. The following are the differences between the many kinds of blogs that exist today:

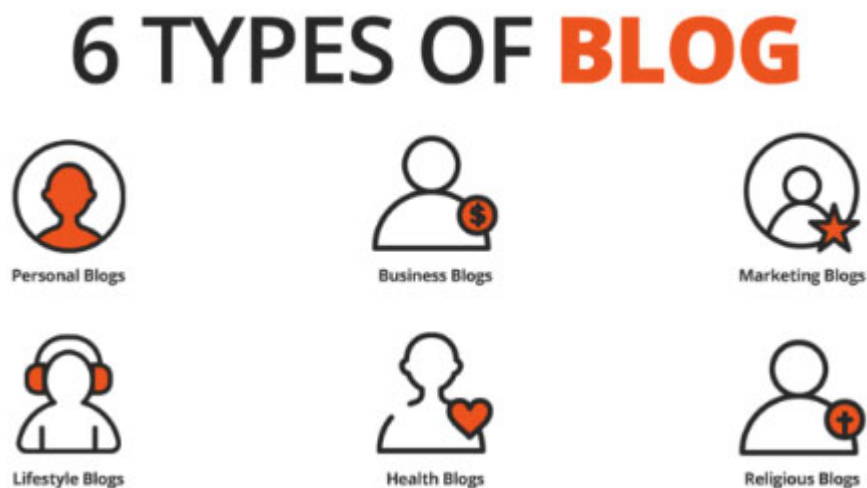

Figure 2.15: Types of blogs²⁴

Personal blogs

In this is a kind of blog, individuals write whenever they wish to share their own experiences, emotions, and opinions with a larger group of people online.

There are no set rules or themes to follow, but it is critical to choose subjects to which your target audience could connect. To extend the blog's

reach and impact, you will need an interested audience and a community of other bloggers that you can connect with often on the site.

Some instance of personal blog is *Girl with a Camera* and *Fifty Coffees*.

Business blogs

Several company owners and digital marketers choose to use this form of a blog to attract the target audience. They usually want to get more publicity, traffic, and clients for their company via their blogging efforts. Business bloggers are successful when they attract readers who would sign up for the email list, fill out the lead form, and make the purchase later on.

For instance, the dentist may provide blog material on all elements of dentistry in a way to lure more readers and hence more customers.

Marketing blogs

When it comes to marketing, it is really about making the appropriate connections with your potential consumers at the right moment. Email, social media, video, and websites are just some of the ways in which companies may connect with their consumers.

For example: *HubSpot Marketing Blog* (refer to this link https://blog.hubspot.com/marketing?_ga=2.38199460.64004374.1566500811-1493293515.1553017609),

DWDigitalWeb blog, and so on.

Lifestyle blogs

For the lifestyle blog, you must have a certain passion or hobby to write about.

People that read and subscribe to lifestyle blogs do so because they are interested in topics such as art, health, culture, and interior design. Lifestyle blogs allow you to write about a broad range of topics; that is why they are so popular.

The use of high-quality photographs to display their hobbies and also interests is more common on lifestyle blogs, which place a higher value on the aesthetics of the site. You may anticipate blogs to be packed with tales of people's lives since lifestyle simply refers to the way the person or the

group lives. Such blogs are more interested in their subjects than in forming relationships with their followers. Nevertheless, the marketing strategists see them as quite important.

Health blogs

It has become more popular to keep up with the latest health news and features on health blogs, which encourage individuals to stay active. Sponsored health and fitness blogs are common on the internet. A few sponsors will provide you with complimentary items in exchange for an honest evaluation, so you can highlight the importance of staying active and healthy.

ACE Insight Blog, The Art of Healthy Living, Nerd Fitness, My Fitness Pal Blog, Well + Good, and Sleep Junkies are a few examples of health blogs.

Religious blogs

The internet's revolutionary consequences pervade all facets of our everyday life, including religion.

Blogs on religion bring together people from all over the world, whether they are members of formal religion or just on their own spiritual journey. Religious blogs allow you to learn about a variety of spiritual traditions and history, current events, and statistics, all while meeting new individuals and organizations that may have similar or even opposing viewpoints. For example, *BeliefNet, Redeeming God, and Gospel Chops* are a few examples of famous religious blogs.

Conclusion

Internet marketing is defined as the strategies used for advertising a company's goods and services using online means. Compared with traditional commercial advertising, the internet offers more networks and marketing resources. The increasing use of electronic media, specifically the internet, for marketing purposes has contributed to the birth of the internet-marketing, e-commerce, and so on.

Digital strategy frameworks encompass everything from communications to strategic planning to ultimate goals. Some people try to be all things to all people, whereas others concentrate on a single thing. You must know the

business's objectives and priorities in order to develop the model that fits those requirements. For instance, PIEARM is a six-step technique for effective digital marketing.

Email marketing is the act of mass emailing promotional communications to a large number of individuals. Its primary purpose is usually to generate sales or leads but might also include advertising. It is a cost-effective alternative for small and growing firms with a small marketing budget.

In the upcoming chapter, you will learn about search engine advertising. The readers will be able to create their own ad campaigns using *Google Ads*. Display marketing, buying models, *YouTube* marketing, and trends in digital advertising are discussed in the upcoming chapter.

Key terms

- **Internet marketing:** Promoting goods and services through the internet.
- **Touchpoints:** Target/places or areas where you can interact with potential customers in an effective manner.
- **PIEARM:** Plan, Implement, Execute, Analyze, Report, and Measure.
- **PPC:** Pay-per-Click
- **Backlink:** An inbound/incoming link is a link to your Webpage from some other website.
- **IMC:** Integrated Marketing Communications
- **Sweepstakes:** A marketing promotion strategy in which existing customers are rewarded to attract new customers.
- **Email marketing:** Promotion of a product or service by using email service.
- **Online PR:** Managing personal relations electronically.
- **Even playing field:** Digital marketing provides equal opportunities to each and every organization irrespective of its size, budget, turnover, and so on.
- **Affiliate marketing:** An advertising model which uses affiliates (third-party publishers) to increase Web traffic or generate leads.

Questions

1. What are the challenges and opportunities in internet marketing? Explain in brief.
2. Explain the PIEARM technique for effective digital marketing campaigns.
3. Outline your current internet marketing strategy and include your future (planned) internet marketing strategy.
4. What are the impacts of digital channels on IMC Email marketing?
5. What is the role of viral marketing in digital marketing? How does it help?
6. What are the objectives and benefits of online PR?

Exercises

1. Prepare an email marketing plan for promoting a newly launched course by an educational institute of repute.
2. Create an online PR campaign for promoting a talented singer.
3. Identify a successful viral marketing campaign.
4. Create a blog of your choice.

CHAPTER 3

Search Engine Advertising

Introduction

Search Engine Advertising (SEA) is an integral part of digital marketing. It is an inorganic branch of search engine marketing that includes online paid advertisements that are displayed on a **Search Engine Result Page (SERP)** and on partners' websites. SEA is an efficient and very cheap method of online advertising that provides an opportunity for marketers to place their paid ad among the search results on different search engines such as Google, Bing, Yahoo, and many more.

Structure

In this chapter, we will learn about the following topics:

- Search advertisement
- Ad placement
- Ad Ranks
- Creating ad campaign
- Campaign report generation
- Display marketing
- Buying models
- Programmable digital marketing
- Analytical tools
- YouTube marketing
- Trends in digital advertising

Objectives

After reading this chapter, the reader will be able to develop a basic understanding of search engine advertising, display marketing, and different

types of ads. The reader can design their own ad campaigns after reading this chapter. The reader can have in-depth knowledge about various digital marketing buying models and analytical tools for measuring the success of marketing strategies.

Search advertisements

Paid search advertising (also called sponsored advertisements, search-engine marketing, search marketing, pay-per-click marketing, and cost-per-click marketing) is the strategy that shows adverts in the search-engine results whenever anyone searches for services or goods supplied by an advertiser. In this manner, the ad shown properly fits each enquiry¹.

Search advertising is particularly successful as it is focused on the clear demand of the consumers rather than merely on implicit knowledge about what is required. This, naturally, enhances the possibility of clicks and conversion.

Google has been the most prominent search engine. We will take it as an example and explain how search advertisements function. A Google search engine result page can be seen in [figure 3.1](#):

PAID

Figure 3.1: Google search engine result page (SERP)²

Google uses the modified second-price auction method to rank the advertisements that display on the Google search-engine results pages and calculate how much cost advertisers must pay to be on top of the results page.

Google's second-price auction principles simply mean rather than need to pay the whole price, marketers pay the amount required to beat the closest rival based on the ad rank.

Ad placement

Ad placement refers to the set of ad units on the website which allow marketers to display their adverts in certain locations. Size, kind, and position of the ad are all considerations when it comes to ad placement. An ad placement may be described like this :

- 728×90 (size in pixels)—above main content (location)
- 300×250 (size in pixels)—in-feed (location)

The placement standards for each ad network are different. Some have pre-made locations, while others enable publishers to choose their own criteria.³

Types of ads and placements

Full-page ads and little squares are two examples of the many ad sizes and formats available. The following are some of the most typical examples:

Full page

Ads may be placed on the sides of the page, which is visible in its entirety. A full-page ad is one that appears above and below a fold, and it is one of the costliest ad options. An example of a particular publisher's preferred design may be seen in the following screenshot:

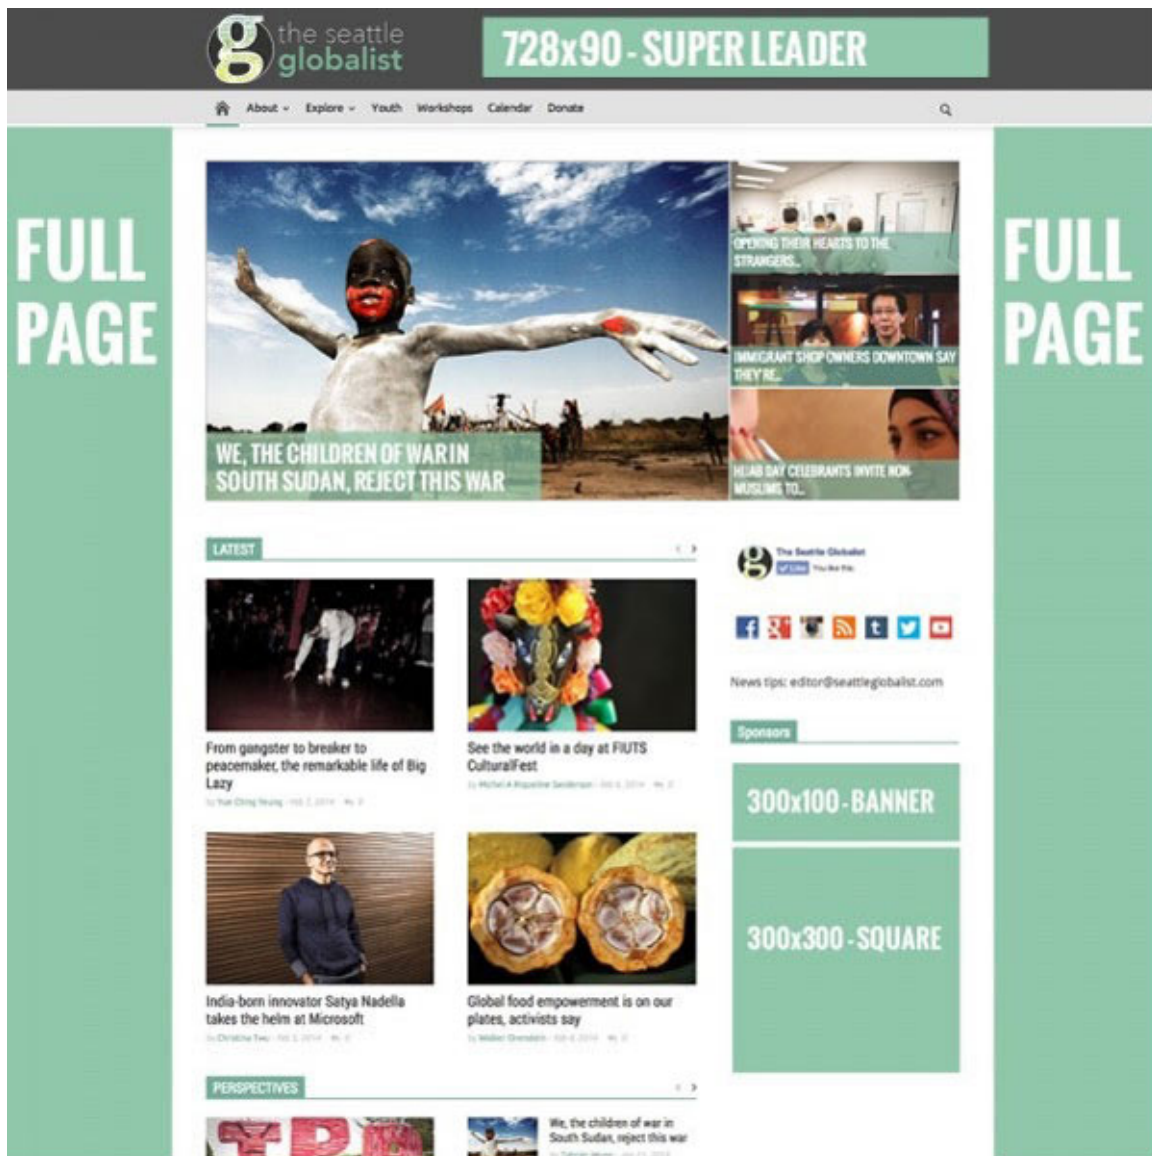

Figure 3.2: An example of a full-page ad⁴

Half-page

Because of the vast amount of area they take up, half-page advertising is often costly. Generally, sponsor advertisements are displayed here. A half-page ad can be seen in [figure 3.3](#):

Figure 3.3: An example of half page ad⁵

Banner ads

These are the most common kind of adverts you will encounter on the internet. They may be found on the top, side, or bottom of a page. There are a variety of ways to acquire advertising space on a publisher's site, such as via ad networks or directly from the publisher. [Figure 3.4](#) shows examples of banner ads:

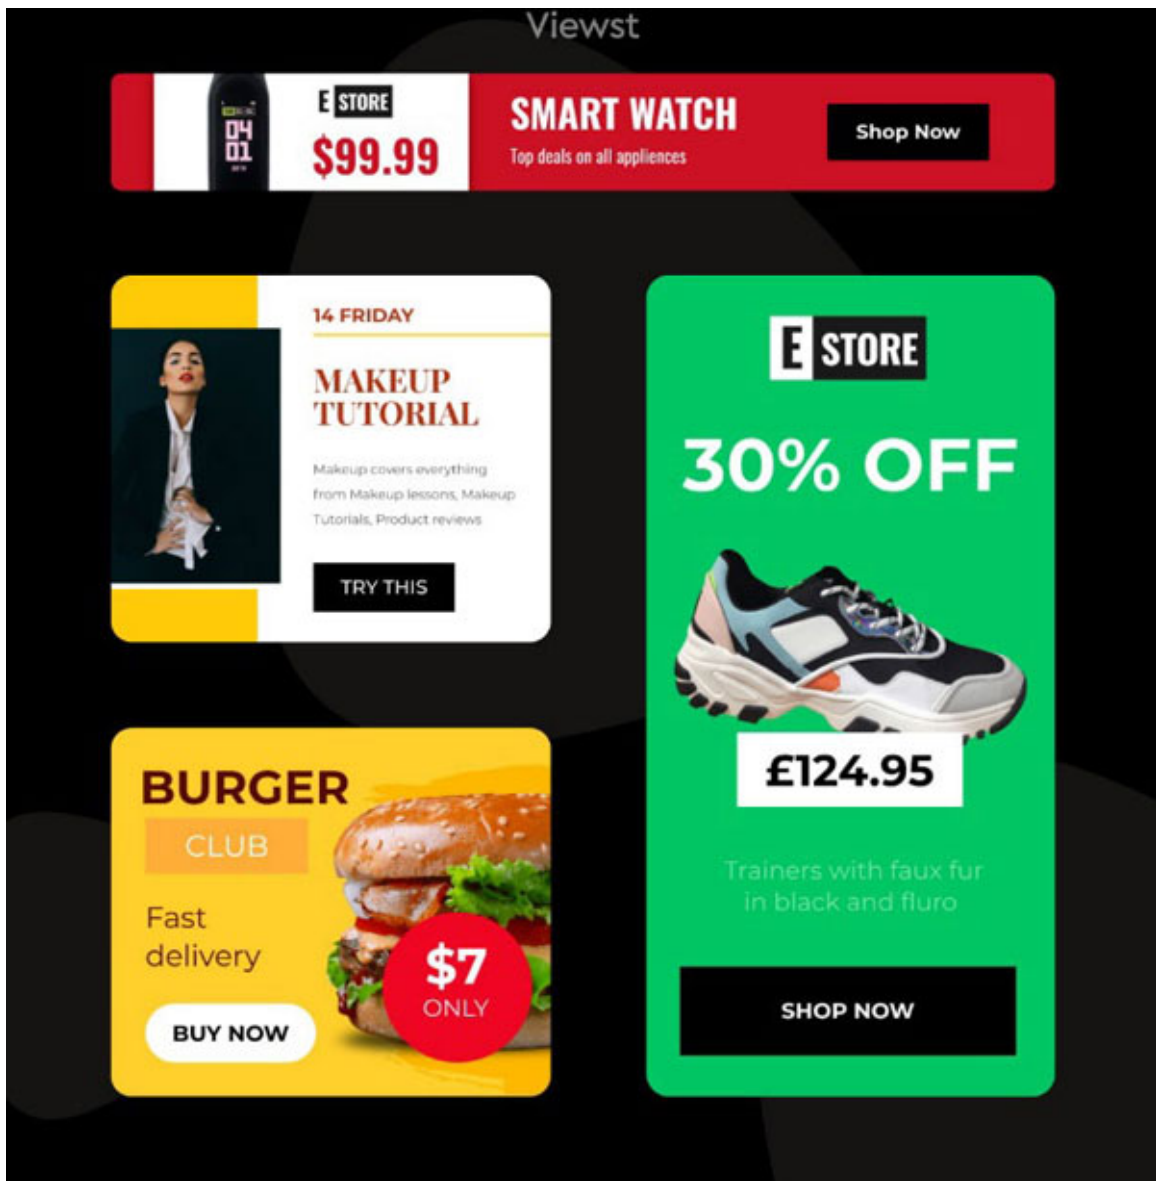

Figure 3.4: Banner ads⁶

Large square

These may be seen on the margins of SERPs or on websites. A large square ad can be seen in [figure 3.5](#):

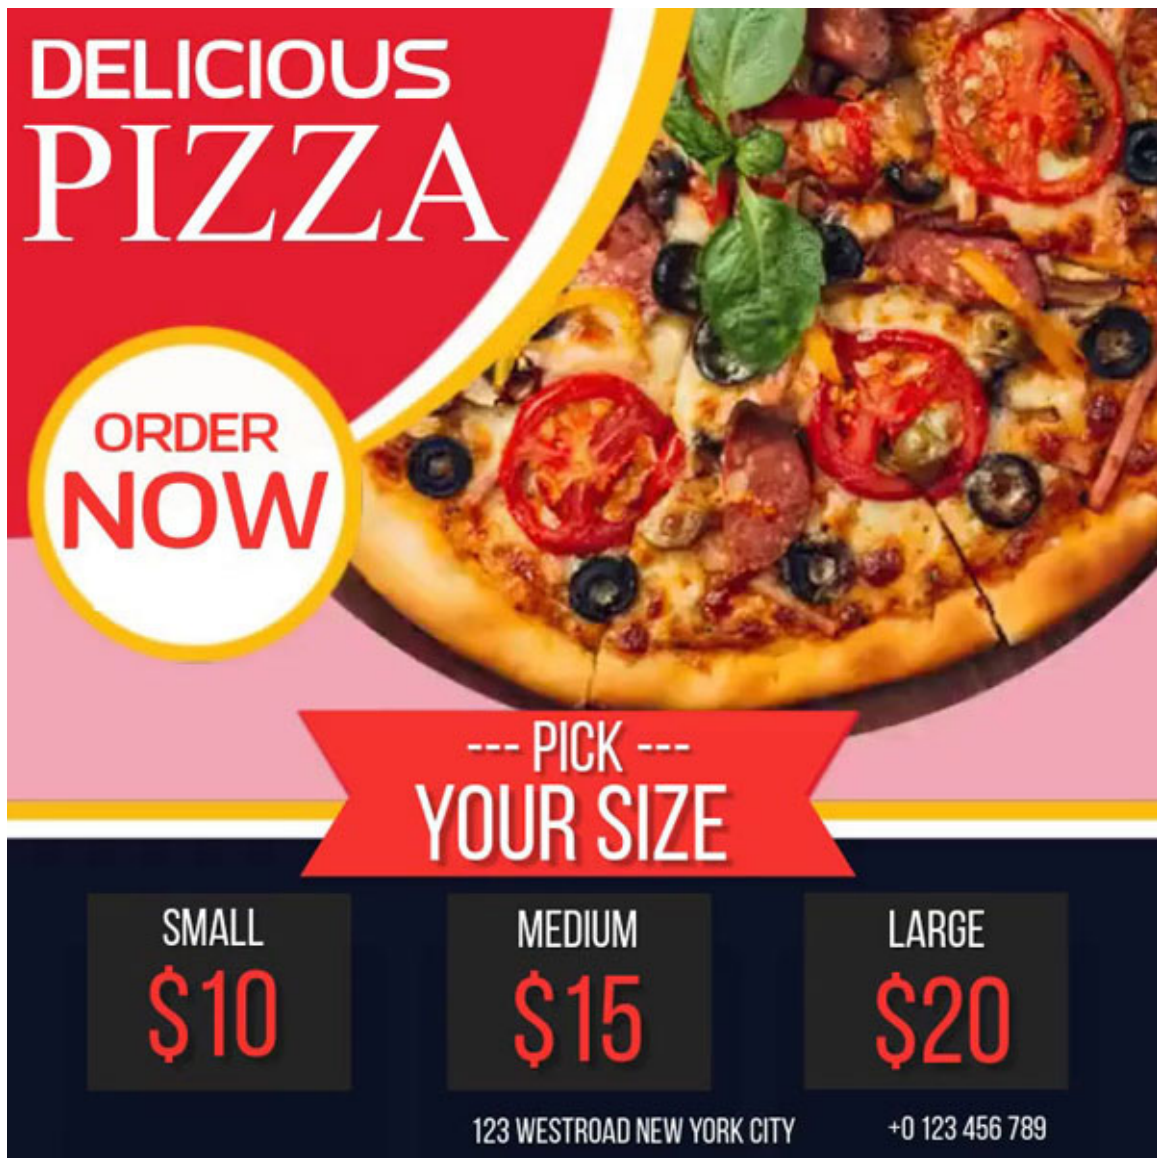

Figure 3.5: Large square⁷

Small square

If you want your audience to recall the product that was previously searched for or that is relevant to the content, use these forms of advertisements of 200×200 pixels. Small square ads are shown in [figure 3.6](#):

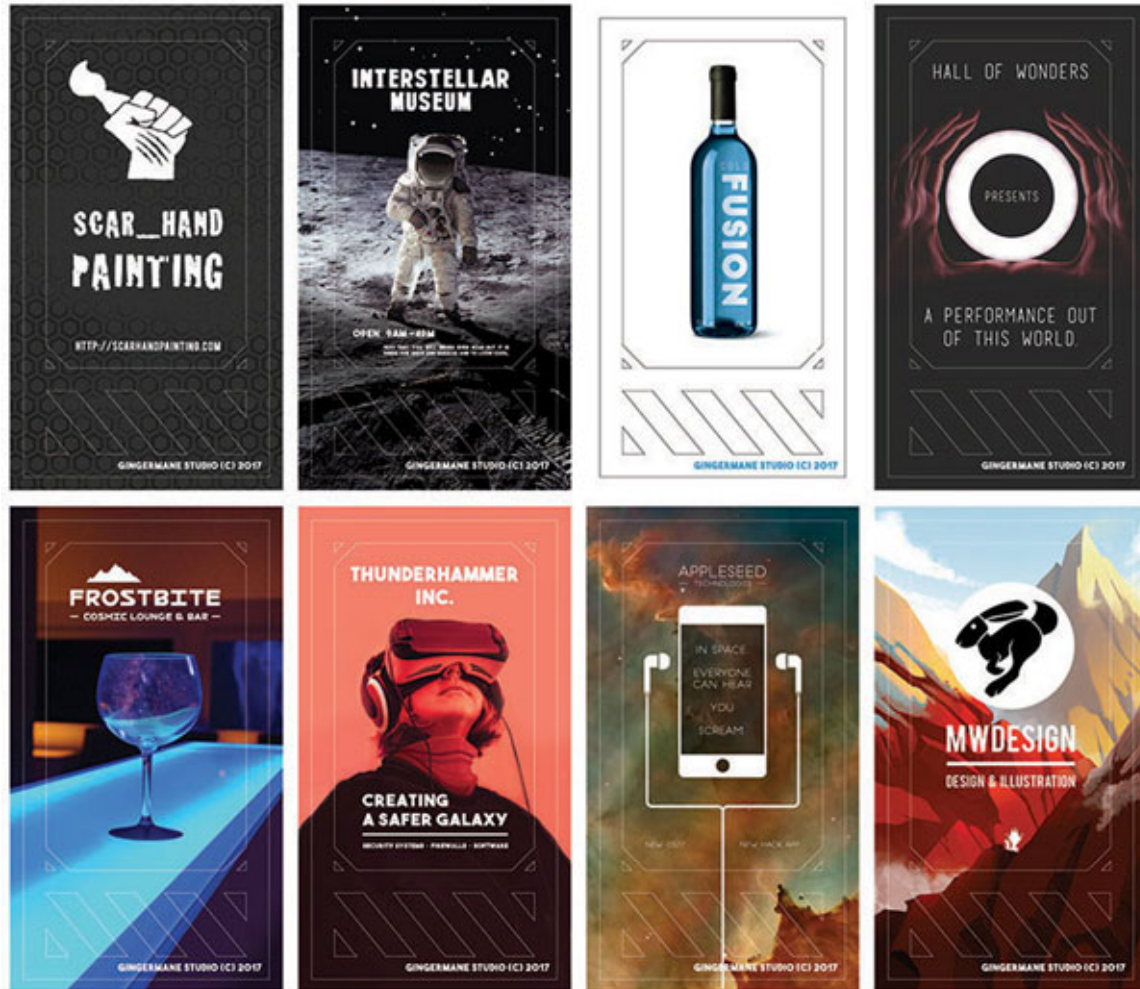

Figure 3.6: Small square ad⁸

Above the fold (AF)

This is the type of advertisement which is immediately visible without scrolling down and is known as *top* content. One of the costliest ad slots is located here since a user sees it first. An example of above the fold ad can be seen in [figure 3.7](#):

Figure 3.7: Example of above the fold ⁹

Below the fold (BF)

[Figure 3.8](#) clearly differentiates between above and below the fold-ads:

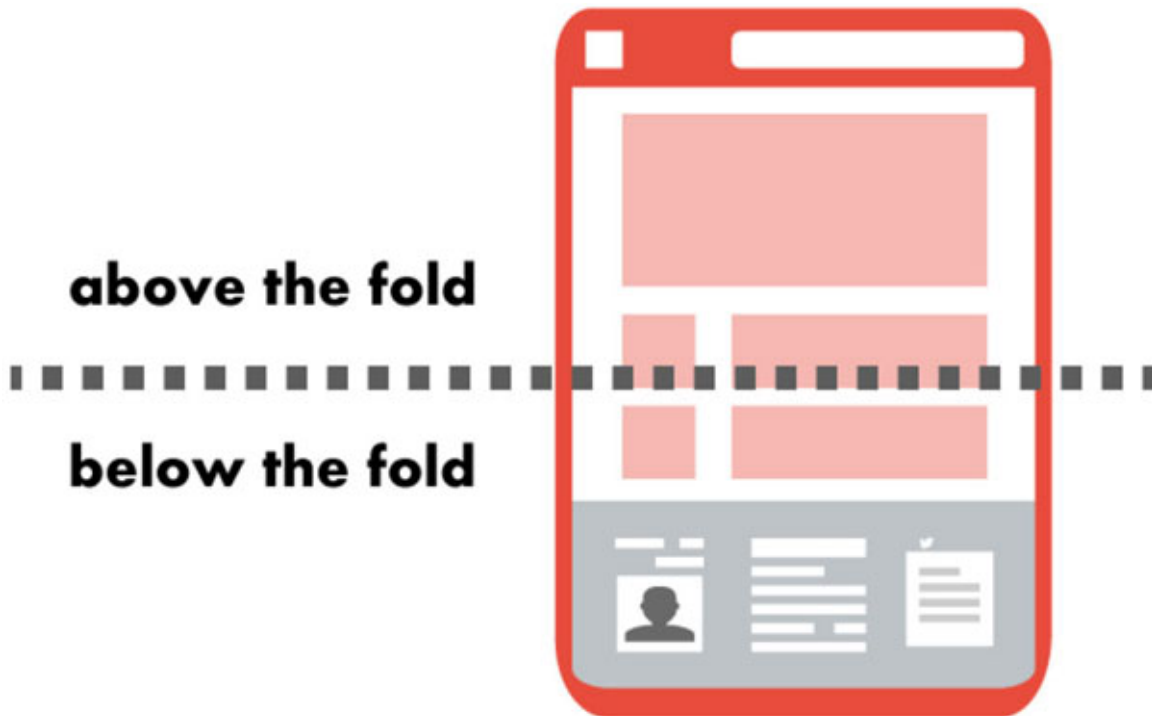

Figure 3.8: Above and below the fold ¹⁰

Ads placed below the fold might seem a waste of time, but in truth, they might have been the most cost-effective method of attracting the attention of your audience. You may insert advertising to match the content while the visitor is reading it, depending on their prior searches. As an instance, have a look at [*figure 3.9*](#):

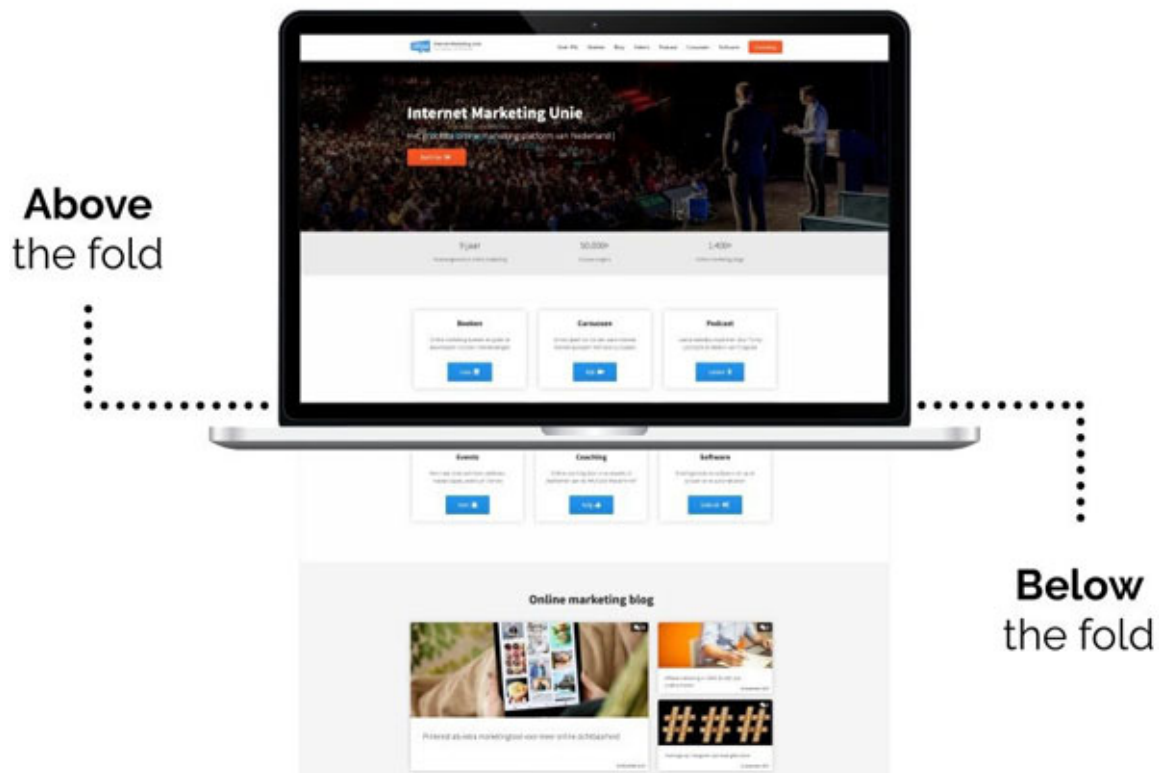

Figure 3.9: Below the fold [11](#)

[Ad Ranks](#)

Ad Rank is a value that is used to determine the position of your ad on the sponsored search results page. e.g., if your ad has the highest rank, it will be displayed on the top position on SERP and if your ad appears second in a search, your ad's rank is second. Your ad's position and whether your ad would appear in the search or not is determined by your Ad Rank.

As per *Google*, these are the most important elements in determining your Ad Rank:

- **Bid amount/Ad Rank thresholds:** The lowest sum you must bid in order to be considered for a certain job. When bidding on a \$2 term, you cannot bid 10 cents and get ranked first. With Ad Rank thresholds on

particular keywords, your bid amount may be more essential than the parameters listed as follows, based on the context of a search.

- **Ad quality:** **Click-Through Rate (CTR)**, relevancy, and the user experience on the landing page are all important considerations. Basically, your quality rating. [Figure 3.10](#) illustrates the components of ad quality score:

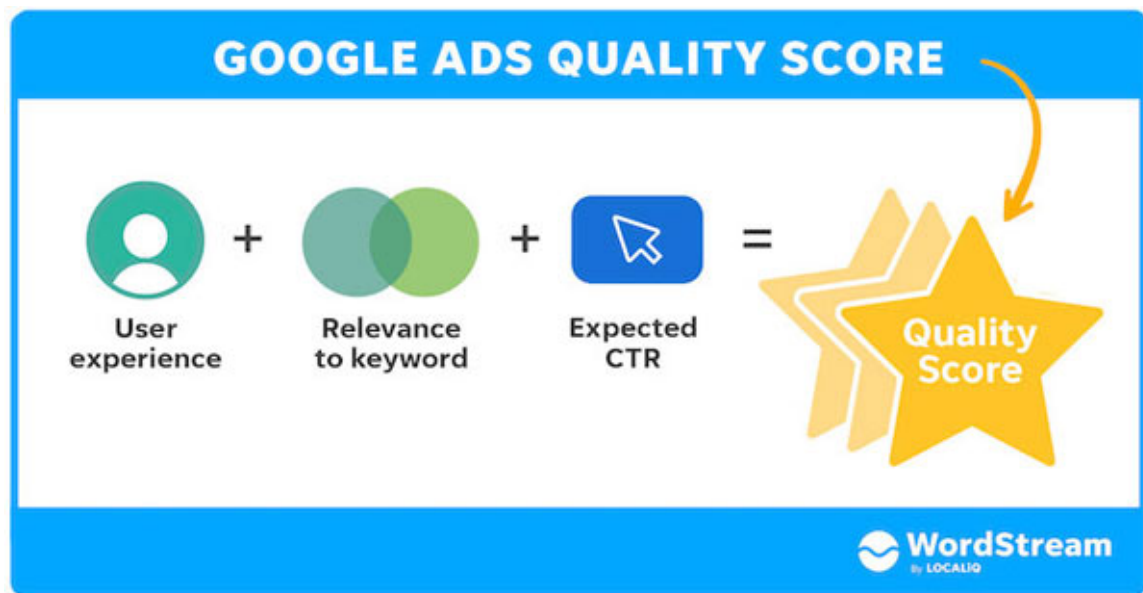

Figure 3.10: Ad quality score [12](#)

- **The context of search:** Contextual search relates to the capability of the search engines to present results depending on the user's wishes, requirements, and prior actions.
- **Ad extension impact:** Is content relevant and it boosts the CTR above what is expected.

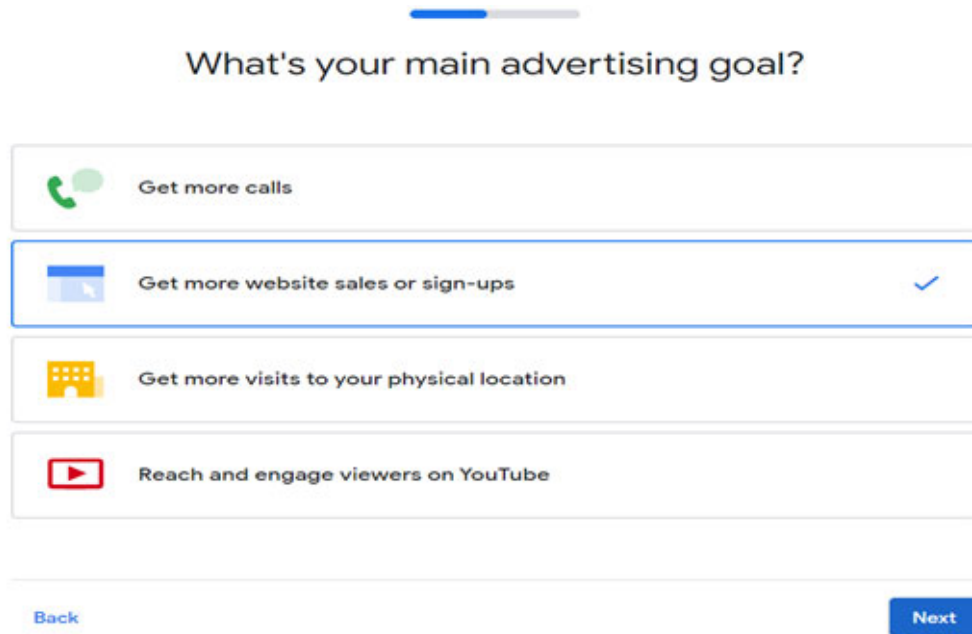

[Creating ad campaigns](#)

A marketing campaign is more than just distributing flyers or having a website. It is about building a relationship with your consumers. Customers will remain loyal to you for a long time if you earn their confidence and respect. Earning trust and respect, however, requires generating advertising campaigns that communicate the company's message or purpose. A company's ad campaigns can help to set it apart from the competitors. You should think about why you started your firm and how you want others to see it while planning an advertising strategy.

- **Determine who your ideal consumers are:** Consumers who are most likely to buy your products and services are known as *target customers*. Get to know your consumers by conducting online and offline surveys.
- **Identify the most effective means of reaching your intended audience:** Ads on television, social media, print, radio, direct mail, and the internet may all be used to market products and services. Marketing expenditures may be reduced while profit margins are boosted if you know where to spend your money in the most effective ways.
- **Choose a company name and logo :** This will help potential consumers quickly identify and associate with the business. In order for your firm to stand out from the competition, you need a strong brand that conveys your message. Promote your company's brand by coming up with a catchy phrase and logo.
- **Focus on your advertising message :** This has advantages that appeal to most target markets by doing market research.
- **Creating marketing materials:** Promote an organization's products and services by creating marketing materials. Depending on the advertising medium you pick, you will need to generate different kinds of content.
- **Marketing strategy:** To determine the most effective advertising campaigns, conduct a series of tests on a variety of target audiences and advertising venues. In order to boost sales or awareness, you might have to alter your marketing strategy. You may select which markets to remain in by reviewing sales and marketing data.

The steps to follow for creating an ad campaign using *Google Ads* are as follows:

1. Select your advertising goal as shown in [*figure 3.11*](#):

A progress bar at the top shows the first step is complete. The title is "What's your main advertising goal?". There are four options, each with an icon and a text label. The second option, "Get more website sales or sign-ups", is selected and has a blue checkmark on the right. At the bottom are "Back" and "Next" buttons.

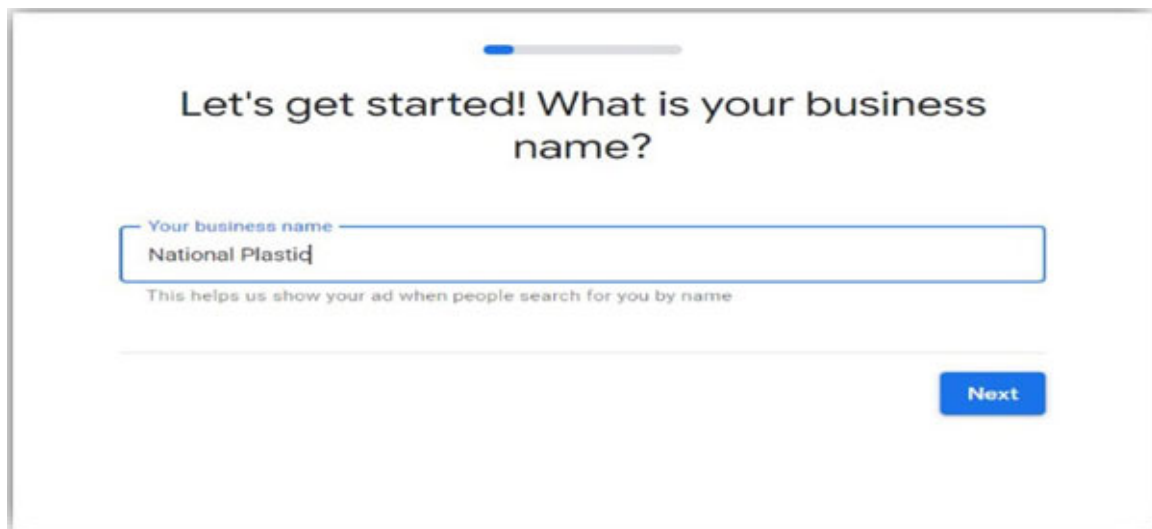

What's your main advertising goal?

- Get more calls
- Get more website sales or sign-ups ✓
- Get more visits to your physical location
- Reach and engage viewers on YouTube

Back Next

Figure 3.11: Advertising goal selection

2. Give your business name as shown in [figure 3.12](#):

A progress bar at the top shows the first step is complete. The title is "Let's get started! What is your business name?". There is a text input field with the label "Your business name" and the text "National Plastid". Below the input field is a hint: "This helps us show your ad when people search for you by name". At the bottom right is a "Next" button.

Let's get started! What is your business name?

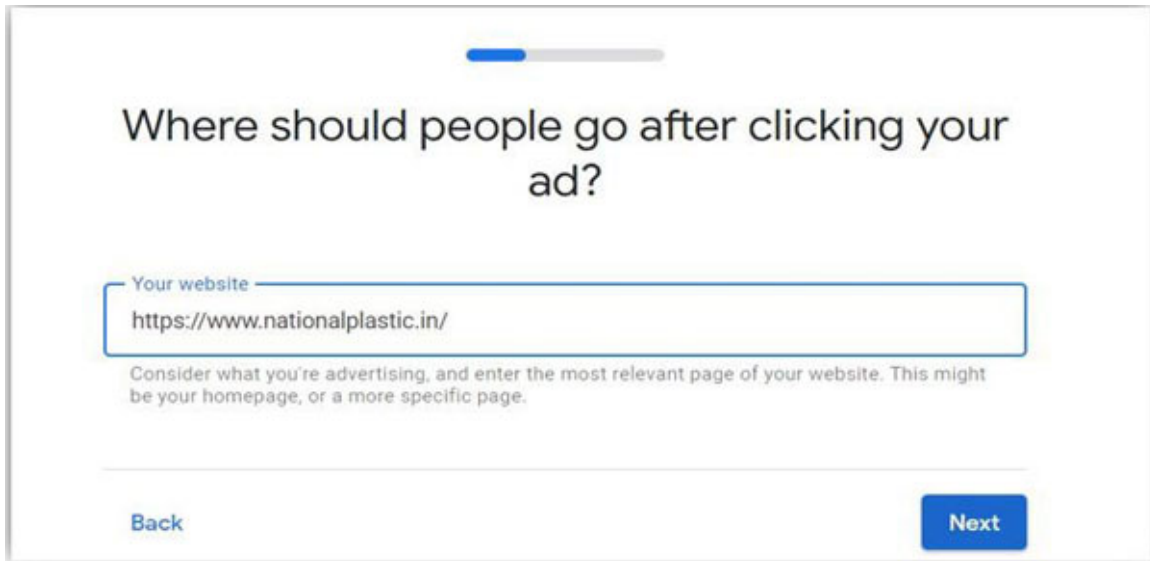

Your business name
National Plastid

This helps us show your ad when people search for you by name

Next

Figure 3.19: Final ad review

Campaign report generation

Campaign reports make it easy to keep tabs on the progress of the campaign at a glance. Depending on your preference, you may either get a summary of all the campaigns sent out over a certain time period or a day-by-day breakdown. In the report, you will get data on things such as campaign shipments, participation, conversions, and problems. Caching the report's data allows you

to see data created up to four hours earlier, hence, enhancing dashboard speed. Other activities taking place at the time of receiving the report might make it take up to 6 hours to complete.

Generate reports

The campaigns may be seen on the campaign's list page. The dashboard for the CleverTap report generation tool can be seen in [figure 3.20](#):

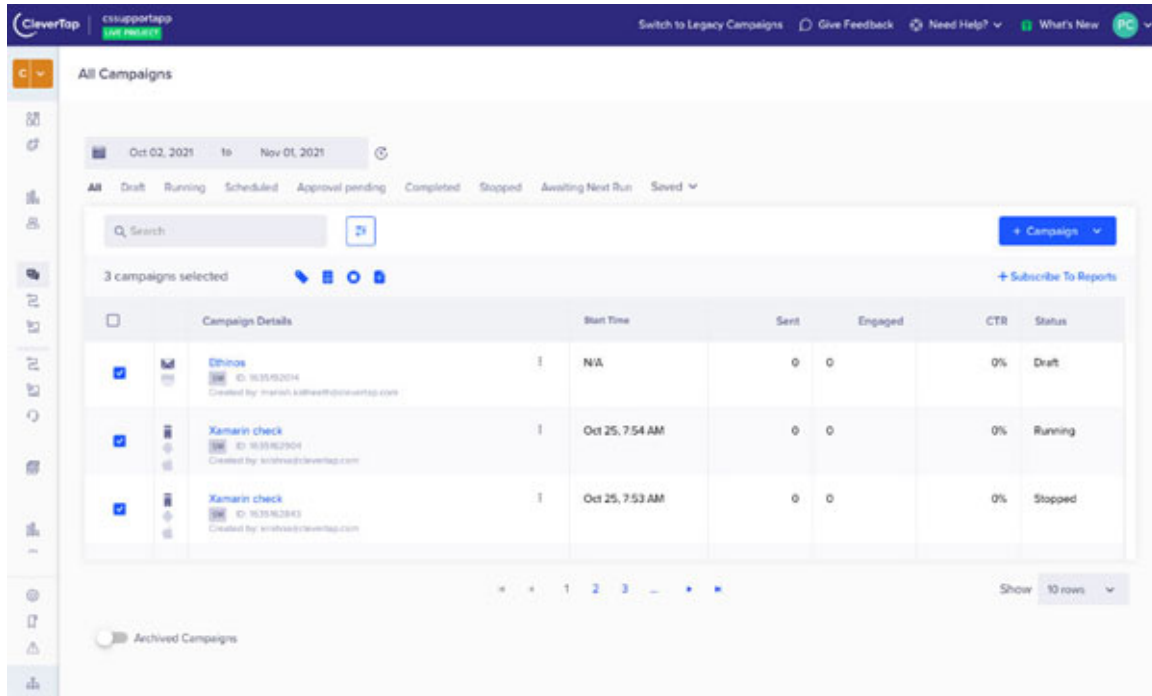

Figure 3.20: Dashboard for report generation¹³

To see a report, follow the following instructions:

1. Go to the main menu and choose **Campaigns**. The list of campaigns page is shown.
2. Make your selections for the report or choose a filter.
3. Click on **Email Report** or **Subscribe To Reports**. The **Campaign Summary Emails** pane appears as shown in [figure 3.21](#).
4. Then set up the campaign report from the Setup tab.
5. Select the report criteria. Please refer to the following figure:

☐ Recurring

Send Report **Cancel**

Figure 3.21: Campaign summary email section showing different criteria to be filled¹⁴

Display marketing

Using graphical displays to advertise is known as display marketing. Pictures, videos, animations, text links, and moving images are being used to promote products and services on a variety of end devices, including desktop computers and smartphones. It is possible to charge for the display using either **Cost Per Click (CPC)** or **Cost Per Mille (CPM)**. Display advertising may also be

calculated based on conversions, as in affiliate marketing. Increased visibility and exposure for the brand are the major objectives of display marketing¹⁵.

Types of display ads

Paid advertisements are of two types: Display ads and native ads.

Display ads are superimposed on the webpage content, whereas native ads are the ads that appear as a part of the design of the Webpage. Display ads are used for interest targeting, topic targeting, and contextual targeting.

Native ads include Twitter hashtags, Instagram and Snapchat stories, and so on. You can see the Grammarly native ad from this screenshot ([figure 3.22](#)) :

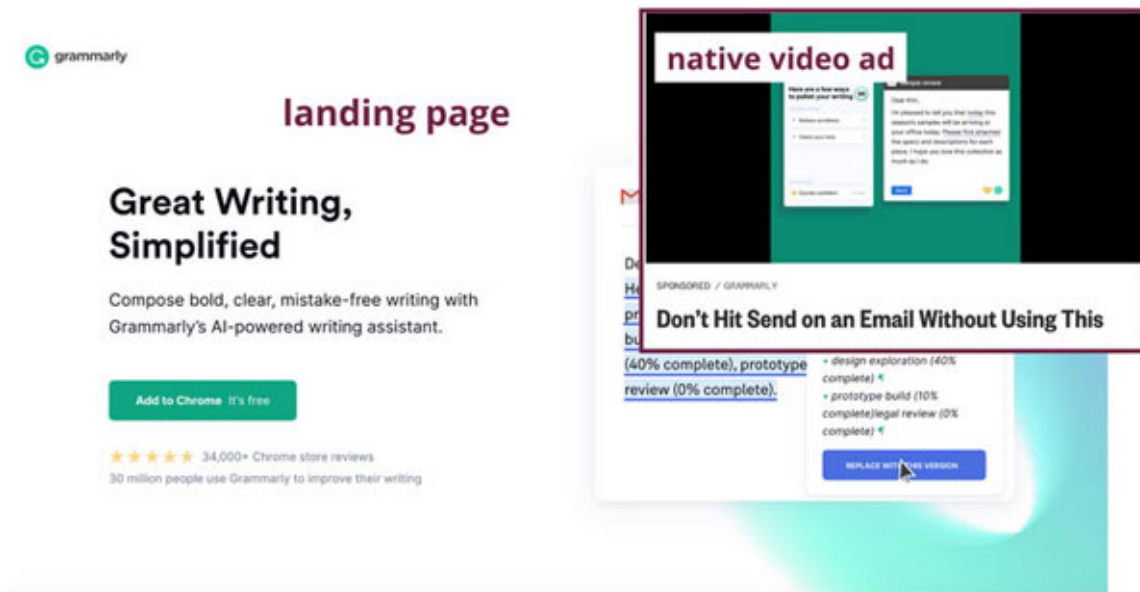

Figure 3.22: Native ad¹⁶

Static/standard banner ads

The banner is the static visual ad that appears at the top of the Web page with the purpose of attracting attention. In most cases, static banner advertising is single images that do not include music or video. An example of a static banner ad can be seen in [figure 3.23](#):

Figure 3.23: Standard banner ads¹⁷

Animated ads

Whenever it comes to grabbing the attention of a target audience, animated adverts are a step ahead of static banners. In order to combat banner blindness, the animation is a great way to have your target audience study the creativity. The combination of animations and music may also be used to make longer advertisements that explain a product, method, or issue in more detail. [Figure 3.24](#) shows an example of animated ads:

Figure 3.24: Animated ads¹⁸

Interactive ads

Goods or services may be quickly incorporated within an interactive ad because of their integrated features.

Playable commercials are one kind of interactive advertising. For mobile games, ads often include the playable sample, enabling viewers to try out a small portion of the game's UI. Ads that may be played in other games or even on gaming websites are becoming more common. [Figure 3.25](#) shows examples of interactive ads:

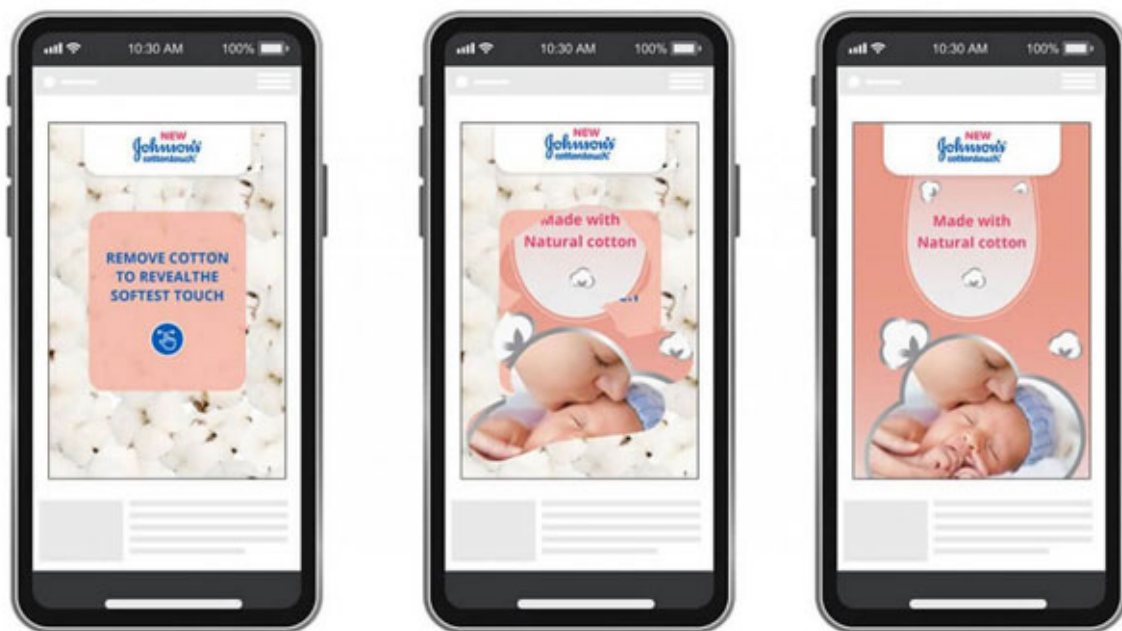

Figure 3.25: An Example of interactive ads¹⁹

Video ads

Video advertising now has the added benefit of being accessible to almost everyone because of the widespread availability of smartphones with decent video capturing capabilities. Thousands of individuals use their mobile phones to film, edit, and post video material, including commercials.

Expandable ads

An expandable ad is a rich media ad that could be stretched to fill the whole ad space. A number of expandable advertisements may be set to automatically expand whenever the page loads. Others would grow as a result of an interaction triggered by the user.

The *invitation state* for expanded advertising is when they appear in a tiny ad unit on a page. Initiation causes the ad to “grow” and take up more space over the page, sometimes doubling or tripling in size. [Figure 3.26](#) illustrates how an expandable ad responds to a click:

*Figure 3.26: Expandable ad*²⁰

Lightbox ads

Expandable Lightbox ads were created by Google in 2012 for usage on *Google Display Network* and had since then become a popular ad style. [Figure 3.27](#) shows an example of Lightbox ads:

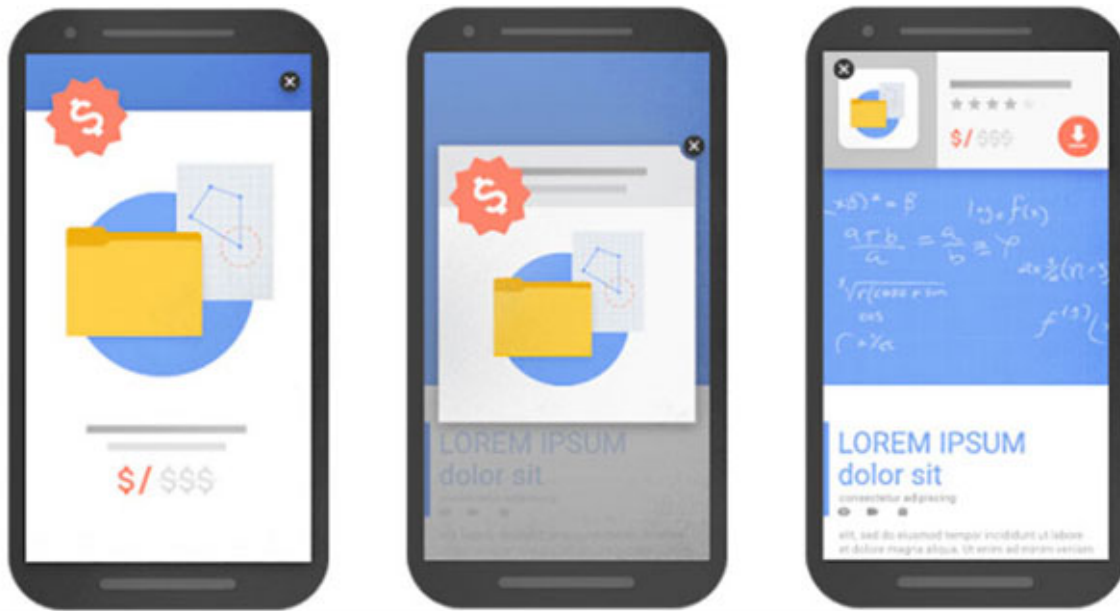

Figure 3.27: An example of Lightbox ads²¹

As soon as the user hovers their mouse over the Lightbox ad, it extends into the full-screen canvas grab ad, which may incorporate video, music, and other elements. Users should hover their mouse over the Lightbox ad for two full seconds to activate an expansion, which is designed to limit inadvertent interactions.

If you are looking for an immersive experience for your customers, lightbox advertisements are just what you are looking for.

Interstitial ads

Several of the display ad types that have evolved with the introduction of mobile technologies are interstitial advertising. It is a rich interactive ad placed in between the content on mobile apps for a rich and better user experience. An example of this type of ad can be seen in [figure 3.28](#):

Figure 3.28: An example of interstitial ads²²

To put it another way, interstitial adverts are full-screen advertising that covers a host application's UI. They appear at the natural transition moments in the course of the user's interaction with an app.

360-Degree video ads

You may use 360-degree video advertisements to provide your viewers the opportunity to participate in content in a more active way than with traditional video ads. Mobile consumers may engage directly with the 360-Degree video commercials by twisting their phones or moving about in space, which is activated by a gyroscope in the phones, as shown in [figure 3.29](#):

Figure 3.29: 360-Degree video ads²³

Buying models

The technique of purchasing media in order to get visibility is known as *media buying*, which might be taken literally. It is possible to leverage such media exposure to advertise items or raise brand recognition via it. Media purchasing models include the following, as shown in [figure 3.30](#):

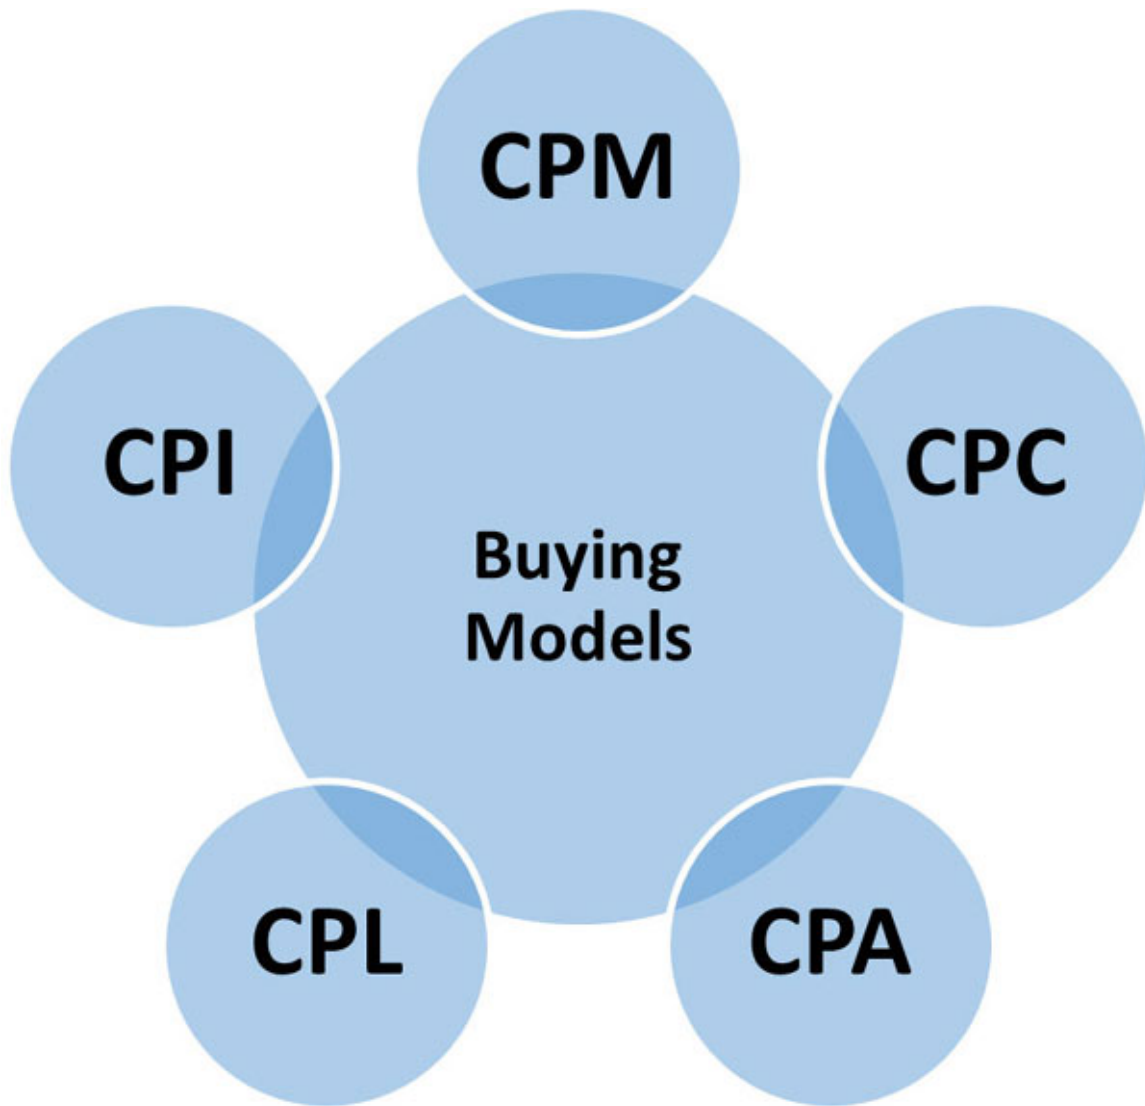

Figure 3.30: Buying models

Cost Per Mille

Cost per Mille (CPM) also known as cost per thousand impressions (the M is indeed a Roman numeral abbreviation for 1,000). For digital media purchases, CPM is by far the most prevalent method of payment. All the time your ad appears in the app or on the Web page, you pay the fee for that particular instance of exposure. Gets easy, yet the company is charged regardless of whether or not the consumer really sees what they are going to buy. Even if a user never scrolls down to see the ad, an advertiser is still responsible for the cost of the ad. If an ad's CPM is \$12, the cost per thousand impressions will be \$0.0012.

Cost Per Click

In advertising, **CPC** refers to **Cost Per Click**. A click on an ad results in a payment to the advertiser. Some marketers choose to purchase CPC rather than CPM since they feel they only pay when somebody is engaged enough in a message to request further information. Using bots or other approaches to produce clicks that are not started by actual people is one way to commit click fraud in certain CPC campaigns.

Cost Per Acquisition and Cost Per Sale

Cost per acquisition or CPA refers to acquisition of a new lead or customer. If your objective is to generate more leads then you should use this model. Cost per sale is another common buying model. You only pay if someone buys anything. Buying media that way is generally low-risk because advertisers only pay if sales are generated. Media businesses, on the other hand, do not want to sell media in one such way because they have to accept all of the risks associated with the ad purchase. No money is made through bots if nobody else buys the product.

Cost Per Lead

CPL stands for the **Cost Per Lead**, which means that an advertiser pays whenever the lead form is filled and sent. It is popular in B2B marketing to use CPL because it is improbable that a customer would make the purchase at a certain moment. As long as the bots are not trained to fill up leads automatically, it may be a very successful method of purchasing.

Cost Per Install

Advertisers (typically app developers) pay only if an app is downloaded using the **Cost Per Install (CPI)** media purchasing strategy. CPI advertising is preferred by several app company owners and app marketing managers, as opposed to alternative paid advertising methods.

You only pay if your program is installed; that sounds like a secure way to purchase advertising space on the internet. A credible vendor would choose people who are likely to utilize your app, whereas the scam vendor would offer in-app prizes if a user installs your software, which they would probably erase.

[Programmable digital marketing](#)

Programmatic marketing involves the practice of using an automated bidding system to acquire and sell ad inventory in real-time. In milliseconds, brands and agencies can buy ad impressions across the publisher sites and apps via a complex ecosystem²⁴.

Advantages of programmatic digital marketing

There are five benefits of employing programmatic advertising in addition to the increased efficiency provided by AI-driven algorithms and less reliance on human interaction, as shown in [*figure 3.31*](#):

Real-time insights

Traditional advertising takes a long time to receive the outcomes of advertising efforts, but there is no precise technique for determining their validity. In opposition to this, programmatic advertising provides marketers with real-time data on the effectiveness of their ad campaigns.

Enhanced targeting capabilities

You have two options when it comes to reaching out to the audience. First, third-party data may be used together to provide a more accurate picture of your target audience, allowing you to target them more effectively. Contextual advertising is indeed the second process.

Greater transparency

Advertisers may track the success of their advertising, see how the money is spent, and adjust their campaigns in real-time to obtain the results they require because they know what ad inventory they are buying and who it is for. There is also a reduction in the possibility of human mistakes since there is no human dependency.

Better utilization of the budget

Advertisers may use their cash more wisely because programmatic advertising gives them real-time campaign performance data. Their campaign money will be better used, and they will get a higher return on their investment as a result of this smart investment.

Tackle ad frauds effectively

Illegal tactics in digital advertising make it difficult to trust this medium's advertising messages. Advertisers have often been conned by publishers that use a variety of deceptive strategies. Please refer to the following figure:

Figure 3.31: Advantages of programmable digital marketing²⁵

Analytical tools

Digital marketing analytic tools are used for tracking and analyzing performance data for measuring success and diagnosing the potential problems of marketing campaigns. The performance measures include the number of visitors on the website, customer purchases, customer touchpoints, and so on.

Analytical tools focus on key business requirements and provide a reliable solution for managing real-time data.

Google Analytics

Using Google Analytics, you can track and analyze your website's performance in order to improve your SEO and also marketing efforts. The person with a Google account may use free service, which is a component of the *Google Marketing Platform*. You can track and report website traffic, as shown in [figure 3.32](#):

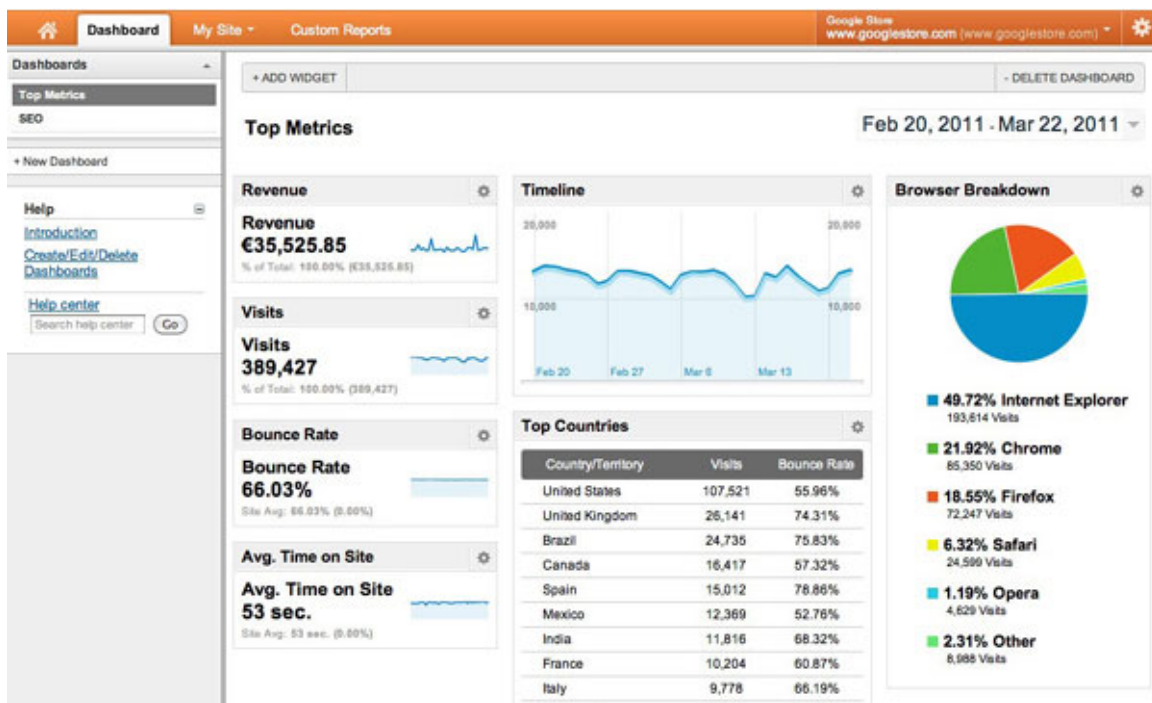

Figure 3.32: Google Analytics dashboard²⁶

Mixpanel

Mixpanel is the SaaS product's analytics tool of choice for analyzing user interaction data. Mixpanel specializes in real-time event monitoring for websites and apps. The dashboard of Mixpanel can be seen in [figure 3.33](#):

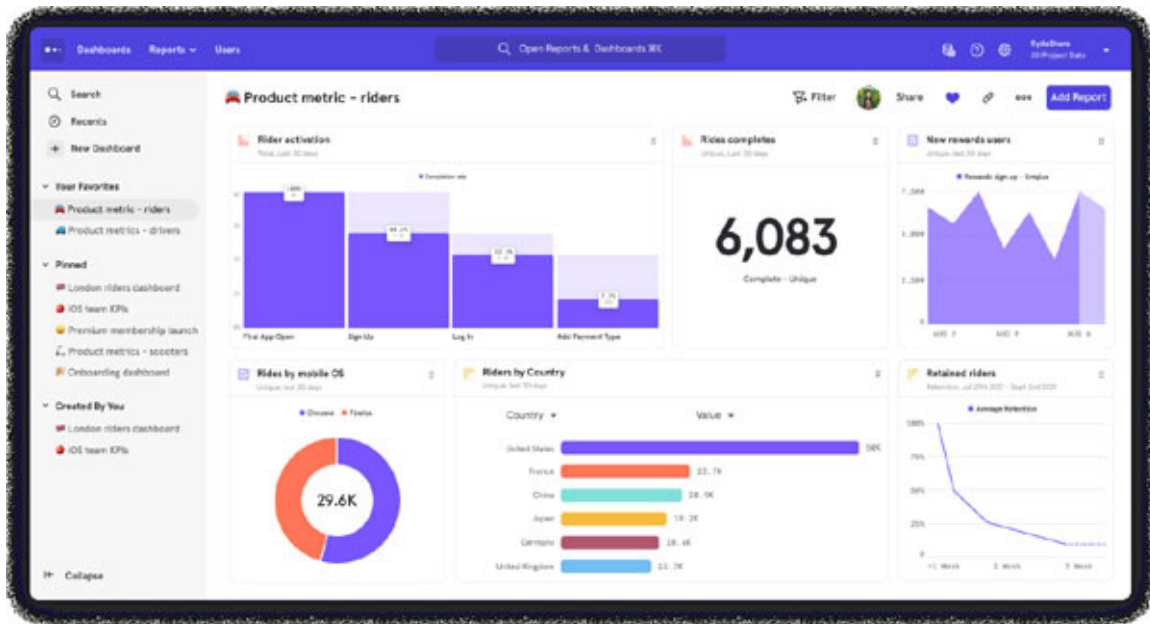

Figure 3.33: Mixpanel dashboard²⁷

In addition to tracking the number of times a person has visited a site and the length of their stay, Mixpanel can also keep tabs on things like signups. If a user uploads a photo or leaves a message on a blog or social media post, this app keeps track of everything the user does there.

The AdWords Performance Grader

Using the *Google Ads Performance Grader*, Google marketers may see how their campaigns stack up against best practices in **Pay-Per-Click (PPC)** advertising. It is a free tool that generates easy-to-read reports and overall grades. The dashboard of AdWords Performance Grader can be seen in [figure 3.34](#):

Figure 3.34: Google AdWords Performance Grader²⁸

Heap analytics

Heap is a digital insight platform that provides a 360-degree view of your consumer's journey by analyzing qualitative as well as quantitative factors. Your whole data set is analyzed by Heap in order to provide previously unobserved insights, allowing you to take action with certainty. Everything your users do, such as page views, clicks, swipes, and form submissions, can be tracked and monitored using Heap. [Figure 3.35](#) shows the dashboard of heap analytics:

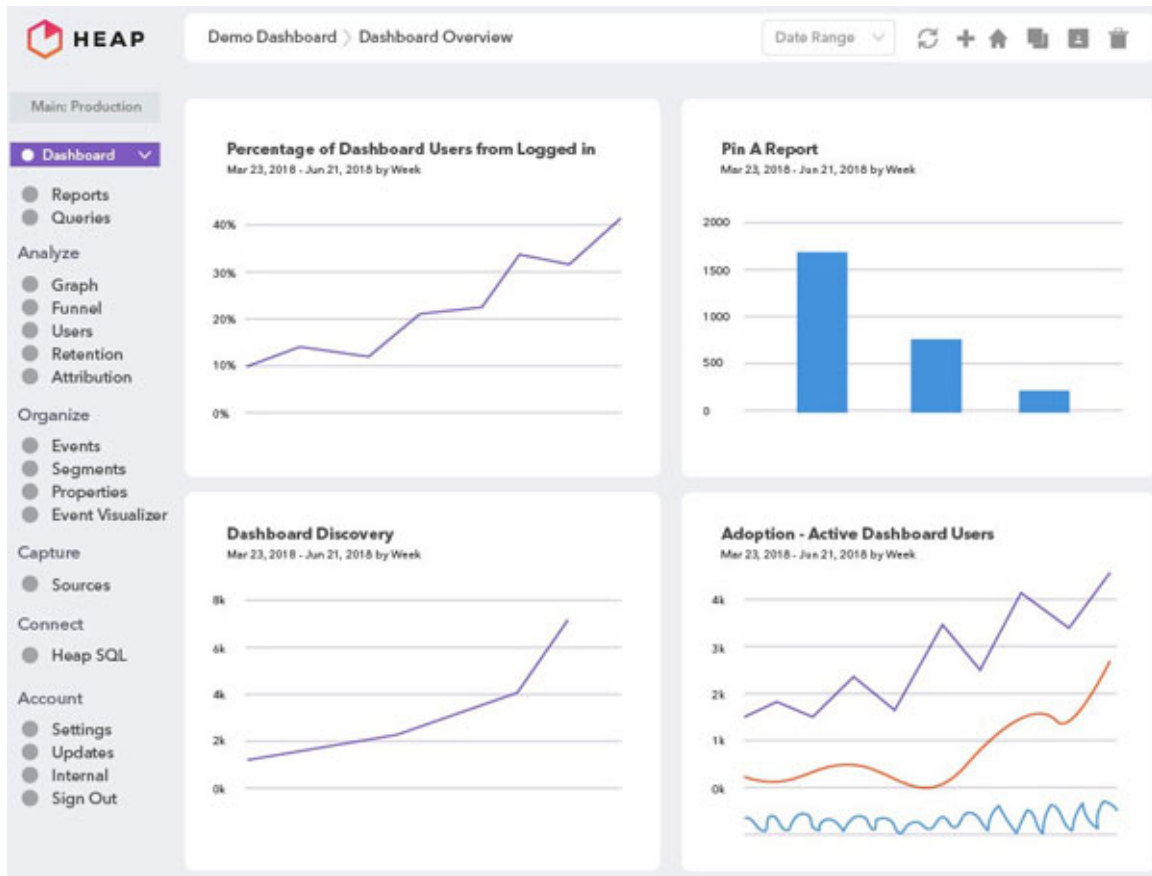

Figure 3.35: Heap Analytics²⁹

Cyfe

For small and medium enterprises, Cyfe is the cloud-based dashboard tool that allows users to keep track of all marketing channels, including **Search Engine Marketing (SEM)**, **Search Engine Optimization (SEO)**, email marketing, site analytics, and also the social media, amongst many others. The dashboard of Cyfe can be seen in [figure 3.36](#):

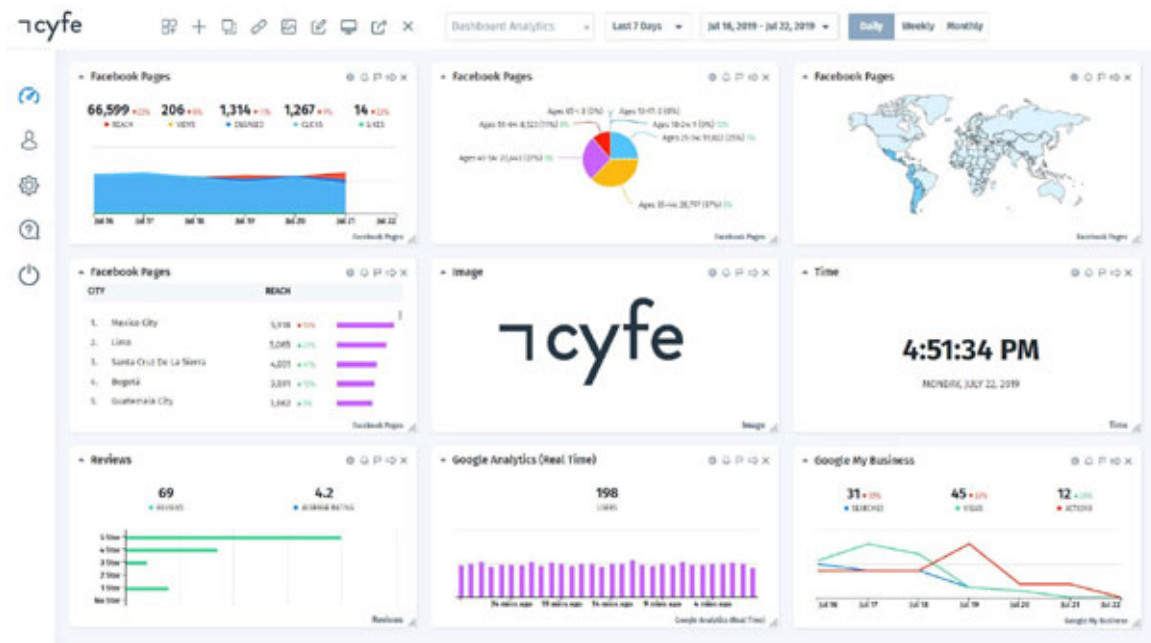

Figure 3.36: Cyfe dashboard³⁰

BuzzSumo

Cloud-based platform BuzzSumo lets you find the finest engagement, information, and outreach options across social media and search engine results. While keeping an eye on what matters most to your company, discover fresh keywords, popular articles, consumer inquiries, and content success.

[Figure 3.37](#) shows a dashboard of BuzzSumo:

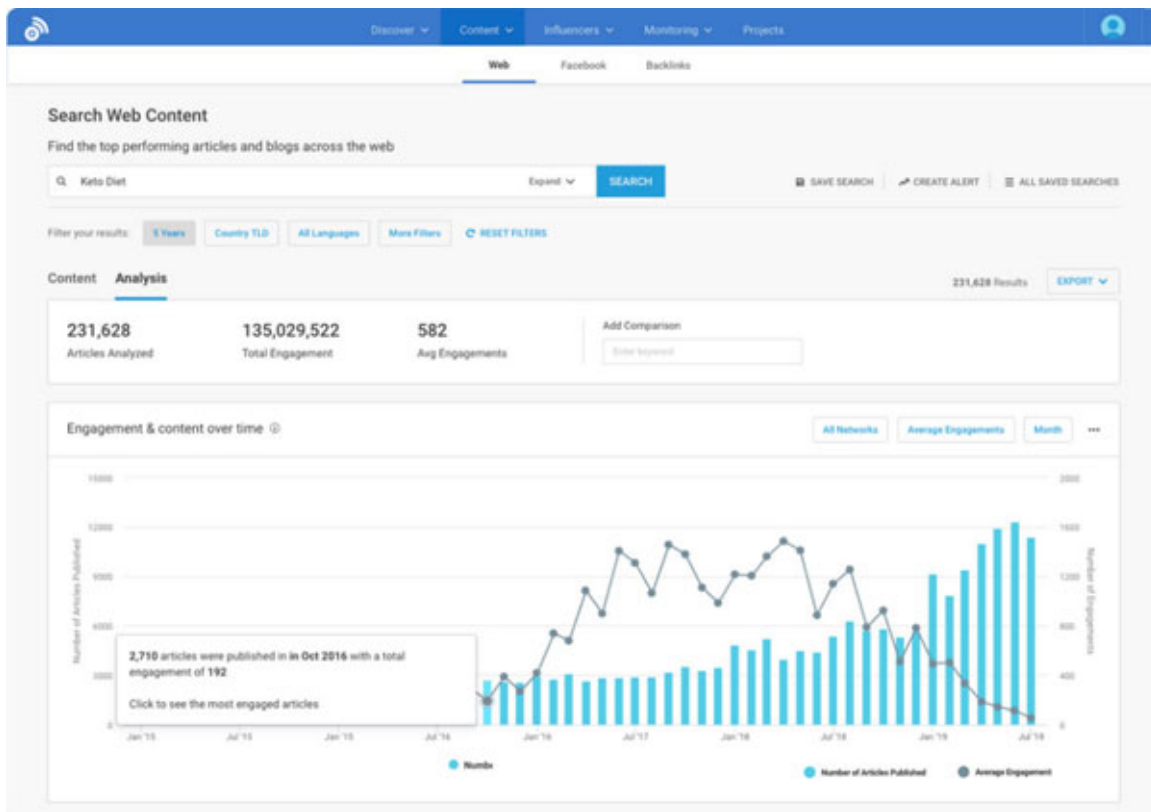

Figure 3.37: The dashboard of BuzzSumo³¹

BuzzSumo reveals the methods your rivals are doing to get in their intended audience. This offers you an advantage over your competition, allowing you to reach and use the resources before they do. As a result, you have the potential to rise to the position of significant market influencer.

Klipfolio

Klipfolio is indeed a cloud-based Web software that enables you to find success with data. Understanding, displaying, and monitoring the KPIs and indicators that are most important to your company can help you grow. Your data may be gathered and analyzed in real-time using Klipfolio's dashboard, as shown in [figure 3.38](#):

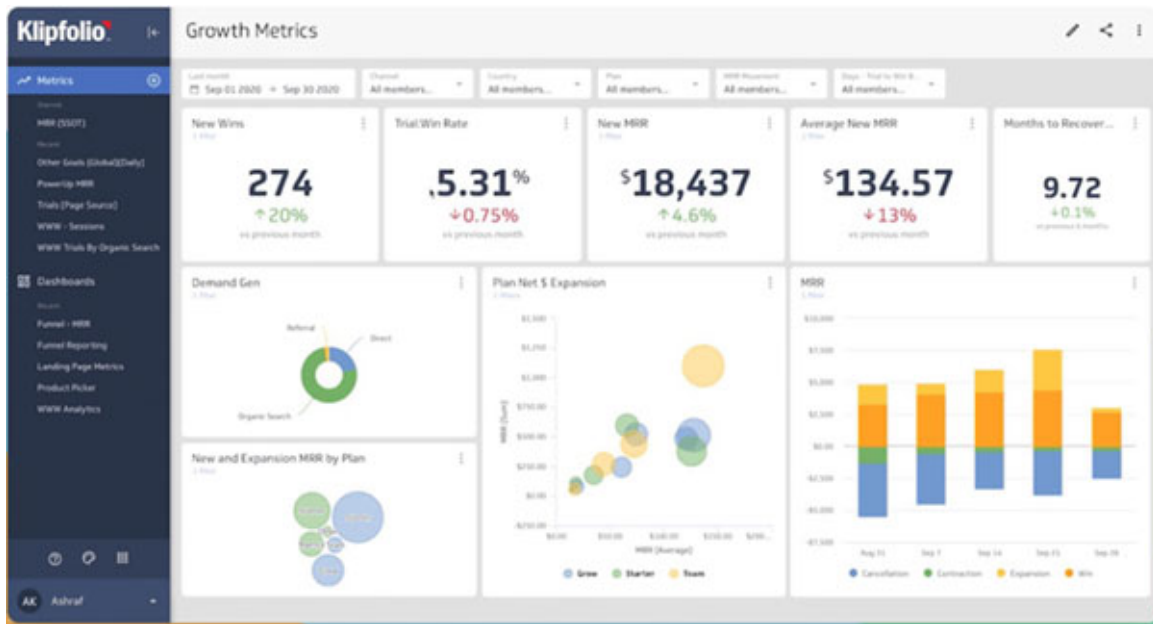

Figure 3.38: Klipfolio marketing dashboard³²

Optimizely

Developers may use Optimizely to create and conduct A/B tests on their websites. The goal of this is to provide proof that attempts to improve conversion rates are working. Using Optimizely's dynamic or basic capabilities, you may design a range of tests for your websites. The dashboard of Optimizely, as shown in [figure 3.39](#):

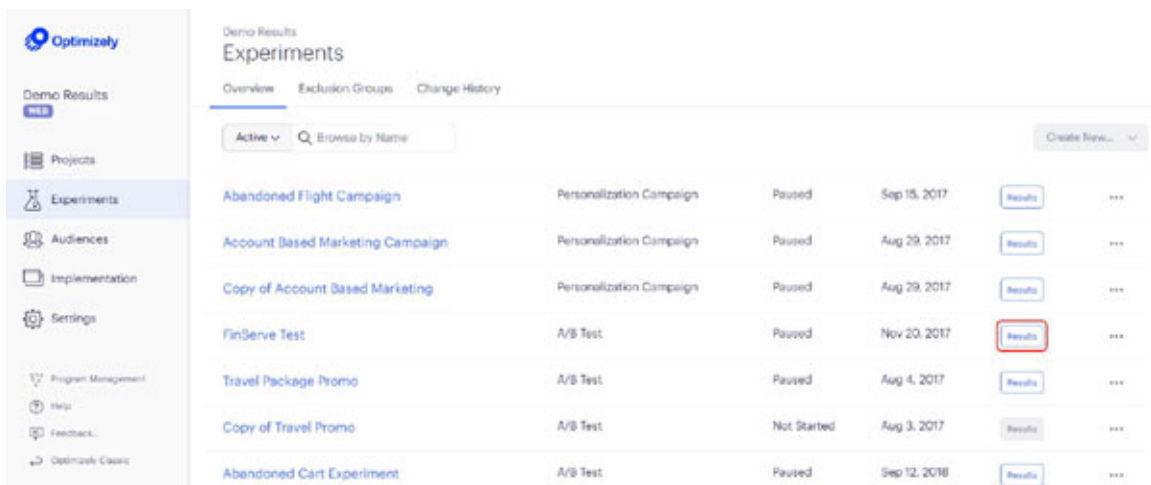

Figure 3.39: Optimizely dashboard³³

A/B testing, also known as split testing, is a marketing experiment wherein you split your audience to test a number of variations of a campaign and determine which performs better.

Semrush

An all-in-one solution for enhancing internet visibility and uncovering marketing insights, Semrush is indeed an essential tool. Marketers in the following fields can benefit from our resources and reports: PPC, **Social Media Marketing (SMM)**, SEO, competitive research, keyword research, marketing insights, content marketing, and campaign management are all included. [Figure 3.40](#) shows a Semrush dashboard:

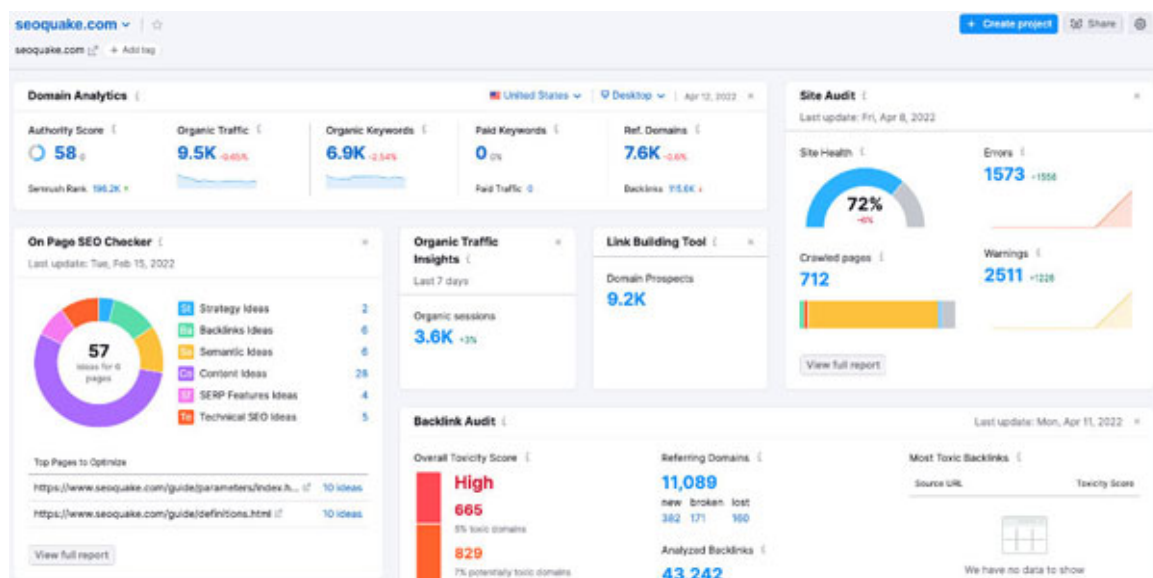

Figure 3.40: Semrush dashboard³⁴

Crowdboost

Crowdboost is a tool to optimize social media marketing and measure the success of Facebook and Twitter posts. Retweets, likes and comments, and also the number of shares the Facebook post got may all be tracked using Crowdboost, which is a social media monitoring tool. The sample dashboard of Crowdboost can be seen in [figure 3.41](#):

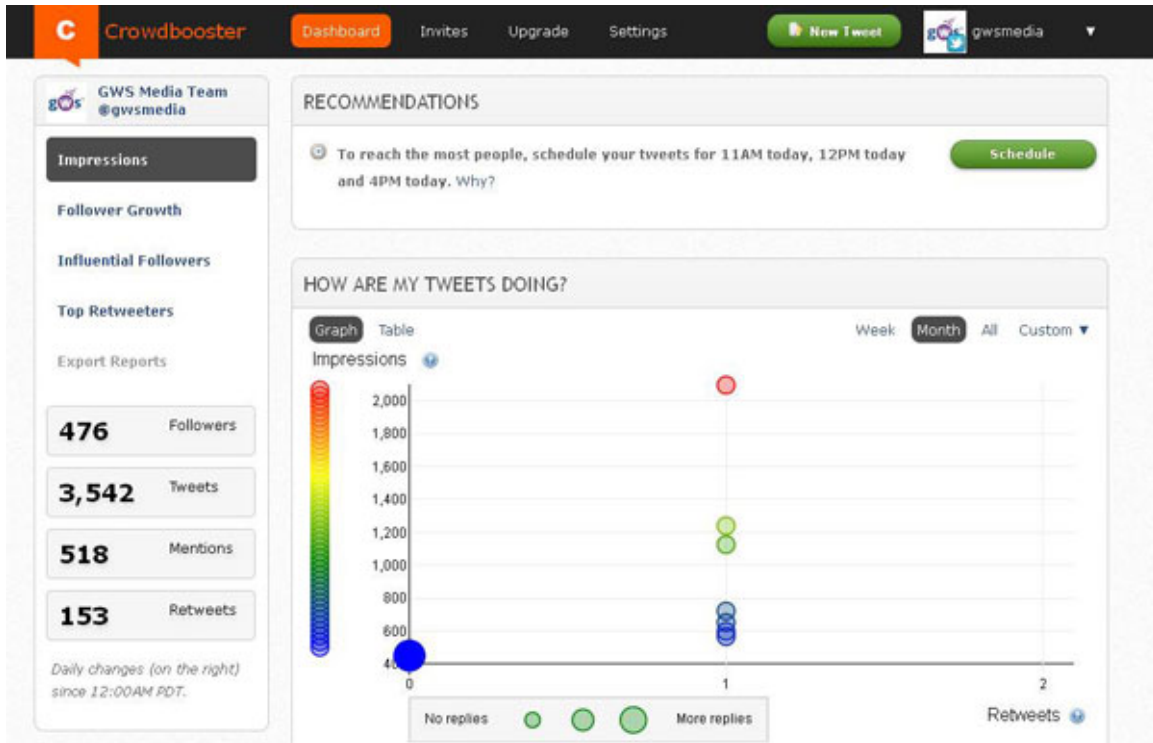

Figure 3.41: Crowdbooster dashboard³⁵

YouTube marketing

In order to increase the visibility of a company or product, YouTube marketing entails generating videos and submitting them on the site. It aids businesses in generating more traffic, expanding their clientele, and reaching out to new markets.³⁶ The graph showing increase in the number of YouTube users can be seen in [figure 3.42](#):

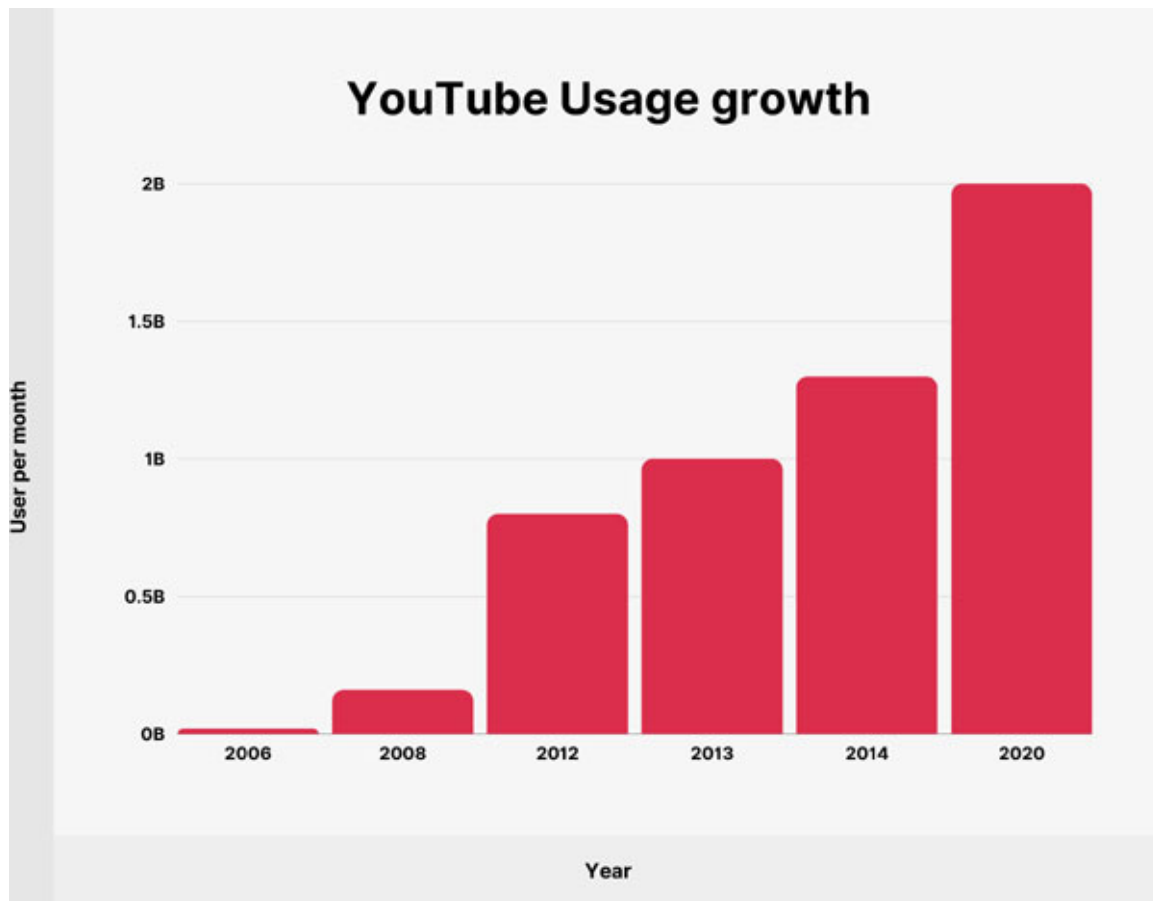

Figure 3.42: Increase in growth of YouTube users with year³⁷

Benefits of YouTube marketing

Among the most powerful marketing channels is the YouTube platform. Businesses may increase their visibility and expand their reach by using SEO-friendly headlines, tutorials, comments, product reviews, Q&As, and video listicles. The brand's videos have no way of knowing who will see them or when. If the video's title and description include the right keywords, someone searching for the information is more likely to find the video, watch it, and then go out and purchase the product it promotes. With the use of watermarks and logos, companies may increase their brand recognition.

Video results show up in the Google search results, allowing businesses to get greater exposure and bring in new customers. Leads may visit the website after seeing your YouTube videos to learn about the items. Videos that follow the norms and regulations of the video-sharing site would remain there.

As YouTube is a global platform, it gives marketers the ability to expand their reach to new markets. Leads from all over the world who share a common language are attracted to the site.

YouTube's main advantage is that it gives you the opportunity to efficiently market your business. Create and upload content on your channel or run pre-roll advertising on the platform to get the attention of your viewers.

YouTube advertising campaign

YouTube ad campaign allows the user to reach and engage potential customers. A campaign to be successful, you should include tagging the right audience, budget and bidding, and a video ad to achieve your marketing goals. For creating a YouTube ad campaign, you should follow the following steps:

Upload your video ad to YouTube

Before you start configuring your ad campaign, it is best to upload your marketing video to your YouTube account. [Figure 3.43](#) shows a screenshot of how you can upload a video:

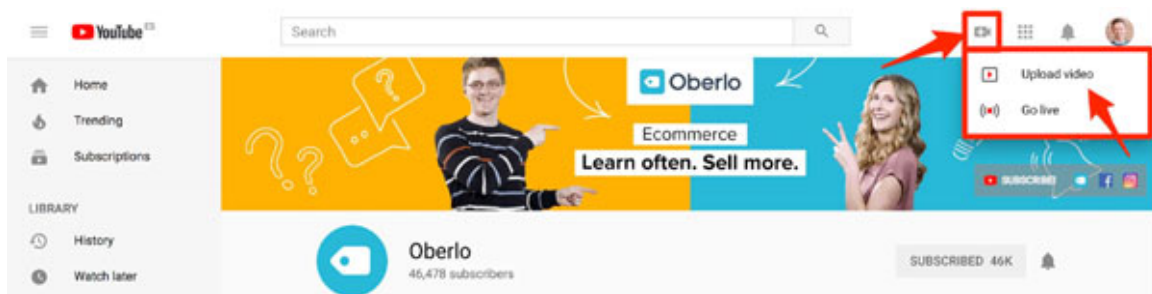

Figure 3.43: How to upload video on YouTube

You will be taken to the upload window, where you can select the file you want to upload, as shown in [figure 3.44](#):

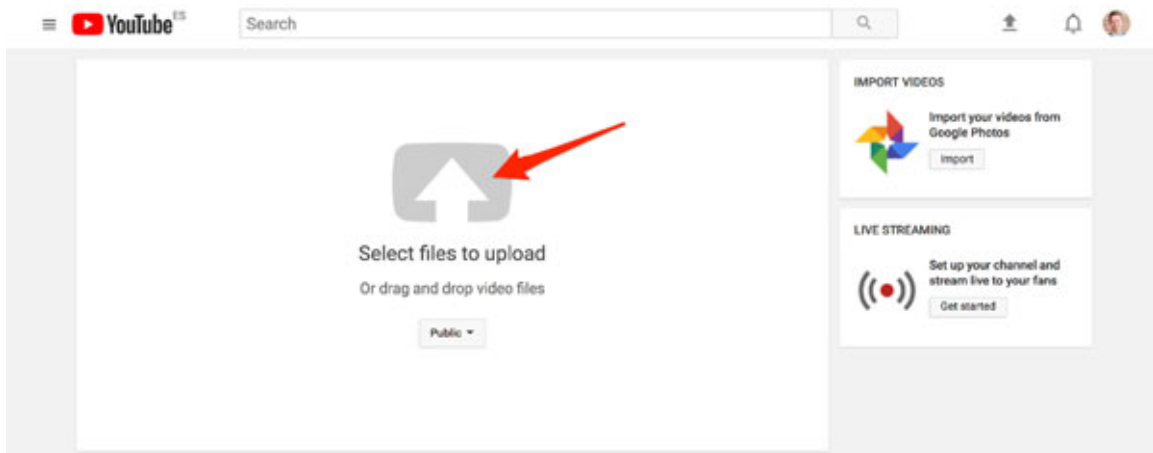

Figure 3.44: Selecting a file to upload

Create a new campaign in Google Ads

Once you have uploaded your video, you are ready to set up your YouTube ad campaign. [Figure 3.45](#) shows a screenshot of the Google AdWords dashboard:

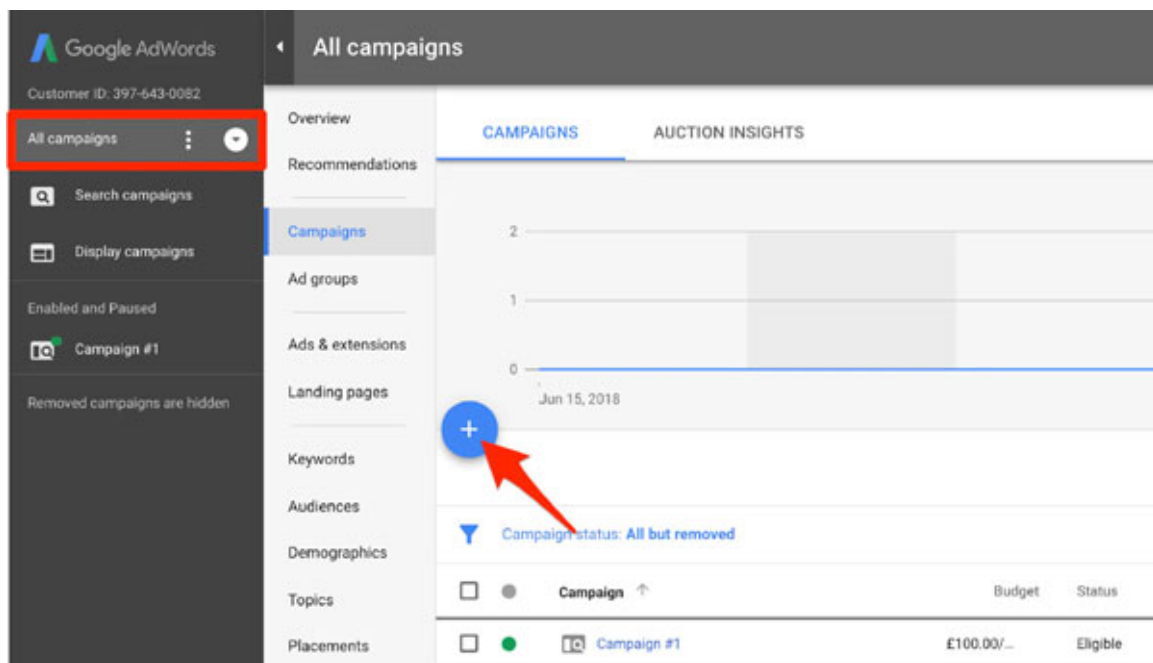

Figure 3.45: Google AdWords dashboard

Once you have clicked **Video**, you need to select a single goal that corresponds to the main thing you want your campaign to achieve for your business. You must be clear with what you want your campaign to achieve. You may select your goal as increasing brand awareness, generating leads, or increasing

website traffic. [Figure 3.46](#) illustrates how you can select a goal for your campaign:

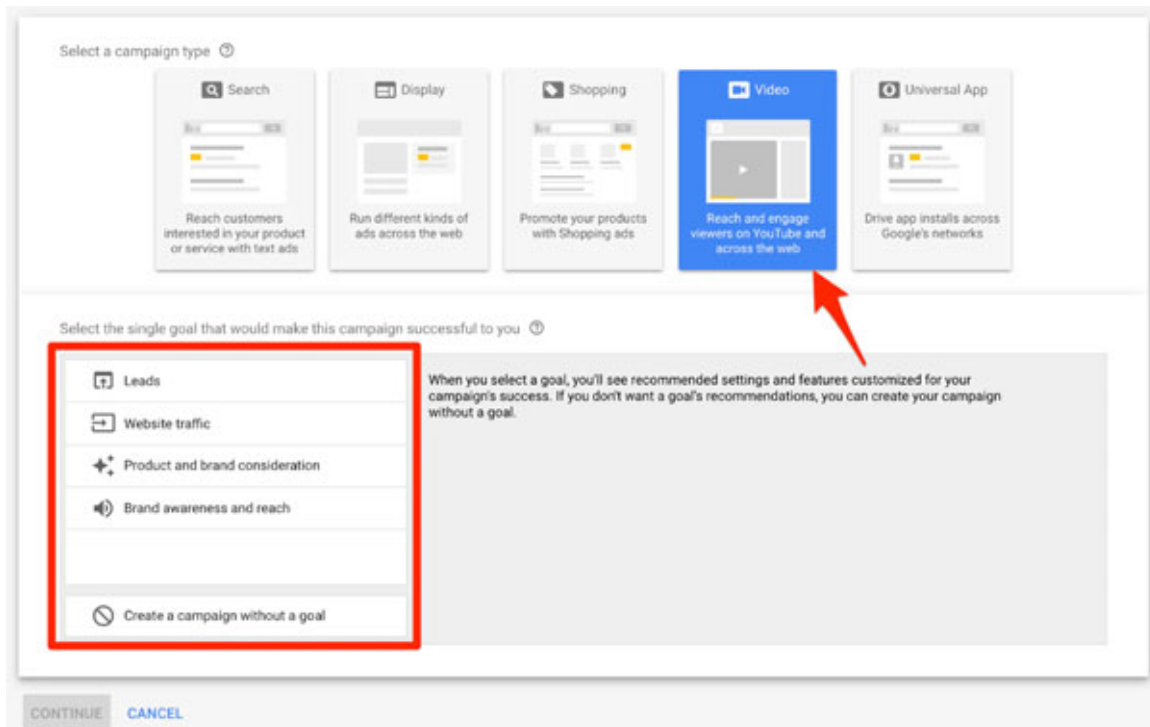

Figure 3.46: Selecting a goal of the campaign

Configure your campaign

In this step, you have to configure your campaign by choosing a relevant name for your ad campaign ([figure 3.47](#)), followed by setting up the daily budget and selecting the network (For example, YouTube homepage, YouTube channel page, and so on) and selecting the language your customer speaks and geographical location of your potential customers.

Figure 3.47: Configure the campaign by defining a name

[Figure 3.48](#) shows how you can plan your marketing dollars by setting up your daily and monthly budget:

Budget

Type
Daily ▾

Enter the average you want to spend each day

£ 10.00

^ Delivery method

☐ Standard

☒ Accelerated

For the month, you won't pay more than your daily budget times the average number of days in a month. Some days you might spend less than your daily budget, and on others you might spend up to twice as much. [Learn more](#)

Accelerated: spending budget more quickly. This may cause your budget to run out early.

Figure 3.48: Budget for your campaign

[Figure 3.49](#) shows a screenshot of how you can choose a network for your video campaign:

Figure 3.50: Selecting language and location for your campaign

Select your bidding strategy

Now, you need to choose how you want to pay for your campaign by selecting a buying model such as a CPA or CPM for your campaign ([figure 3.51](#)):

The screenshot shows the 'Bidding' section of the Google Ads interface. A dropdown menu titled 'Select your bid strategy' is open, displaying four options: 'Maximum CPV', 'Maximum CPM', 'Viewable CPM', and 'Target CPA'. The 'Target CPA' option is highlighted with a blue bar. Below the dropdown, there is a 'Target CPA' label and a currency selector set to '£'. To the right, a text box explains that with Target CPA, you set the average amount you're willing to pay for a conversion, and Google will optimize bids to help get as many conversions as possible. A 'Learn more' link is provided at the bottom of this text box.

Figure 3.51: Selecting a bidding strategy

[Figure 3.52](#) shows how you can select an inventory type to show your ads on the content that is appropriate for your brand:

The screenshot shows the 'Content exclusions: define where your ads can show' section. Under the 'Inventory type' tab, there are three options: 'Expanded inventory', 'Standard inventory', and 'Limited inventory'. The 'Standard inventory' option is selected, indicated by a blue checkmark in a circle at the top right of its box. Each option includes a description and a list of excluded content types. 'Expanded inventory' aims to maximize available inventory by showing ads on some sensitive content, excluding extremely sensitive content like excessive profanity, graphic sexual content, and graphic violence. 'Standard inventory' shows ads on content appropriate for most brands, with the same exclusions as Expanded, plus repeated strong profanity, strong sexual content, and violence. 'Limited inventory' excludes most types of sensitive content to limit available inventory, with the same exclusions as Standard, plus moderate profanity and moderate sexually suggestive content. A 'COMPARE INVENTORY TYPES' button is located at the bottom. A disclaimer at the very bottom states that while content exclusions are done to the best of their ability, they cannot guarantee that all related content will be excluded, with a 'Learn more' link.

Figure 3.52: Select an inventory type

Select the people you want to reach

In this step, you need to define the demographic of your target audience. You have to create your own ad group for selecting the demographic attributes such

as age, gender, and household income of your potential customers ([figure 3.53](#)):

Create your ad group

Skip ad group and ad creation

Trends in digital advertising

The way we connect with our audience is about to undergo a sea change as a result of several innovative ideas in the digital sphere. Among them are the following:

Short, Do It Yourself (DIY) Videos

Short video postings have overtaken status updates and curated picture grids in a social media environment. Shortly after, other sites jumped on board, with Instagram debuting *Reels* and YouTube going all in on short-form video content. [Figure 3.60](#) shows an example of DIY videos:

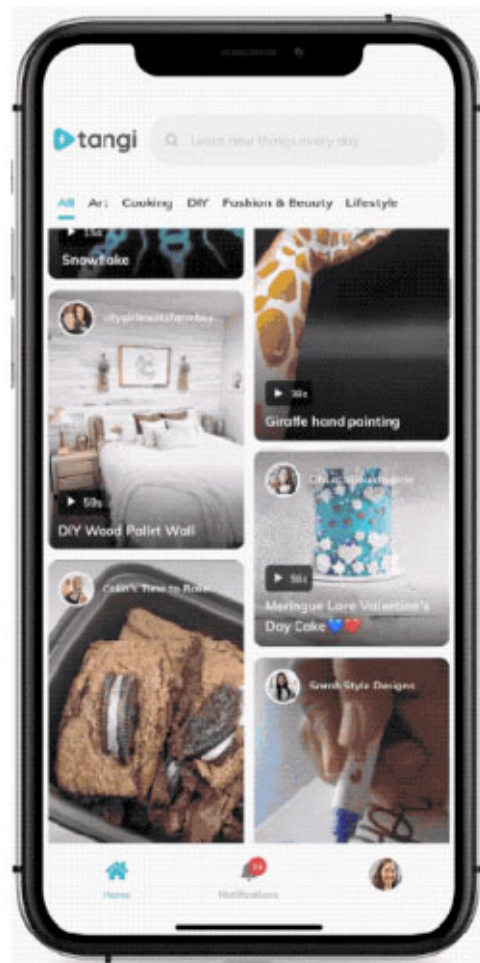

Figure 3.60: DIY videos example³⁸

Tell a real story

When it comes to brand marketing, storytelling is a must-have. In today's market, customers are fed up with hearing about how a product or service is superior to their competitors. They want to know whether you have lived up to their demands and expectations in terms of delivering on your commitments.

Focus on your audience

Lockdowns for more than a year have made social media users tired, worried, and even sad by the relentless assault of material they receive. As a result, some people have even decided to remove their profiles. Those who stay on social media endure a daily barrage of advertisements, campaigns, and news, and to suggest that it is saturated, will be an understatement. To retain your

audience, it is really necessary to know the need of your customer and what they really want and deliver the content in their language, which should be understood to them according to the area you are targeting.

Privacy, transparency, and trust-building

There is a lot of advertising out there, making people more distrustful of what they are seeing. Digital marketers should really be planning for stronger privacy rules that would impact how they may monitor the activity of their consumers in the year to come for this reason.

Personalization

In the years to come, the importance of personalization will grow exponentially. Instead of broad-reaching material that tries to appeal to the numerous people as possible, producing targeted advertising that speaks directly to your target market will provide better results.

Conclusion

In this chapter, we learned about how paid search advertising focused on the clear demand of the consumers. Ad placement is all about the set of ad units on the website which allow marketers to display their adverts in certain locations. Size, kind, and position of the ad are all considerations when it comes to ad placement.

Google uses the modified second-price auction method to rank the advertisements that display on the Google search engine results pages and calculate the cost advertisers must pay to be on top of the results page.

Caching the report's data allows you to see data created up to four hours earlier, hence, enhancing dashboard speed. Display marketing uses graphical displays to advertise—pictures, videos, and animations. It is possible to charge for the display using either CPC or CPM.

Analytical tools help in analyzing website performance, user's interaction data, and everything your users do can be tracked and monitored using analytical tools. Google analytical tools also help you find the finest engagement, information, and outreach options across social media and search engine results.

YouTube's main advantage is that it gives you the opportunity to efficiently market your business. Businesses may increase their visibility and reach by

using SEO-friendly headlines, tutorials, product reviews, Q&As, and video listicles.

In the upcoming chapter, you will learn about how a marketer should use the potential of social media marketing for building a brand and engaging new customers.

Key terms

- **Search engine marketing:** **Search Engine Optimization (SEO)** and search advertising are two parts of search engine marketing.
- **Ad Rank:** Position of ad on the sponsored search result page.
- **Animated ads:** Ads containing animation and music.
- **Google Display Network (GDN):** Collection of more than 2 million websites and google owned properties for the display of your ad.
- **Click fraud:** It is an illegal practice of increasing clicks on an advertisement with the help of a software program (bot) or human.
- **Programmable digital marketing:** The practice of using an automated bidding system to acquire and sell ad inventory in real-time.
- **Contextual advertising:** A targeted advertising which follows an automated process of matching an advertisement content with relevant digital content.
- **YouTube marketing:** Promoting a product on YouTube.

Questions

1. What is Search Engine Advertising? How does it work?
2. What are the benefits of search ads?
3. How can search engines improve advertising?
4. What Is Ad Rank?
5. What are the analytical tools used in Search Engine Advertising?
6. How is YouTube marketing beneficial in search engine advertising? Explain.
7. Write future trends in digital advertising.

Class exercise

1. Create a digital market ad campaign for promoting an offline clothing store using Google AdWords.
2. Identify a buying model which should be followed by the marketer for the ad campaign of a musical event.
3. Create a YouTube channel for your organization and identify methods for increasing the number of subscribers.

CHAPTER 4

Social Media Marketing

Social media marketing (SMM) is a subset of digital marketing that makes use of various social media platforms. Social media marketing is now widely used across a wide range of business sectors due to its broad applicability and wide acceptance.

There has never been a better method for individuals to stay connected than via social media networks. Regardless of the size of your company, you can use social media marketing to connect with your customers and users in a new manner.

This chapter introduces you to a form of internet marketing, i.e., social media marketing. SMM makes use of social media platforms such as *Facebook*, *YouTube*, and *Twitter* for building a brand and increasing sales and traffic to your website.

Structure

In this chapter, we will learn about the following topics:

- Social media strategies cycle
- Influencer marketing
- Social media platforms
- Social media marketing characteristics
- Building a successful social media marketing strategy

Objectives

The reader of this chapter will be able to develop an understanding of the basics of social media marketing. The reader will have an idea about influencer marketing and the various tools marketer can use for identifying influencers. After reading this chapter, the reader will be able to develop a successful social media marketing strategy.

Social media strategies cycle

Within 18 years, from 2004 (when *MySpace* became the first social media site to reach one million users) to 2022, the dramatic growth of interactive digital channels took social media to levels that challenge even the reach of television and radio.¹ By Q⁴ of 2022, there were 4.7 billion social media users globally—over 60% of the world's population—an increase of over 10% in one year alone.^{2,3}

Figure 4.1: Social media marketing⁴

The use of social media is increasing day by day, and marketers should use different social media platforms for developing a perfect marketing strategy to accomplish their business goals.

Following a six-step procedure, the social media planning cycle may help you design your SMM strategy. Setting, adjusting, and modifying objectives and the activities that go along with them may be accomplished by working your way through these six processes.

Listen

First and foremost, you must pay attention to what your clients have to say about the business. By listening to your customers, you can develop social media objectives that are attainable for your firm.

Listening also means keeping an eye on what others are saying about your rivals, the industry, and the general tone of the community. Keeping an eye on each of the major social media sites may be beneficial, as you will discover that they all provide distinct outcomes. Please refer to the following figure:

Figure 4.2: Social media strategies cycle⁵

Goals and objectives

Setting objectives requires a thorough understanding of your intended audience. For example, this process comprises identifying your target audience's geography, preferences, requirements, and habits.

SWOT analysis may also help you identify the organization's strengths as well as weaknesses, as well as opportunities, and also threats in the present environment. Set your objectives based on the information you have gathered.

Develop plan

A strategy is created for each individual situation. The facts you have at your disposal about your unique aim will guide each method you use. Think of your social media strategy as a blueprint or a road map at the beginning of the process.

The demands of your customers and your objectives must be taken into account while developing your strategy. After that, you need to figure out how to make them interact with your company. Consider the brand's personality, the

information you will be distributing, and also the platforms you are considering using while deciding on your strategy.

Develop content

The next step is to work on the ideas you jotted down in your timeline. You may use this timeliness to get an idea of the sequence in which you should begin creating your content. Understanding your target demographic as well as the brand is critical here. Many of your comments on social media might sound like your brand. You should also be really creative in this.

Use the keywords you want to rank for in your content. With a thorough keyword research report and appropriate categories, you must be able to come up with some amazing ideas for the relevant content that resonates with your target audience.

Engage

You are now ready to share your advertisement on social media, armed with clear goals, a well-defined timeframe, quality content, and the appropriate social media platforms. Participate in the discussion and voice your opinion. Make sure you have the tools you need to react to criticism and also keep the dialogue continuing.

Measures

Any company's marketing plan would be incomplete without the capacity to track the results of its various promotional efforts. Although it is more difficult to quantify the effectiveness of social media marketing than other forms of internet promotion, after defining goals and objectives, you now have a good start in determining how to measure success.

You may want to take a look at the content consumption if your success metrics call for it. Who are the people who are interested in what you have to say? What is their place of origin? You may also check how much or how little is being provided and the number of visitors engaging with your material. Here are a few things to consider while doing your measurements.

- Voice-sharing
- Engagement

- Influence
- Awareness
- Popularity

Influencer marketing

With over 80% of consumers reporting that social media—especially influencer content—significantly impacts buying decisions, marketers across industries are driving the evolution of **social media marketing (SMM)** from a stand-alone tool to a multipronged source of marketing intelligence on an increasingly important—and growing—audience.⁶

Brands need to know exactly what influencer marketing is if they are going to use it effectively. To put it simply, influencer marketing involves the practice of using social media influencers to spread the word about certain products, services, or campaigns. The goal here is to collaborate with an influencer who is now aligned with the brand and whose audience is likely to connect and also be interested in the product or offer, and also who is willing to do so. A partnership with the influencer is a great way to increase exposure for your company since their recommendations are widely respected by their followers. Influencer marketing may be a great addition to the social media strategy since it enables you to connect with a specific, interested audience and improve your brand's visibility. Here are seven reasons why influencer marketing should really be a component of your overall marketing plan:

Figure 4.3: Influencer marketing⁷

There are a number of ways influencer marketing might benefit your brand's visibility:

- Using influencers is a great way to reach your goal audience
- Influencer partnerships boost your credibility and trustworthiness
- The content strategy can be revitalized with the help of influencer marketing
- Influencers can help get more people to engage with the content
- Influencers may help you improve the search engine rankings
- Conversions could be boosted by working with influencers

Influencer marketing tools

Identifying the right campaign partners for the company may be as simple as using the following four tools:

- **Followerwonk**

Followerwonk is a tool that can be used to find influencers on Twitter. This can help in identifying potential marketing partners. Followerwonk makes it convenient to compare *Twitter* accounts and can classify followers on the basis of geographical location and personal information.

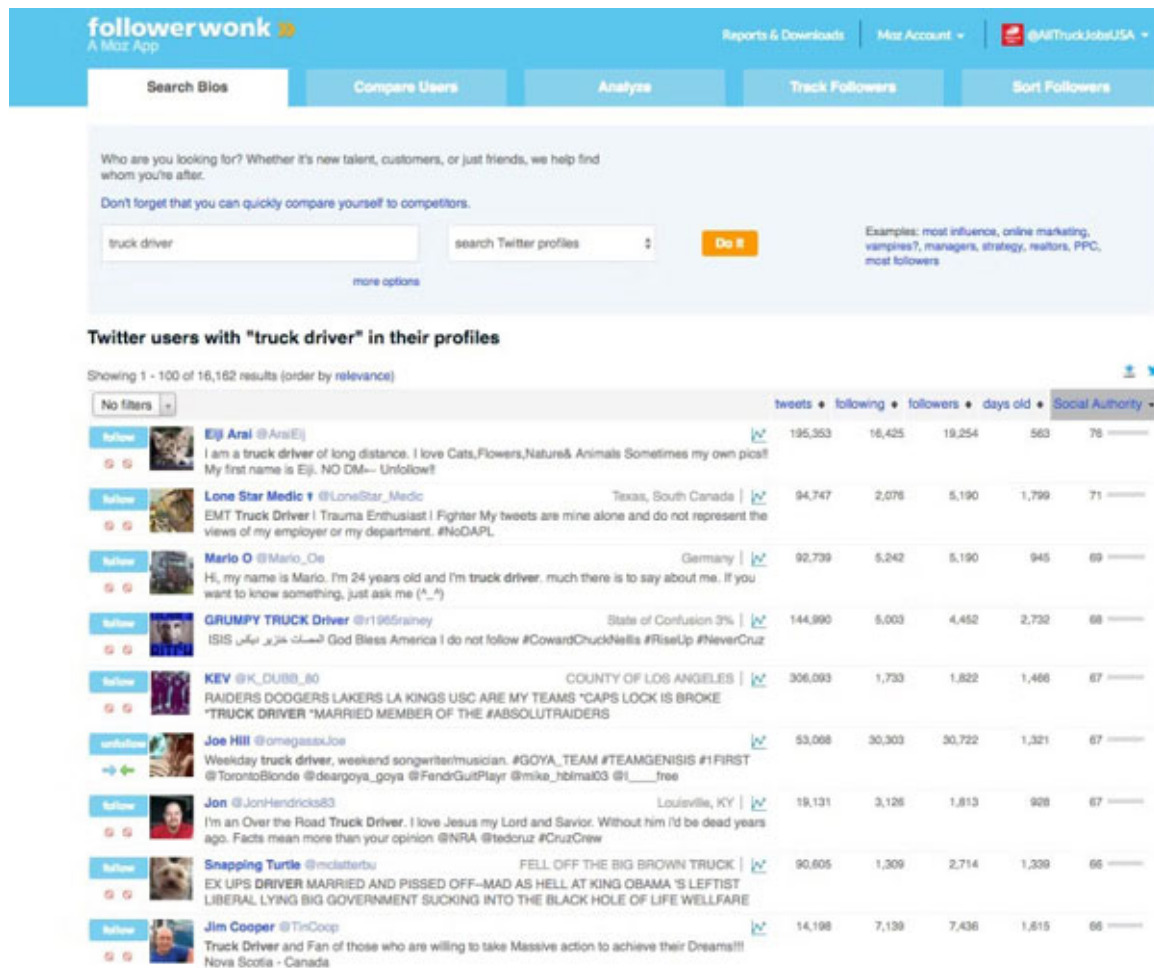

Figure 4.4: Followerwonk dashboard⁸

You may find new influencers, examine the authority rankings and look at different types of followers using Follower wonk.

You may even look at popular accounts and see how well they are doing.

- **BuzzSumo**

BuzzSumo is an excellent tool for identifying who and what is popular on social media platforms. This tool helps in analyzing the content shared by business competitors. BuzzSumo helps in finding the potential influencers best suited for your business needs.

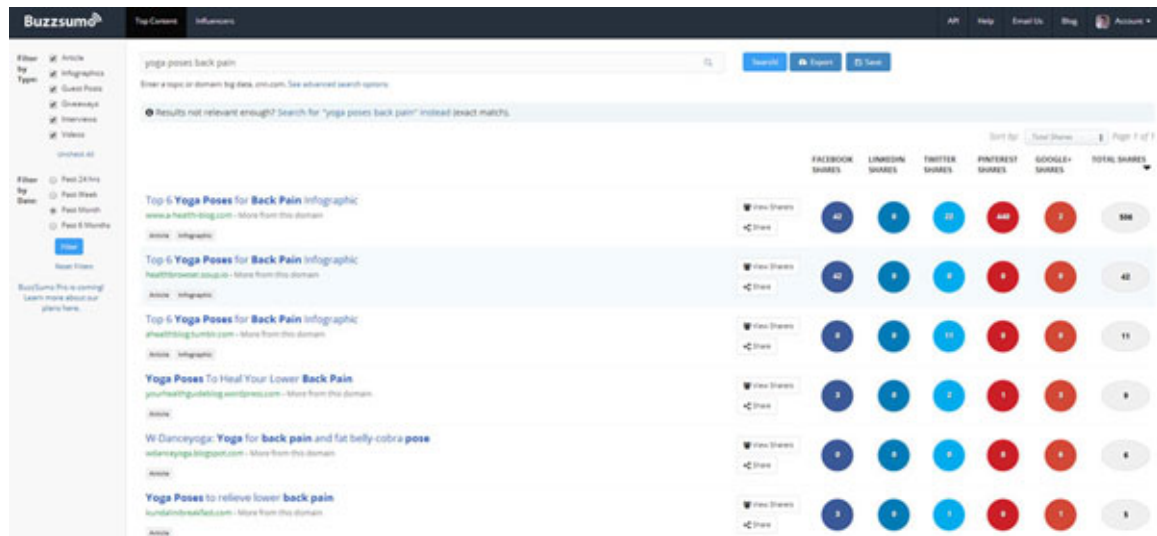

Figure 4.5: BuzzSumo dashboard ²

It is a paid service, but it is worth every penny! You may search *Twitter*, *YouTube*, or *Google* for the influencers in your business using the “*influencers*” feature.

- **Alexa’s audience overlap tool**

It is a terrific way to see which companies share your target market. Within the digital marketing sector, *Alexa* is regarded as among the most crucial tools. Improve your SEO and PPC strategy with the help of a wonderful set of tools that can be used by advertisers, bloggers, marketers, and also Webmasters to find new ways to increase traffic. Additionally, *Alexa* aids in the success of businesses marketing campaigns. ¹⁰

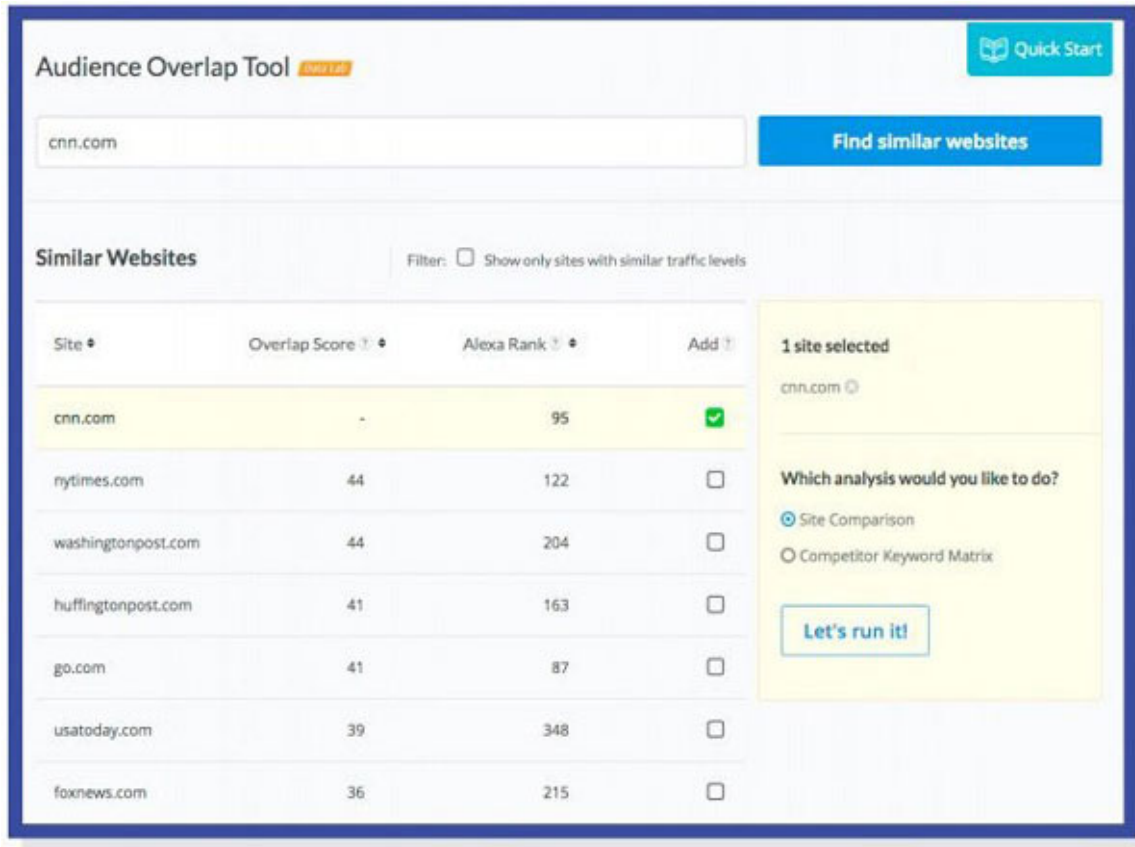

Figure 4.6: Audience overlap tool dashboard

Benefits

- Using *Alexa* to uncover and correct SEO problems and generate new content ideas is a terrific way to improve your website's overall performance.
- Board-friendly presentations may be created that show how well a company compares to its rivals, highlight strengths and flaws, point out new possibilities, and point out potential dangers.
- The ability to investigate the power, popularity, and impact of possible partnerships plus investment prospects and trending topics in the market.
- All marketers, Webmasters, corporations, and also bloggers may use *Certified Alexa Rank* to demonstrate and measure the popularity and performance of their website throughout time.
- According to *Alexa*, the popularity and rating of any website worldwide and in every nation may be estimated using this program.
- **Keyhole**

Simply enter a term in a search bar; the keyhole will provide a list of the most influential people based on that phrase.

You can find out just how many followers every influencer has, how frequently they post and how much interaction they get from followers by using the data provided.

KEYHOLE

Figure 4.7: Keyhole Dashboard¹²

- **Upfluence**

Upfluence is a tool that acts as an influencer search engine. It offers a huge database of more than 3 million profiles. This platform makes use of AI indexes for updating these influencer profiles in real-time. *Upfluence* can help in searching for influencers using a wide variety of keywords.

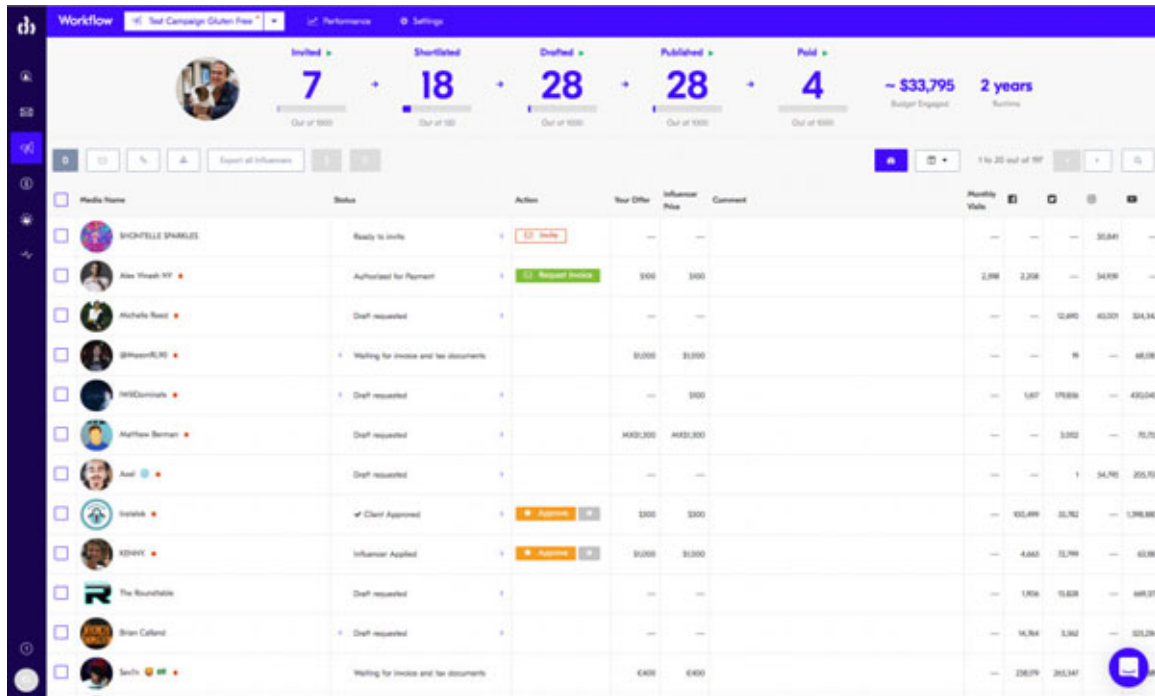

Figure 4.8: Upfluence dashboard¹³

Upfluence can search a social media platform on the basis of a number of criteria such as the number of followers, location, and so on.

Upfluence offers a free *Chrome* plugin that can act as a “do it yourself” tool for influencer marketing. This plugin is compatible with all social media platforms such as *Facebook*, *YouTube*, and *Instagram*. Marketers can make use of this plugin for analyzing profiles of influencers on all social media platforms.

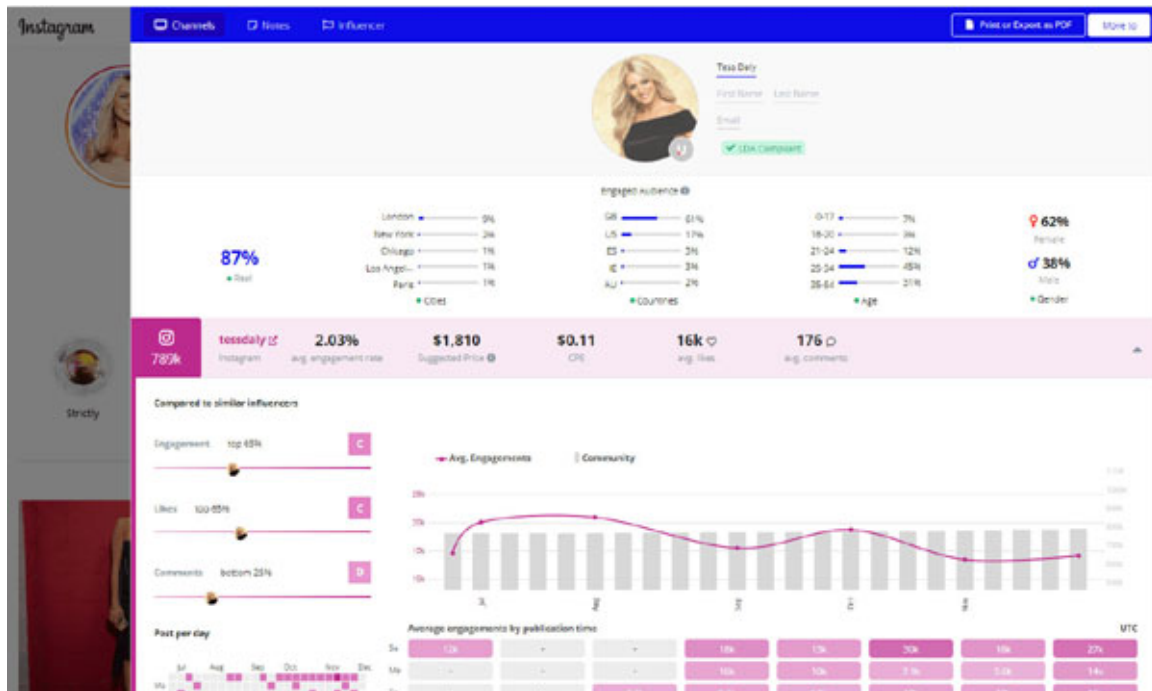

Figure 4.9: Upfluence Chrome plugin¹⁴

Social media platforms

Attracting and retaining consumers is the top most priority of any organization. You may use social media networks to sell and advertise your products and services more effectively. They open up new avenues for businesses to connect with their clients and build their brands. The best way to create a long-term connection with consumers is to interact with them.

Social media marketing continues to manifest its importance in Meta's advertising data. The company's latest numbers reveal that more than 560 million *Facebook* users now see ads in Marketplace each month, and 187 million Instagram users see ads in Instagram's Shop tab. WhatsApp tops the rankings of the world's "favorite" social media platforms, with 15.7% of working-age internet users choosing the messenger app as their favorite social platform. Instagram has overtaken Facebook to claim second place in the worldwide rankings, with 14.8% of global internet users identifying Instagram as their favorite platform, compared with 14.5% for Facebook¹⁵.

Social media platforms may be used by anybody with an internet connection. With smartphones, access to social media sites has become a breeze for most individuals. A company may broadcast its brand or advertising on social media networks as much or as little as they choose¹⁶. Marketers may choose one or

more of the social media platforms mentioned as follows as per their goals and objectives. Please refer to the following figure:

SOCIAL MEDIA MARKETING PLATFORMS			
	PEOPLE	CONTENT	STRATEGIES
	• 25-34 • Boomers	• Photos & links • Information • Live video	• Local mkting • Advertising • Relationships
	• 18-25 • 26-35	• How-tos • Webinars • Explainers	• Organic • SEO • Advertising
	• 18-24, 25-34 • Millennials	• Inspiration & adventure • Questions/polls	• Ecommerce • Organic • Influencer
	• 25-34, 35-49 • Educated/ wealthy	• News • Discussion • Humor	• Customer service • Ads for males
	• 46-55 • Professionals	• Long-form content • Core values	• B2B • Organic • International
	• 10-19 • Female (60%)	• Entertainment • Humor • Challenges	• Influencer marketing • Series content
	• 13-17, 25-34 • Teens	• Silly • Feel-good • Trends	• Video ads • Location-based mkting • App mkting

Figure 4.10: Social media marketing platforms¹⁷

The following are a few of the most popular social networking sites:

- **Facebook**

2.5 billion¹⁸ people visit Facebook each month, making it the most popular social networking platform in the world. Getting started over

Facebook is simple because practically all the content forms function well on Facebook, including text, photos, and video material. The algorithm, on the other hand, favors material that generates significant dialogue and engagement amongst users.

Crippling Memes added a new photo

Figure 4.11: Facebook¹⁹

- **YouTube**

Every day, more than a billion hours of video are seen on YouTube. Because of its parent company's dominance in the search engine market, YouTube is frequently referred to as the second-largest search engine.

YouTube is a free tool that kids may use to find new interests and hobbies. Music videos, comedies, tutorials, recipes, and other content that are popular on YouTube among today's youth. The video-sharing site is also used by teens to follow favorite video bloggers, subscribe to other YouTubers, and also celebrities they are happy to engage with. You can create a personal YouTube channel for your videos and upload them there. You may post videos on your YouTube account, Comment on other videos from there, and also share other videos. YouTube channels may be subscribed/followed by the people themselves. You can organize your video library using playlists.

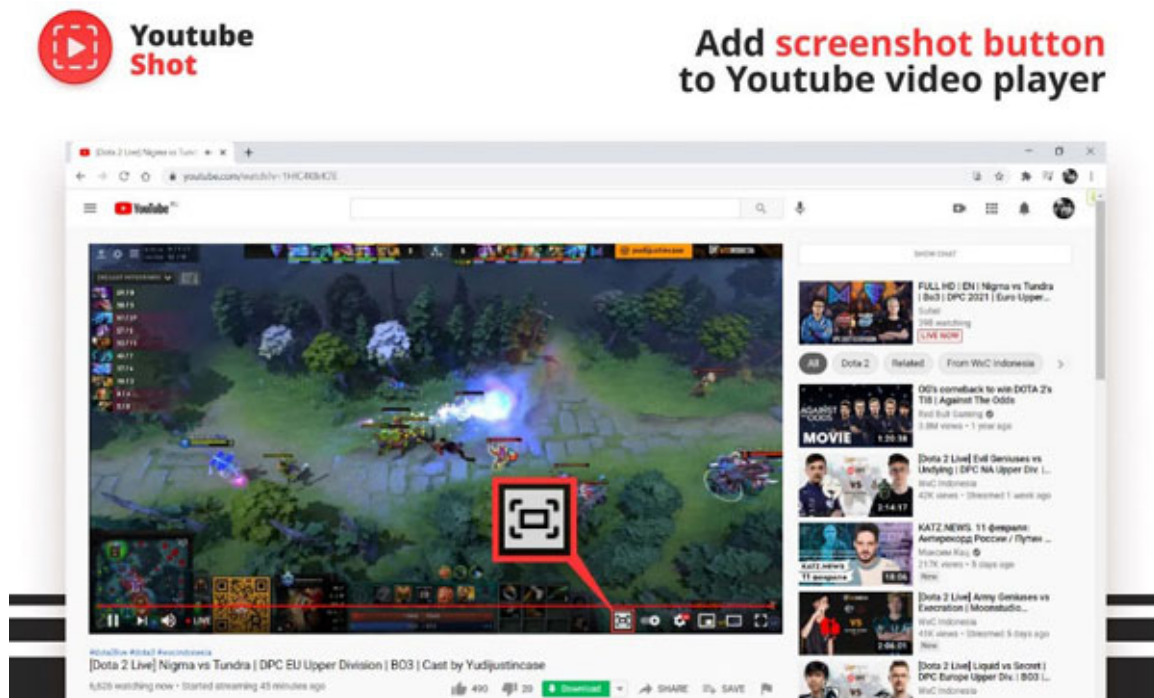

Figure 4.12: YouTube²⁰

- **WhatsApp**

People in more than 180 nations use WhatsApp to communicate. Originally, WhatsApp was mostly used for text messaging among friends

and loved ones. People began using WhatsApp to communicate with companies over time.

Customer service and product updates are both made possible with WhatsApp's business platform. Small and medium-sized organizations may use the WhatsApp Business app, whereas large corporations can make use of the API provided by *WhatsApp Business*. Please refer to the following figure:

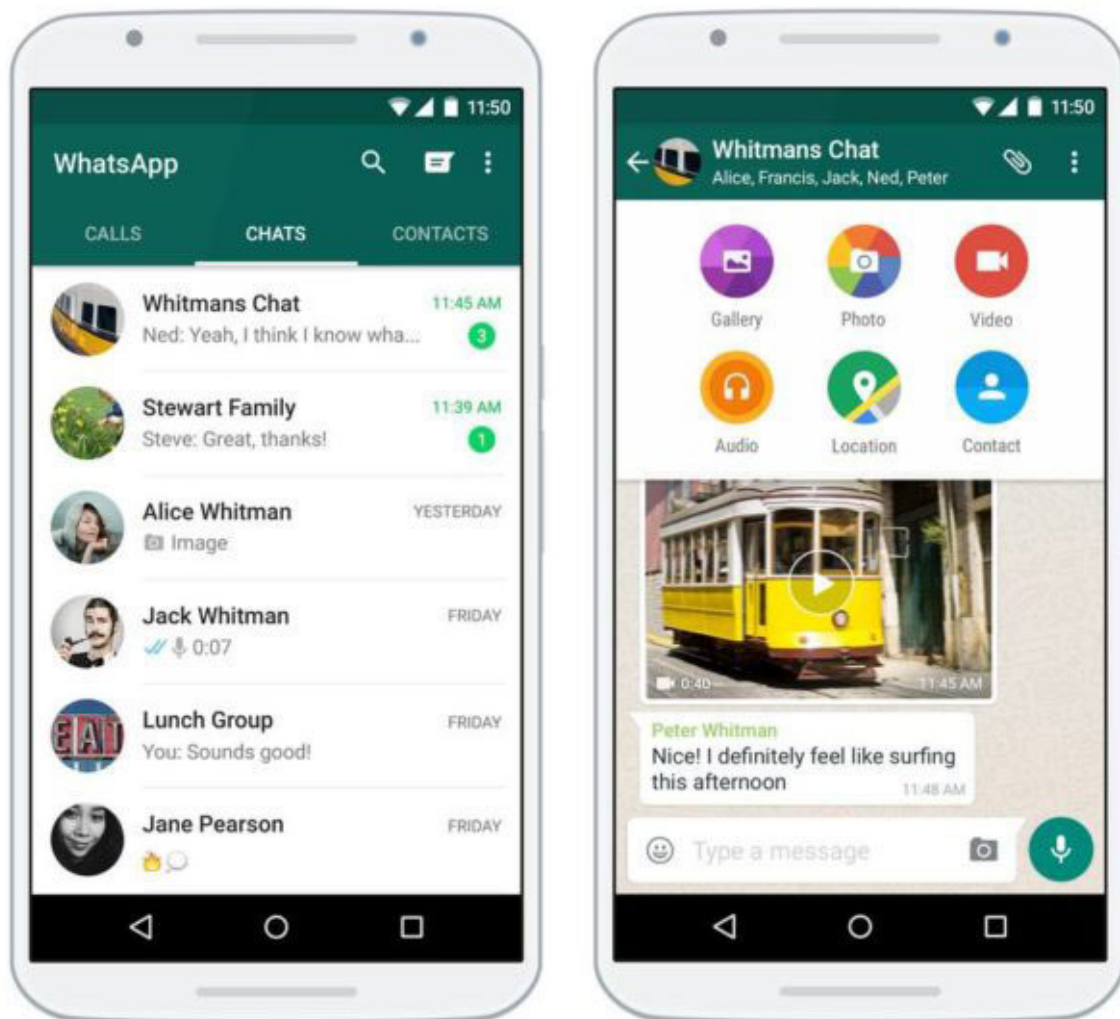

Figure 4.13: WhatsApp²¹

- **Instagram**

Instagram's visual nature makes it ideal for promoting your goods and services via images and videos. A variety of material may be shared on the app, including images and video clips and short-form films like IGTV for the longer-form content. Instagram's ad reach has jumped by 21%

(more than 257 million users) over the past year. Ads on Instagram reach almost 1.5 billion users each month, with more than 1 billion users reached through Instagram Stories alone.²²

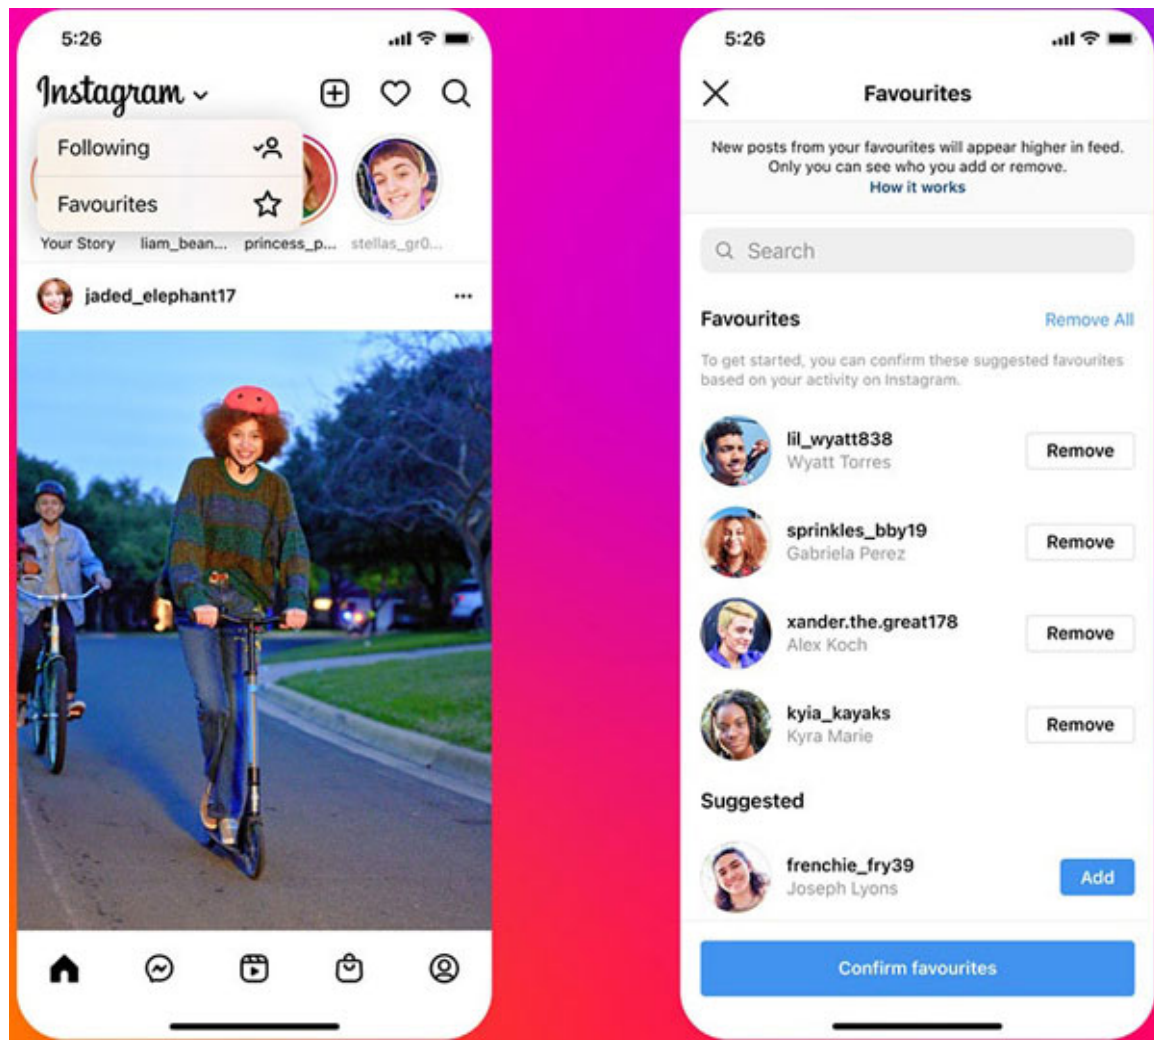

Figure 4.14: Instagram²³

The Instagram business profile gives your company access to detailed information about your account and its posts and the third-party solutions for scheduling Instagram updates.

- **Telegram**

There are no restrictions on the amount of material that may be shared on Telegram.

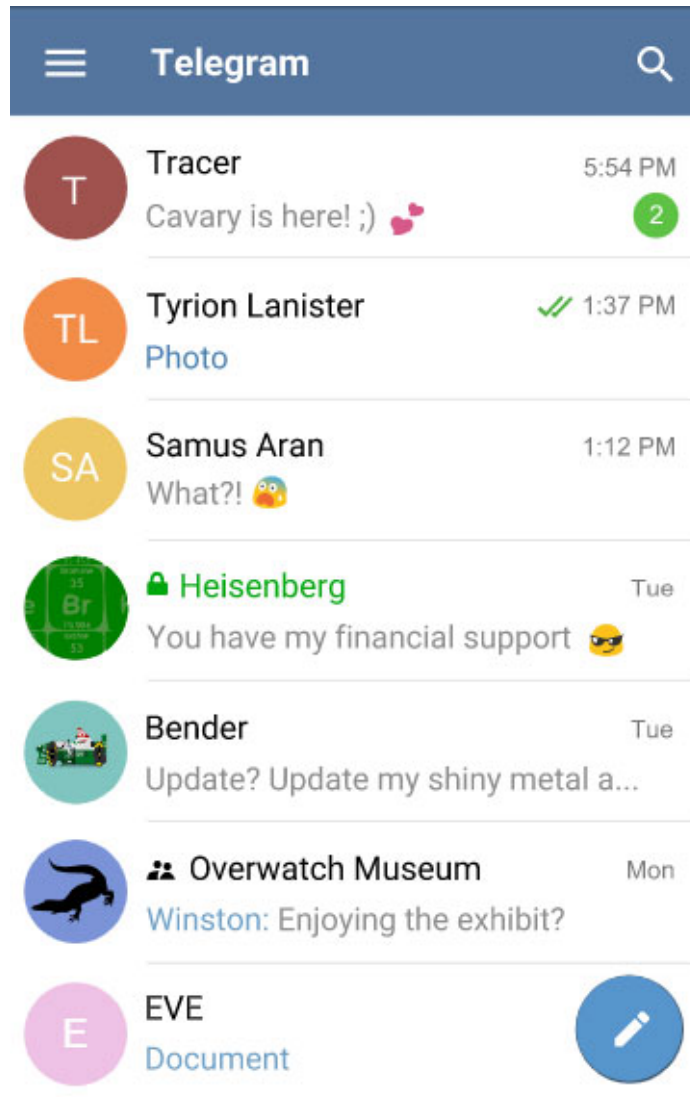

Figure 4.15: Telegram [24](#)

End-to-end encryption for all operations, including conversations, groups, and shared media, is Telegram's distinguishing characteristic.

- **Twitter**

Twitter is such a powerful social media platform that *Marketers* can use this platform for contacting their prospects, followers for creating a brands' personality, for seeking feedback, and for providing customer service. Please refer to the following figure:

Home

The Barista Bar  @baristabar

Love coffee? Tweet which drink is one of your all time favorites.

[Tweet #TeamCappuccino](#)

[Tweet #TeamLatte](#)

 Promoted

*Figure 4.16: Twitter ad*²⁵

This platform helps marketers to remain in touch with potential customers from around the world. The goal of Twitter marketing is to increase brand awareness, boost conversions, and ultimately increase sales.

Penetration and characteristics

Social media marketing has revolutionized the marketing space.

- **Price adjustment**

When it comes to market penetration, the most common method is to adjust a price. A common instance of the price adjustment strategy is reducing the price of the product or service in order to boost sales.

- **Augmented promotion**

It is possible to get spectacular outcomes by increasing the amount of advertising for the product. This sort of marketing incorporates extra customer service and advantages that the product may give besides the primary and real product, which is being sold.

It might be in the shape of hi-tech services such as online computer repair services, movie on-demand, and so on. Thinking of it as supplementary advantages that are offered and conveyed to clients as distinct from the primary benefits.

Suppose you wish to get a broadband connection; the fundamental advantage is to have access to the internet. Now, new incentives could be added to it—each month, free access to OTT Platforms, premium customer support, and so on.

The term augmented implies made bigger in size or worth. So, by establishing more perks, enhanced marketing enhances the possibility of a sale.

- **Distribution channels**

In terms of market penetration, the distribution channels are among the most effective. By concentrating on a single distribution channel, this technique often opens up additional distribution channels. For example: If you are an e-commerce firm that manufactures and distributes garments directly to clients, you are using a direct distribution method.

- **Improving products**

It is true that if you want to keep your consumers, you will have to raise the bar on the quality of your products.

- **Upsurge usage**

Increased use of any product or service is a powerful strategy of market penetration. Market penetration will improve when more people utilize the product because of a successful marketing promotion effort that targets a certain geographic region.

- **Be unique and think differently**

As easy as it may seem, market penetration might still be a struggle if you view it that way. In order to succeed, you will have to come up with a strategy that is both original and very creative. For example, the TV advertisement for Hyppydent is one of the best ad in terms of creativity.

Figure 4.17: Unique Ad of Happydent [26](#)

Social media marketing characteristics

Social media marketing was the only way for the brands to communicate with their customers during the pandemic. The report also highlights the role of social media advertising in the marketing mix, with more than 1 in 4 internet users aged 16–64 (27.6%) saying that they discover new brands, products, and services via social media ads^{[27](#)}.

The social media marketing characteristics are as follows:

- **Participation**

Social media enables everyone to share their thoughts and ideas. The conveyance of ideas via online discourse is part of social media. Its goal is to serve as a link between businesses and the people who buy their products. People are embracing this participatory method in which they feel like they have a voice and an effect.

- **Openness**

Everything you do and say is on display for everyone to see. People are ready to point out any inconsistencies, errors, or missteps. Negativity may damage a brand's online image; therefore, brands must be open, honest, and genuine.

- **Relationship building**

Using social media is a two-way street, involving engagement from both the brand and the consumer. It is essential for companies to establish meaningful relationships with the people they want to reach. Real individuals engage in real-time dialogue using social media technologies. Businesses may benefit greatly from taking the time to create relationships with their customers.

- **Reliability**

To seem trustworthy, you must maintain a continuous internet presence. The most effective social media marketers aggressively use target social channels to become connected with new people and promote their products and services. They often communicate with their intended audience. Increase customer confidence by interacting with them on social media.

- **Customer service**

The needs of customers should be met. Connecting with your customers and showing them how your products or services improve their lives is at the heart of social media marketing. Social media is not only for self-promotion; it is also about giving consumers something of value.

Building a successful social media marketing strategy

Social media marketing focuses on client involvement, revenue generation, customer experience improvement, and establishing the brand as the thought

leader. Please refer to the following figure:

Figure 4.18: Social media marketing strategy [28](#)

- **Customer engagement:** To keep your consumers engaged, you must actively listen to what they have to say about your product on social media and then reply in ways that demonstrate your appreciation for dialogue with potential and current clients.
- **Revenue generation:** It is possible that you are looking to generate revenue. In several circumstances, social media will generate leads, but not essentially direct sales. It is possible to think of social media as a public relations campaign that does not always lead to direct sales.
- **Improving the customer experience:** In order to enhance the client experience, assistance must be made available. You can swiftly react to customer service concerns and difficulties with your goods as well as services by keeping an eye on the social media comments. If you care about the client experience as well as the quality of your service, then this shows that you do.

Your business's position as just a thought leader may help you establish yourself as an expert in your field, allowing you to provide clients as well as prospects unique insights they will not find somewhere else.

In the world of social media, a social media plan is a document defining your social media objectives, methods, and key performance indicator.

You should include a list of most of the social media accounts, both current and future, along with particular objectives for each site on which you are involved. These objectives should be a part of your overall digital marketing plan. Please refer to the following figure:

Figure 4.19: Social media marketing goals [29](#)

Finally, a solid social media strategy should spell out the duties of each member of your team and the frequency with which you will report on those tasks.

Here are the steps for creating a strategy:

1. Consider your company's long-term goals when setting the social media marketing goals.
2. Take the time to learn everything you can about your target market.
3. Become familiar with your competitors' products and services.
4. A social media audit is needed.
5. Create user accounts and enhance existing ones.
6. Find inspiration.
7. Set up a content schedule for your social media accounts.
8. Produce enticing material.
9. Keep tabs on results and make any adjustments to your social media approach.

Conclusion

Social media marketing is a subset of digital marketing that makes use of various social media platforms. A six-step social media planning cycle may help you design your SMM strategy. Regardless of the size of your company, you can use social media marketing to connect with your customers and users.

Influencer marketing is a great addition to the social media strategy since it enables you to connect with a specific, interested audience and improve your brand's visibility.

You may use social media networks to sell and advertise your products and services more effectively. They open up new avenues for businesses to connect with clients and build their brands. It is also the best way to create a long-term connection with consumers is to interact with them.

A social media plan is the document defining your social media objectives, methods, and key performance indicator. It should include a list of most of the social media accounts, both current and future, along with particular objectives for each site on which you are involved. These objectives should be part of your overall digital marketing plan.

In the upcoming chapter, we will learn about Facebook marketing. The reader will be able to create an advertising campaign for Facebook.

Key terms

- **Influencer marketing:** Social media marketing that involves the promotion of a product or service by influencers (e.g., celebrity endorsement)
- **KPI:** Key Performance Indicators
- **Social media marketing strategy:** Summary of social media marketing plan
- **Social media strategy cycle:** Includes six steps—listen, set goals, strategize, implement, measure, and improve

Questions

1. What is social media marketing?
2. How does social media benefit a business?

3. Describe one strategy that will help you succeed as a social media marketer.
4. How should a company measure social media marketing success?
5. Describe the role of Influencer marketing in social media marketing?
6. What are the characteristics of social media platform?
7. Explain step by step strategy for successful social media marketing?

Class exercise

- Think of a traditional media ad of a brand of your choice and design content for social media marketing for all social media platforms.
- Explore and use any of the four tools of influencer marketing.

CHAPTER 5

Facebook Marketing

Introduction

Facebook marketing is a branch of digital marketing that is used by marketers for the promotion of a brand and maintaining its social presence. Brands may sell their goods and services on Facebook using a range of highly targeted paid adverts and organic postings, which enable them to reach an enormous audience. Facebook has 1.56 billion daily active users worldwide, which is nearly equal to 20% of the world's population.¹ Over the last years, Facebook has gone from being the internet's most popular social network to becoming one of the internet's most popular markets. With such a huge number of users, Facebook has a very high social influence. This impact can be used by the marketers for building brands' reputations, developing better customer relations and increasing brand awareness.

You may guide your viewers to the website with the help of this tool. Additionally, these visitors are more likely to be high-quality leads than those that get to your site via organic means. Social networking is the preferred method of interacting with a company for many consumers. The days of making long-distance phone calls are over. Create a Facebook Messenger chatbot that responds to users' most frequently asked questions. According to some online marketers, social networking has an effect on search engine results ranks. Your information in the "*About*" section is assumed to be taken into consideration by robots. Social media activity also plays a big role. People who share, like, and comment on your content show Google that they are interested in what you have to say².

Structure

In this chapter, we will learn about the following topics:

- Introduction to Facebook marketing
- Adverts
- Creating a Facebook business manager account
- Facebook advertising campaign
- Facebook marketing tools

Objectives

After reading this chapter, the reader will be able to have a basic understanding of Facebook marketing. The reader will be able to have an insight into organic and paid methods of advertising on Facebook. The reader will also be able to create an advertisement campaign for promoting a brand and have an idea about different Facebook marketing tools.

Introduction to Facebook marketing

Globally, Facebook users generally spend about 60 minutes per day on the app³. As a marketer, you should take advantage of this platform by designing a Facebook page for your organization. A Facebook page is a social presence of a brand on this platform that acts as a gateway to market your products or services. The contents of the Facebook page can be used to increase brand awareness among the followers of your brand. These followers can click, like, share, and comment on the content received from the brand as a news feed. [*Figure 5.1*](#) illustrates the number of Facebook users all across the globe:

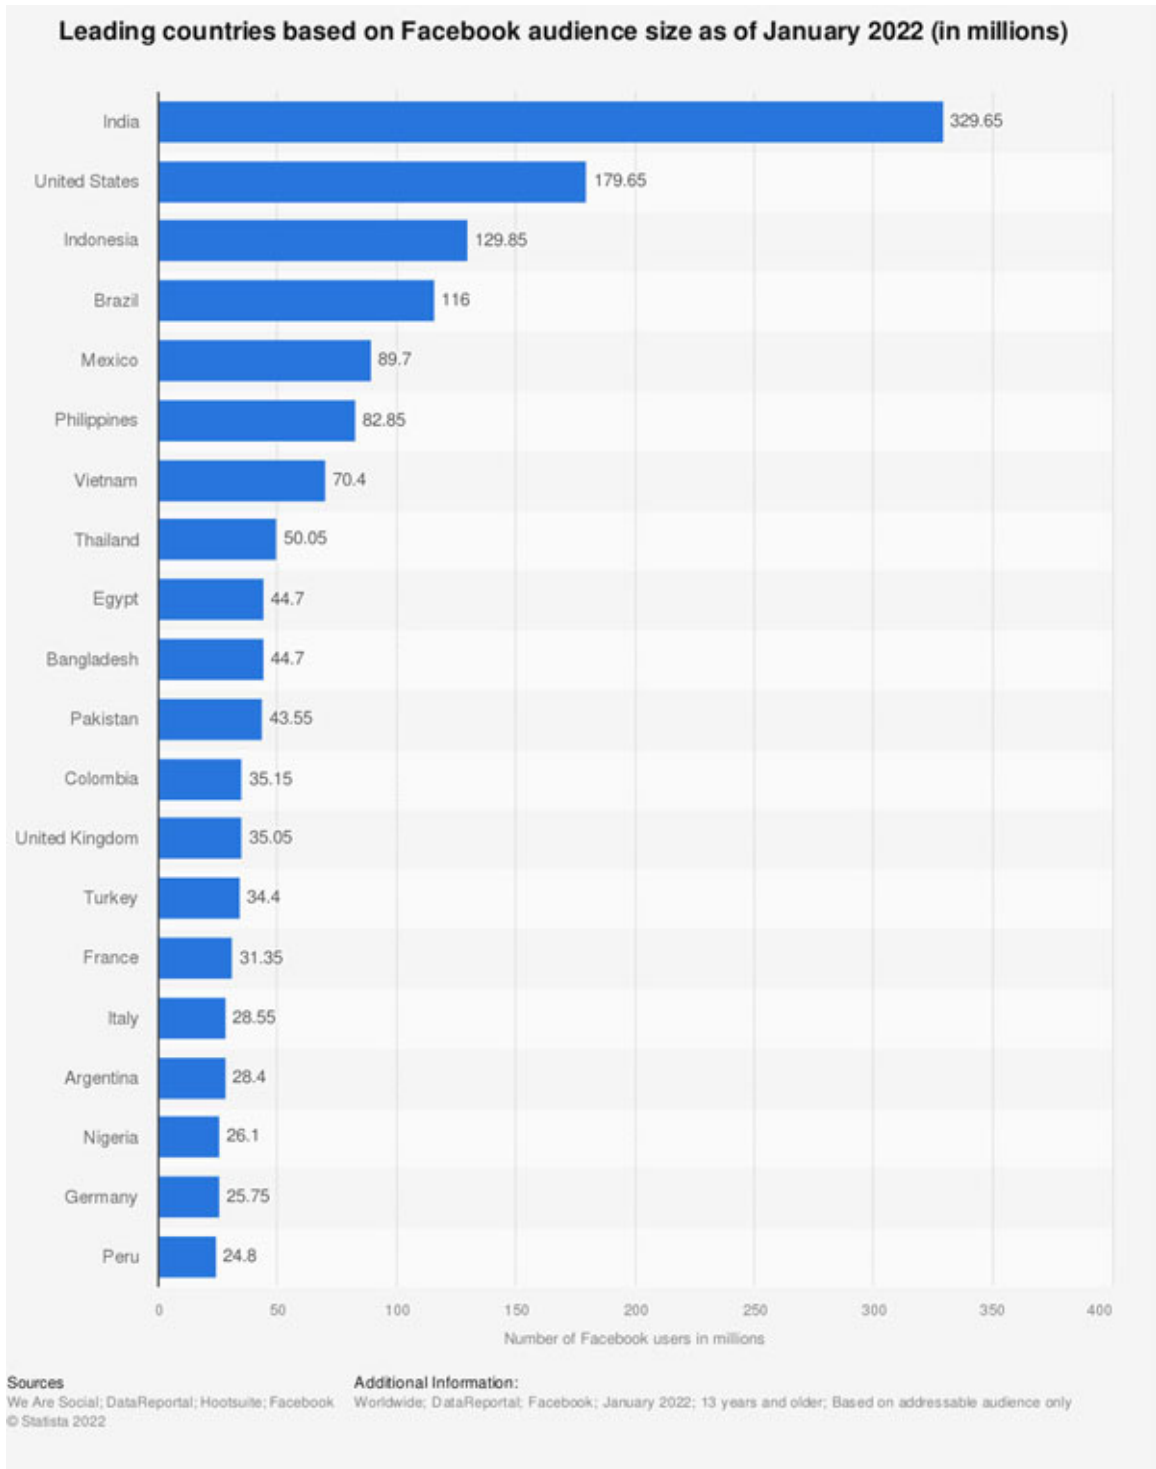

Figure 5.1: Number of Facebook users⁴

Organic marketing

Facebook has a very large number of users which is increasing with every passing day. It has the capability of penetrating very deep into the market and has the probability of finding potential customers in almost any type of business. You can refer to [figure 5.2](#) to graphically witness the growth of Facebook users in India:

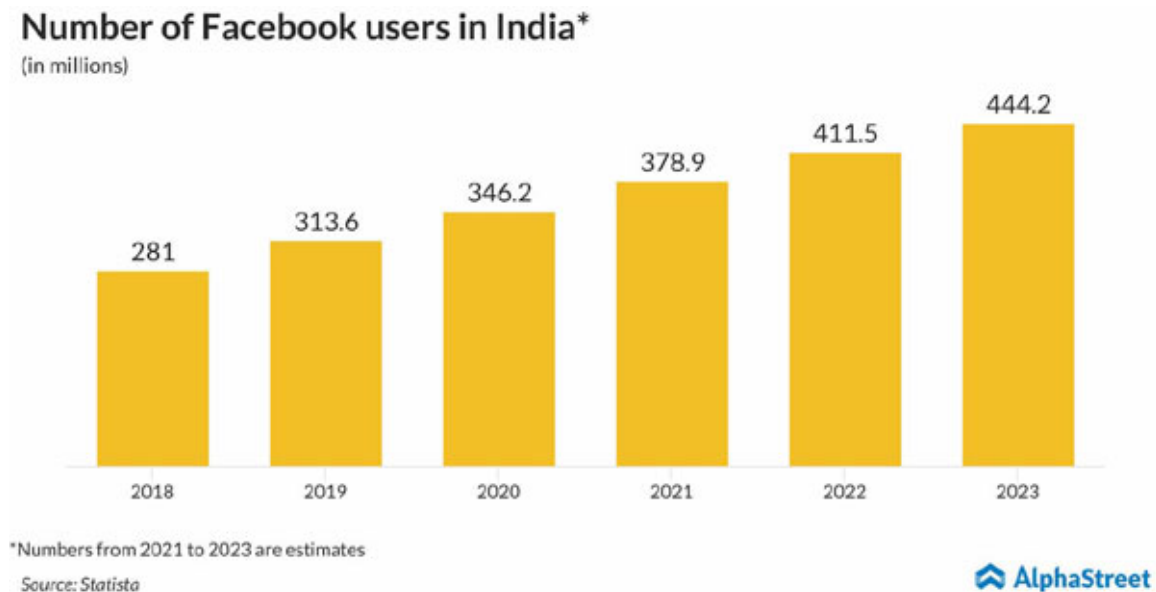

Figure 5.2: Increase in number of Facebook users [5](#)

Facebook filters the large volume of data generated in newsfeeds by applying a machine learning algorithm, the EdgeRank algorithm. This algorithm filters and prioritizes the contents and determines what a user will see in their newsfeed. EdgeRank algorithm also applies to sort the content to decide what should be shown to the user at the beginning of their newsfeed and what at last.

EdgeRank algorithm

All the activities on Facebook, such as like, comment, share, and so on, are known as the edge. The rank of the feed depends on the number of edges a particular post has. The more the number of edges, the higher the rank.

$$\text{EdgeRank} = \sum u e w e d e$$

EdgeRank algorithm calculates the rank on the basis of three factors:

Affinity score (u): This is calculated on the basis of how frequently a follower got engaged with the brand's Facebook page. For example, if you like, comment, or share the content posted on the brand's page more frequently, then you have a high-affinity score. It is basically how much you and the brand

you follow will interact with each other. A brand can get engaged with the customers by replying to the comments made by them on their Facebook page of the brand.

Edge Weight (w): Edge weight is a measure of importance assigned to each post. It depends on the audience's interaction with the brand's Facebook page. Sharing a post attracts more weight than a comment, like, or a click. Facebook updates the weight to a high or low value depending on whether the post of the brand is shared or commented on, or just liked by the follower.

Time Decay (d): Time decay is a measure of the newness of the post. The older the post, less is the importance. EdgeRank uses this factor for sorting the feed.

The content with higher EdgeRank is displayed in the feed. This machine learning algorithm displays the contents of the basis of the rank irrespective of the size and marketing budget of the organizations.

Apart from this algorithm, a marketer should concentrate on the quality of the content to be posted on the Facebook page of the brand. Quality content will attract more users; for example, videos and images will provoke the user to interact more with the post rather than just text. Facebook uses the 3E strategy for designing and developing good quality organic content to attract and engage more number of users.

The 3E strategy for organic content includes *Excite*, *Engage*, and *Educate*.

Excite: The first "E" of this strategy is Excite. With the increase in the number of users and posts on Facebook, your post should stand out from so many daily feeds. The contents should be such that the post is going to attract the user within a few initial seconds. For example, you can include some eye-catching phrases or videos to create excitement in the mind of the user. An example of this can be seen in [figure 5.3](#):

Figure 5.3: Excitement factor in organic content on Facebook

Engage: To engage more and more customers and to identify the target audience, the contents of the Facebook page should be such that the user is going to get engaged with the post instantaneously. For example, if you are interested in buying some particular product, then brands related to that product can target your profile.

Educate: The user on Facebook is not only for entertainment but also for relevant information about the product or service they are interested in. The marketer should educate the potential customer by enriching the contents of the brand's Facebook page. Refer to an example from the screenshot as shown in [*figure 5.4*](#):

Apple Fans Club · [Join](#)

AirPods Pro 2

to feature heart rate detection and USB-C

@theapplehub

Figure 5.4: Educate (providing information about AirPods Pro)

If a brand is not getting enough engagement with the potential customers by using this organic method of marketing on Facebook, they may use an inorganic method of Facebook advertising, i.e., paid advertisement by Facebook.

Paid marketing

The marketer may use Facebook as the paid advertising channel for the promotion of a brand. Facebook provides a number of options for paid ads, but all ads can be divided into three elements, as shown in [figure 5.5](#):

- **Campaign:** A sequence of ads sets for achieving one of the objectives of Facebook marketing, such as generating leads.
- **Ad Sets:** You may have a number of ad sets depending on how many types of audiences you are targeting.
- **Ads:** Every ad set may consist of a number of ads varying in color, image, and so on.

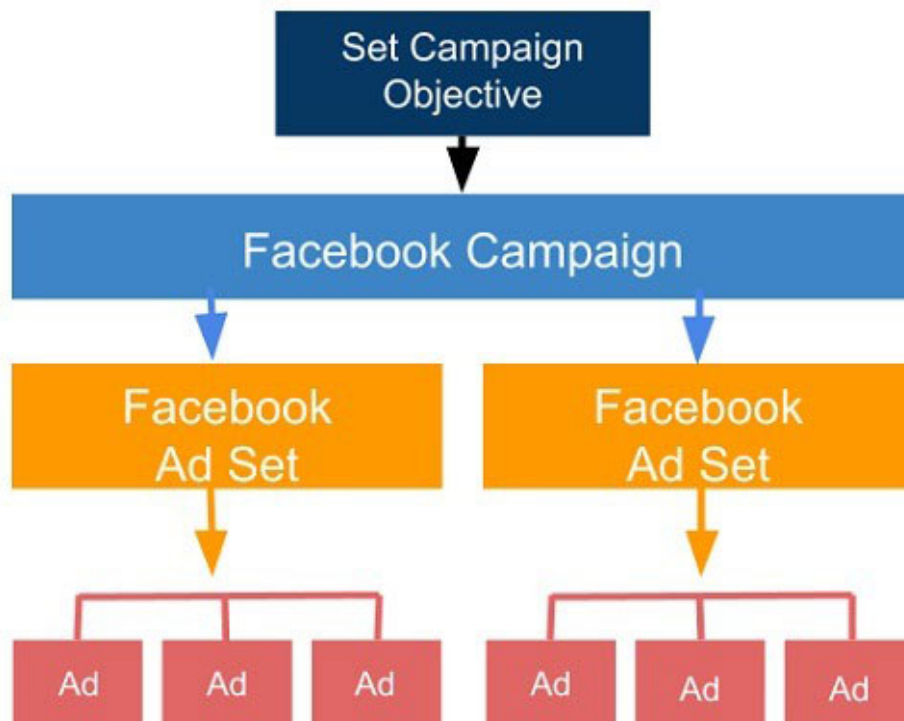

Figure 5.5: Elements of an ad campaign⁶

Adverts

A pay-per-click model is used for Facebook advertising, wherein you pay a network every time the user clicks on an ad, also referred as the cost-per-click.

Marketers can use Facebook advertising to improve the exposure of their advertisements, raise awareness of their brands and track key performance indicators and campaign objectives, all of which help them construct future campaigns that are even more effective. [Figure 5.6](#) refers to a different type of Facebook ads:

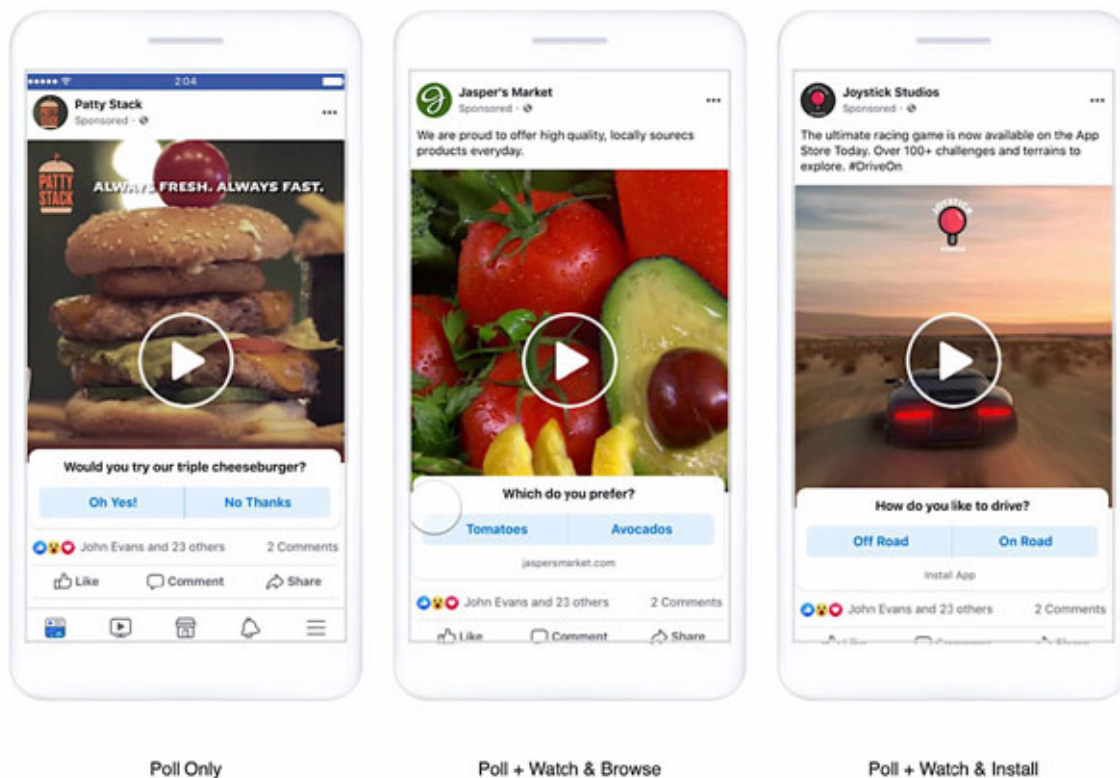

Figure 5.6: Different types of Facebook ads⁷

As Facebook's user base continues to grow and its audience targeting capabilities expand, it has become the social media advertising industry's undisputed leader.

- **Growing audience size:** According to Facebook's most recent statistics, 44% of its monthly active users are female, whereas 56% of them are male⁸. With the use of Facebook audience insights, marketers are able to narrow down the target group much more quickly.

- **Attention:** Social media sites like Facebook and Twitter have become popular hangouts. It is a great opportunity for marketers to target the correct audience at the right moment.
- **Targeting options:** It is possible for companies to target consumers based on a wide range of demographic and behavioral factors on Facebook.

B2B and B2C companies may benefit from Facebook advertising if they use it correctly to generate new leads and turn them into customers. You need to create a business manager account before creating an advertisement campaign on Facebook.

Creating Facebook business manager account

You should follow the following steps for creating a business manager account:

1. Navigate to <https://business.facebook.com/> and click “**Create Business**” (what used to be “**Create Account**”). You can refer to [figure 5.7](#) for a sample page for creating your business manager account.
2. In the pop-up screen, cautiously enter the correct business name because this name will show up when you roll out ads.
3. Next, enter the email address of the business to receive updates about your Facebook Business Manager.

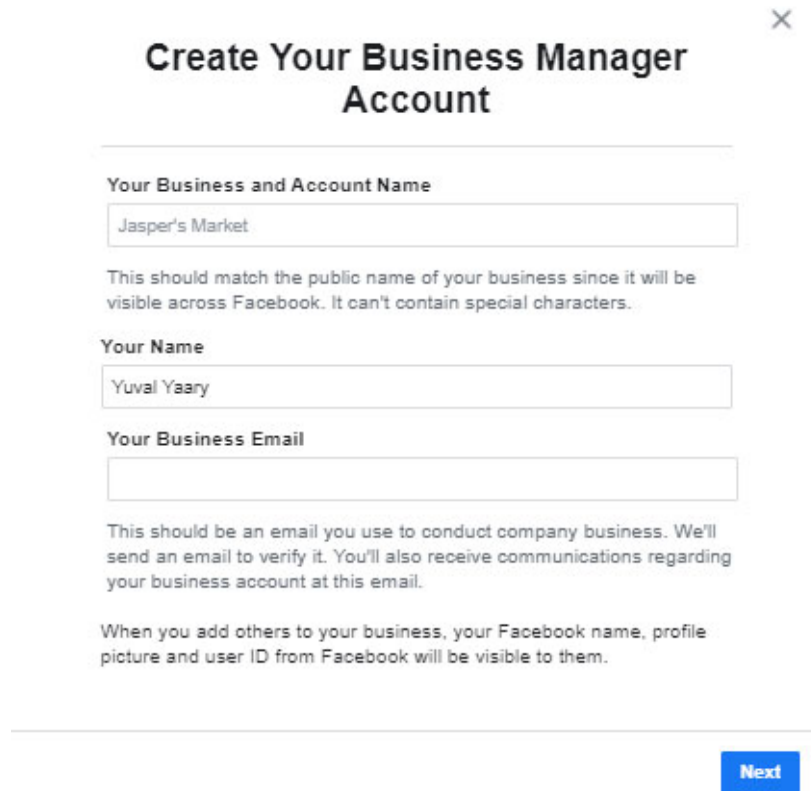

A screenshot of a web form titled "Create Your Business Manager Account" with a close button (X) in the top right corner. The form is divided into three sections: "Your Business and Account Name" with a text input field containing "Jasper's Market" and a note below stating "This should match the public name of your business since it will be visible across Facebook. It can't contain special characters."; "Your Name" with a text input field containing "Yuval Yaary"; and "Your Business Email" with an empty text input field and a note below stating "This should be an email you use to conduct company business. We'll send an email to verify it. You'll also receive communications regarding your business account at this email." At the bottom, there is a note: "When you add others to your business, your Facebook name, profile picture and user ID from Facebook will be visible to them." and a blue "Next" button.

Figure 5.7: Facebook business manager

After that, it is time to enter your business details, such as your address and website. Once you have done that, go to the email address you had earlier entered and confirm the email address to complete the initial setup. Now, if you want to start running ad campaigns on Facebook, you need to connect your

Facebook page to the Business Manager by following the steps given as follows:

1. Navigate to **Business Settings** on the left-hand side panel of the **Business Manager**.
2. Click **Ad Accounts** under the **Accounts** tab on the menu to the left.
3. Click the blue **Add** button to open the dropdown menu.
4. Select **Create a New Ad Account**. Alternatively, at this stage, you can choose to **Add an Ad Account** or **Request Access to an Ad Account** using the ad account ID, as long as no other Business Manager has ownership of the account. You can refer to [figure 5.8](#) for a sample window for adding an ad account:

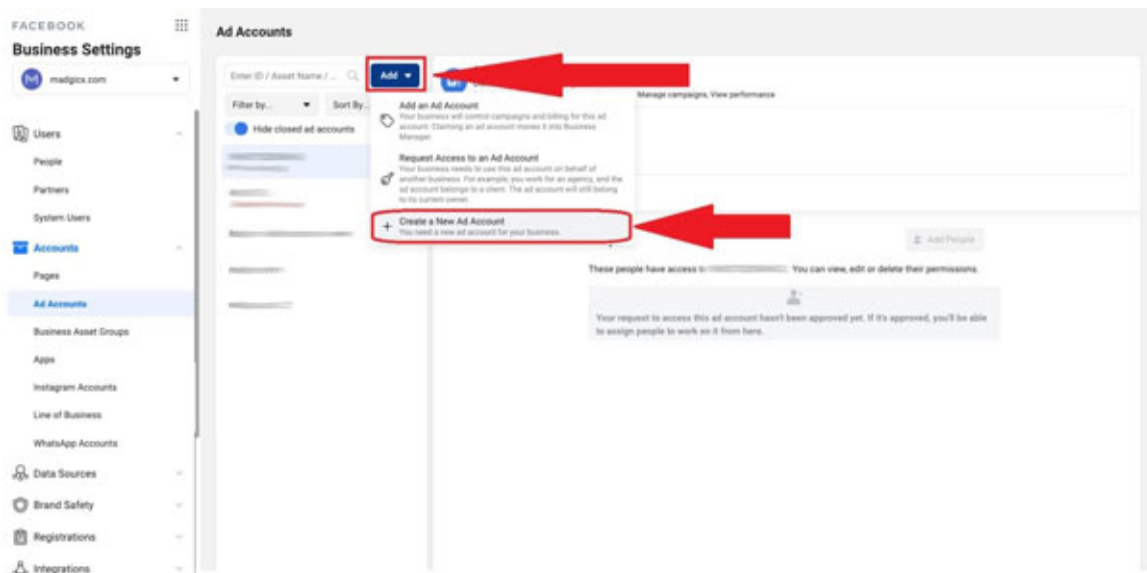

Figure 5.8: Creating an ad account

5. Name your new account, and select your time zone, currency, and payment method. Pay close attention when selecting your billing currency and time zone, as you will not be able to change them once you have created your ad account. If you change any of these two parameters, you will need to create a new account. [Figure 5.9](#) refers to a window for adding the details to your ad account:

Figure 5.10: Final step of creating an ad account

[Creating advertising campaigns](#)

No matter how you go about it, you must have a plan in place. This can help you to identify your objectives, select the best tactics to achieve them, determine the target audience, assess the efficacy of your efforts, and improve. We have laid out the strategy that can be used by any company looking to implement the Facebook marketing campaign in the sections as follows. Follow these steps to create the best advertising campaigns:

1. Set your goals

Establishing a goal is the first step. It does not really matter what sort of business you are in; all companies have the same aims. The following objectives may be achieved on Facebook:

- Bringing in new customers
- Cultivating, qualifying, and nurturing your leads
- Increasing the number of people who visit a website
- Increasing the number of sales and conversions
- Increasing the level of client service
- Promoting the brand
- Enhancing client satisfaction and loyalty
- Recruitment

The strategies, posts, and ad types you use to accomplish your aim are predetermined by your goal. If you have a big goal, you may split it down into smaller goals. As a result, completing each one will get you one step closer to your ultimate objective. Create a set of **key performance indicators (KPIs)**, which you would use to evaluate the efficacy of each strategy. [Figure 5.11](#) illustrates how you can select a campaign objective for achieving your goals:

Create New Campaign Use existing campaign X

Choose a campaign objective
[Learn more](#)

Awareness	Consideration	Conversion
☐ Brand Awareness	☐ Traffic	☐ Conversions
☐ Reach	☐ Engagement	☐ Catalogue Sales
	☐ App Installs	☐ Store Traffic
	☐ Video Views	
	☐ Lead Generation	
	☐ Messages	

Figure 5.11: Selecting a campaign objective²

2. Define your target audience

Knowing whom you are trying to reach and how you are going to say it is all dependent on whom you have chosen as the target audience. The target audience can be of three types: saved audience, custom audience, and lookalike audience. The following questions should be answered before anything further is done:

- What is the target audience for your product?
- In general, how old are your clients?
- It is important to know what their most prevalent occupations are.
- What is the underlying issue that connects them?
- What are the benefits of using your solution?
- What are they hoping to accomplish by using it?

Create the customer profile in order to gather and save relevant information about the target audience. It must contain their age, location, gender, occupation, and income.

Facebook Audience Insights is another way to learn more about your audience. Your page's followers, your custom audience, and folks on Facebook are all included in this tool. For example, you could find out what your current audience loves, where they reside, what language they speak, what gadgets they use, and so on. You can see a sample Facebook page showing the audience insight in [figure 5.12](#):

3. Choose content formats and schedule posts

Now that you have identified your target market and determined your objectives, it is time to devise a content plan to assist you in meeting those targets. An effective content marketing strategy involves creating a detailed plan for the kinds and formats of the content that you intend to generate. Creating additional content would increase your conversion rates. Your degree of user involvement will soar if you use a variety of formats, publish consistently, and communicate with your consumers.

You also need to think about the right content combination. Marketing material alone will not help you create trust with your customers. Customers would be delighted to learn more about the product if you can provide high-quality, relevant material. [*Figure 5.13*](#) illustrates how you can schedule a post on your Facebook page:

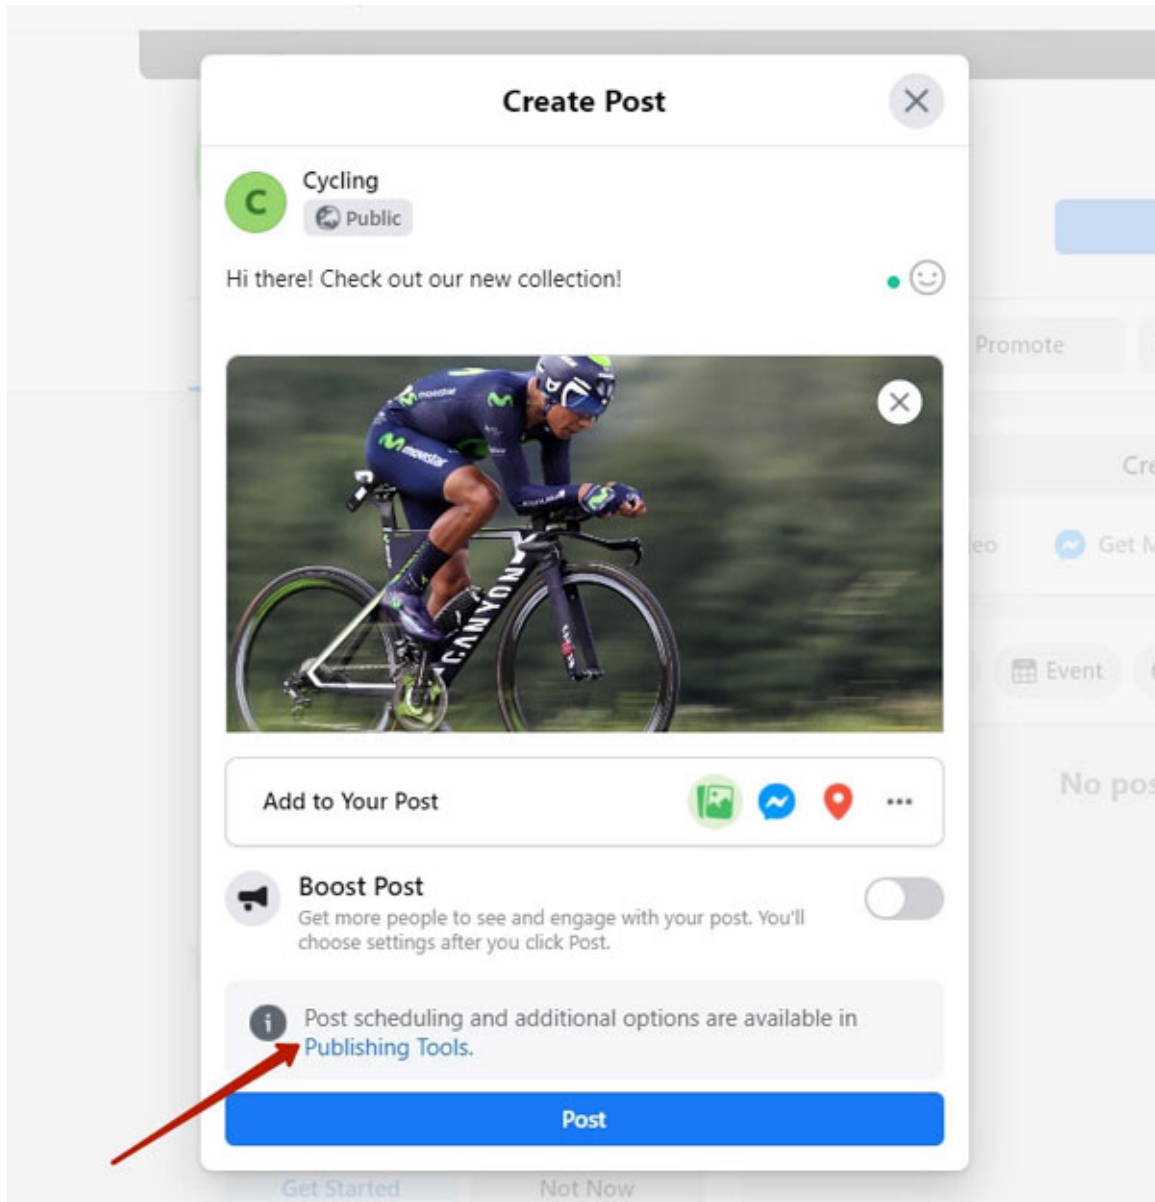

Figure 5.13: Scheduling a post¹⁰

4. Boost your post with Facebook Ads

Advertising on Facebook is a great idea. It enables marketers to reach a large audience, has a range of targeting possibilities and is reasonably priced. A bidding approach is used. You have complete control over the time, location, and demographics of your ads. You can refer to [figure 5.14](#) for a sample window of Facebook Ad Center:

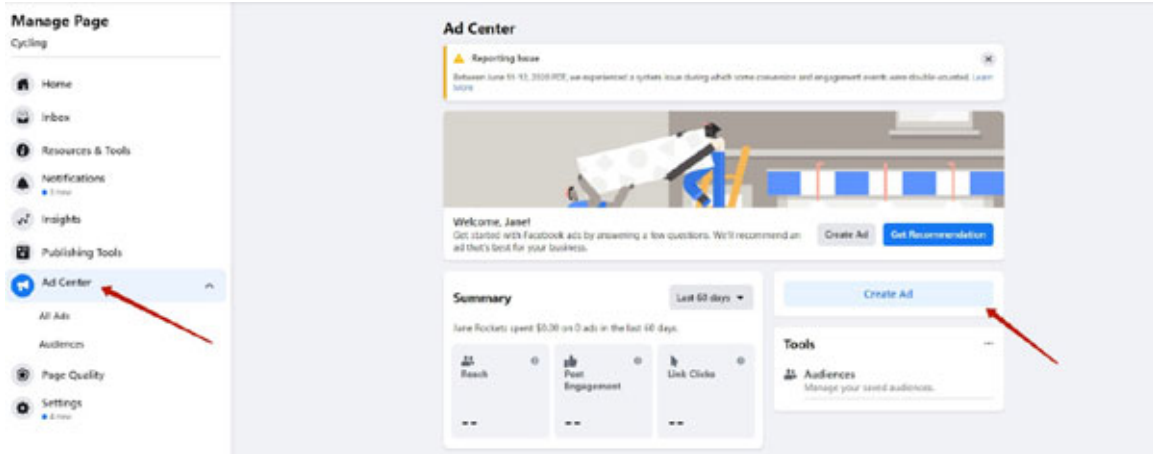

Figure 5.14: Facebook ad center¹⁰

5. Make use of Facebook tools

Facebook has a lot more to offer than most people realize. There are a number of handy tools, which may help you get the most out of this channel. For example, Facebook universal pixel as shown in [figure 5.15](#):

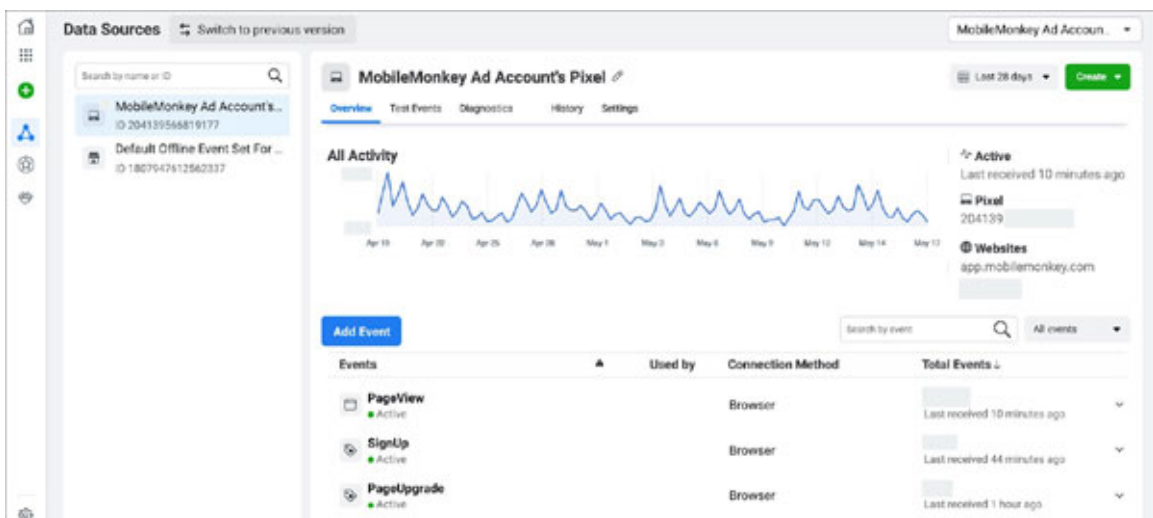

Figure 5.15: Facebook universal pixel¹¹

Facebook marketing tools

To increase the market value of your business, you may use Facebook marketing tools to connect with your target audience. The following are a few Facebook marketing tools:

Facebook Ads Manager

First up on this list is Facebook's ad tool, which must come as no surprise. For most Facebook marketers, Facebook's own Ads Manager will be the first—and, in some cases, only—port of the call.

Performance of individual campaigns over time (depending on target) may be tracked using Facebook Ads Manager's dashboard, which includes a breakdown of the campaign's total expenditure, goal, and various other crucial data points which can be viewed at a glance on Ads Manager's dashboard, see [figure 5.16](#):

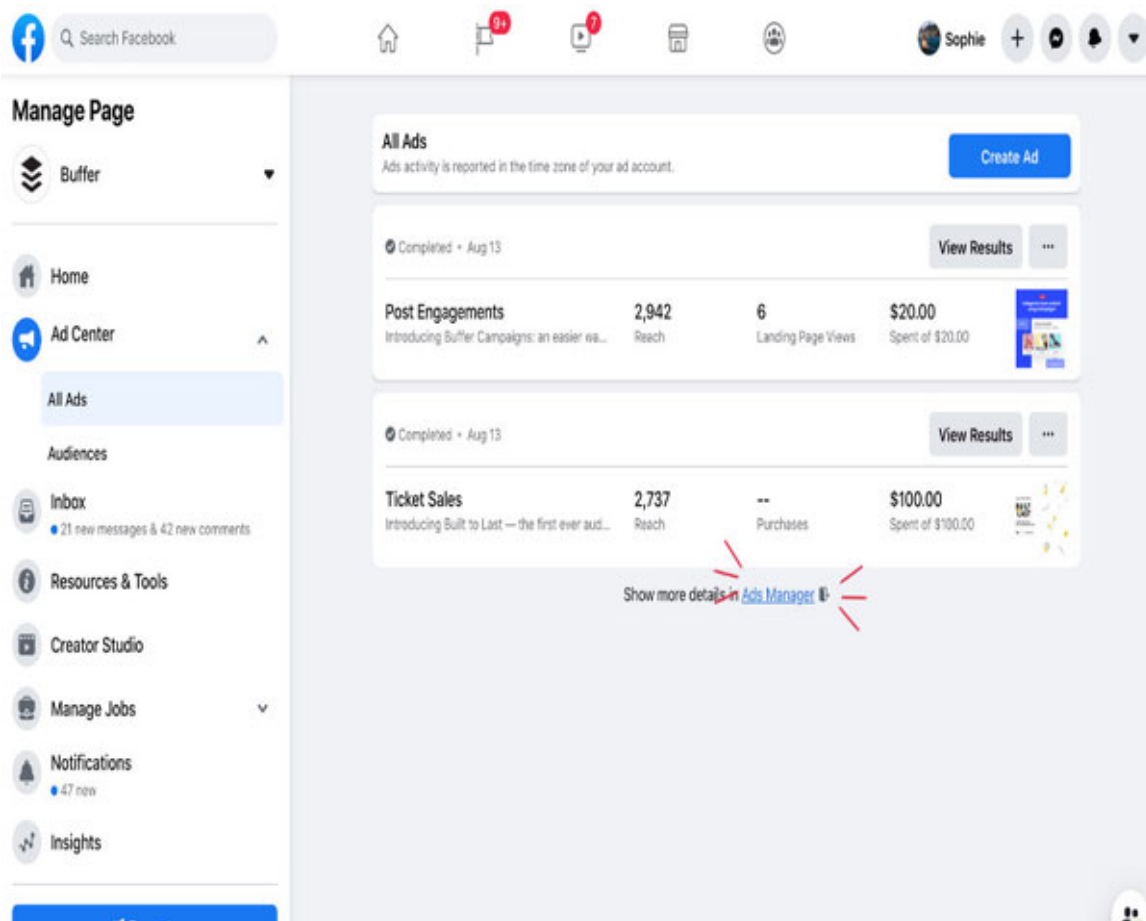

Figure 5.16: Facebook Ads Manager¹²

WordStream Social Ads

WordStream Social Ads can help you if you wish to go beyond the capabilities of Facebook Ads Manager.

WordStream Social Ads can be purchased separately or as a part of the WordStream Advisor platform, offering individualized recommendations (through 20-minute Work Week) to help small businesses make most of the Facebook Ads budgets, including when to boost posts, which audiences to target, and how to optimize their ads. The dashboard of WordStream social ads can be seen in [figure 5.17](#):

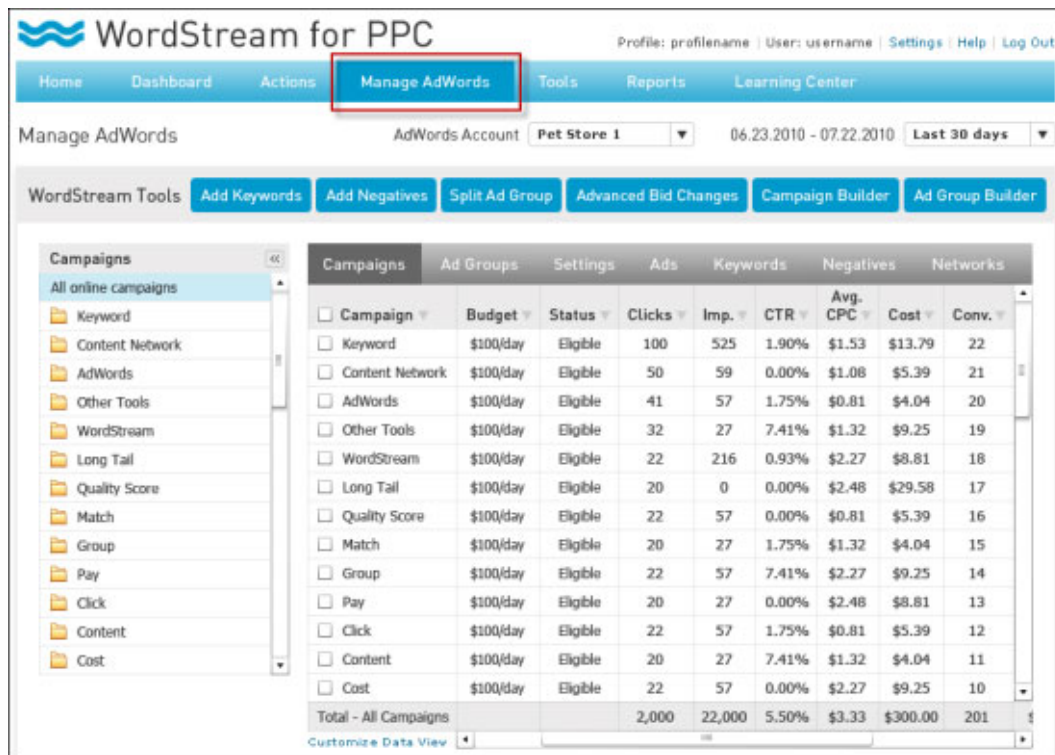

Figure 5.17: WordStream Social Ads¹³

Hootsuite

For those who have dabbled with social media scheduling, Hootsuite is among the most popular social media applications.

Hootsuite is a great tool for individuals who are just getting started with Facebook advertising. Ad production may be totally automated using Hootsuite after some basic setup. In order to develop adverts, the program analyzes the Facebook pages of individuals in order to decide which material performs well. Using this tool is a great way to get started with Facebook advertising, and it is one that allows users to target their advertisements to the correct audience at the right moment. A screenshot of Hootsuite is shown in [figure 5.18](#):

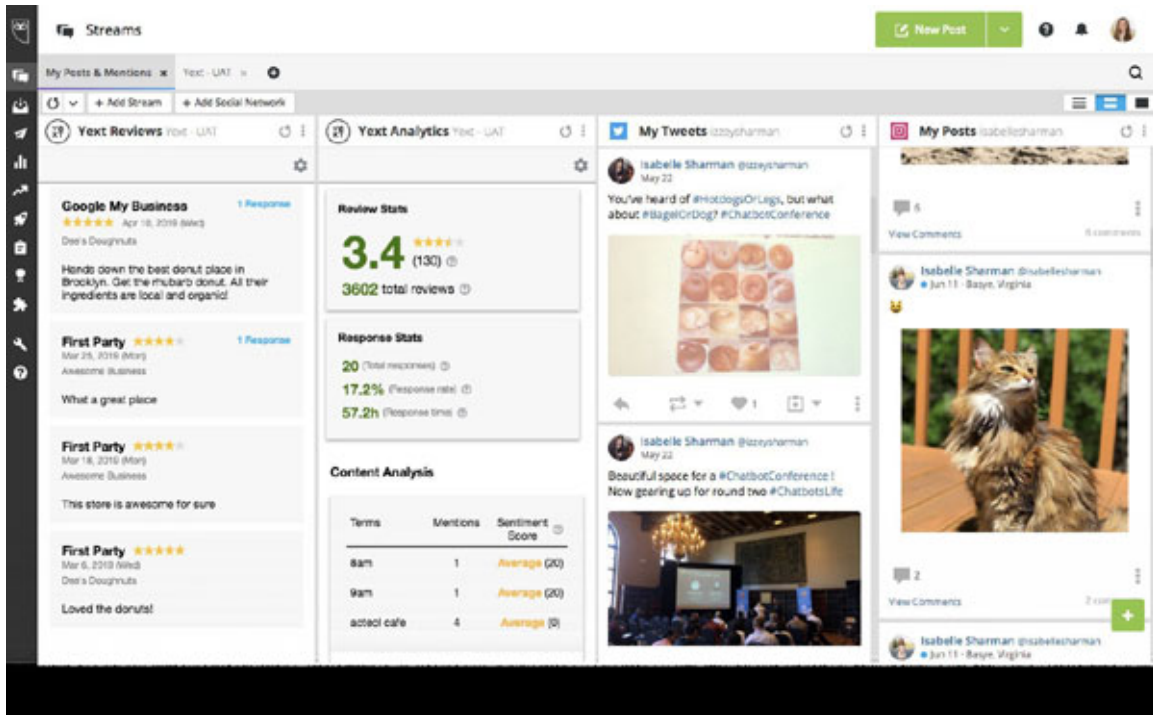

Figure 5.18: Hootsuite¹⁴

- **Driftrock**

Customer relationship management (CRM) software could be a goldmine of information for companies of all sizes. When it comes to effective marketing efforts, platforms like Salesforce may be crucial, but getting that data into the format that Facebook can use is not always easy. Here, Driftrock comes to the rescue!

Facebook and CRM data may be linked using Driftrock, allowing users to construct highly focused marketing campaigns across the customer lifetime. With Driftrock's cutting-edge technology, marketers may also choose unique "*triggers*" for their advertising, making it possible to run campaigns that are both current and dynamic. There are hundreds of data sources available for

consumers to choose from, such as local weather patterns, big sports event outcomes, and more. [Figure 5.19](#) refers to the dashboard of Driftrock:

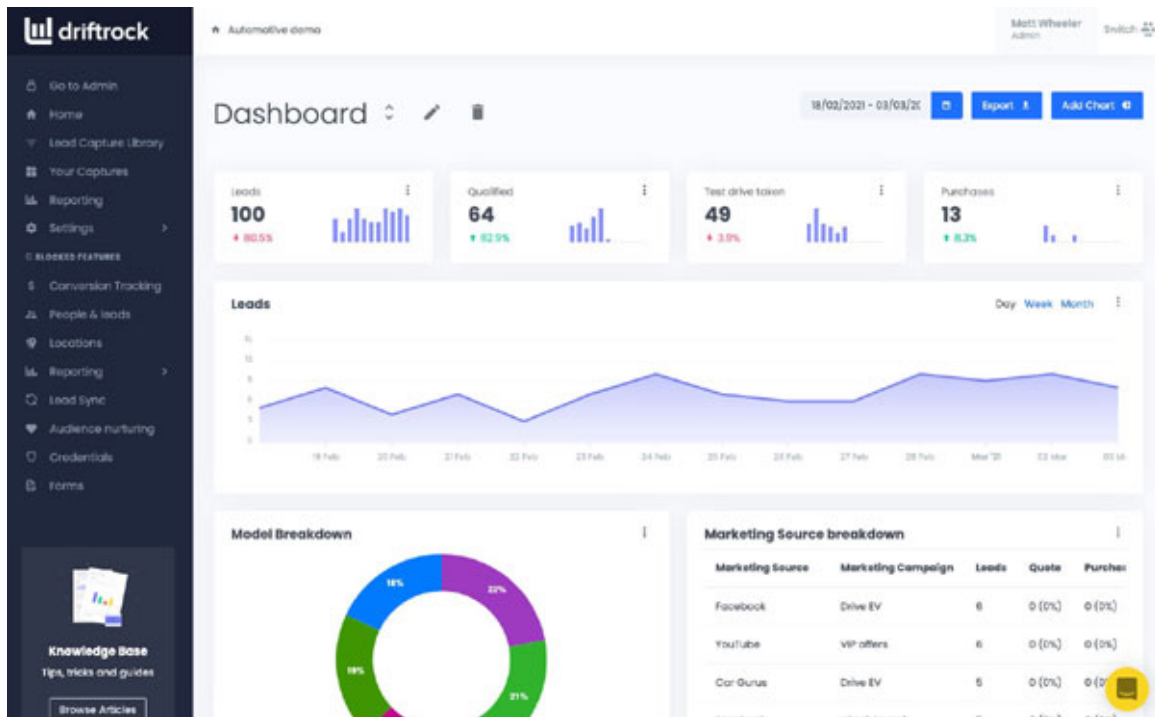

Figure 5.19: Driftrock¹⁵

- **Pagemodo**

Pagemodo is not only a Facebook advertising platform; it also has support for Twitter advertisements, making it a terrific initial step for newbies. A screenshot showing the interface of Pagemodo is presented in [figure 5.20](#):

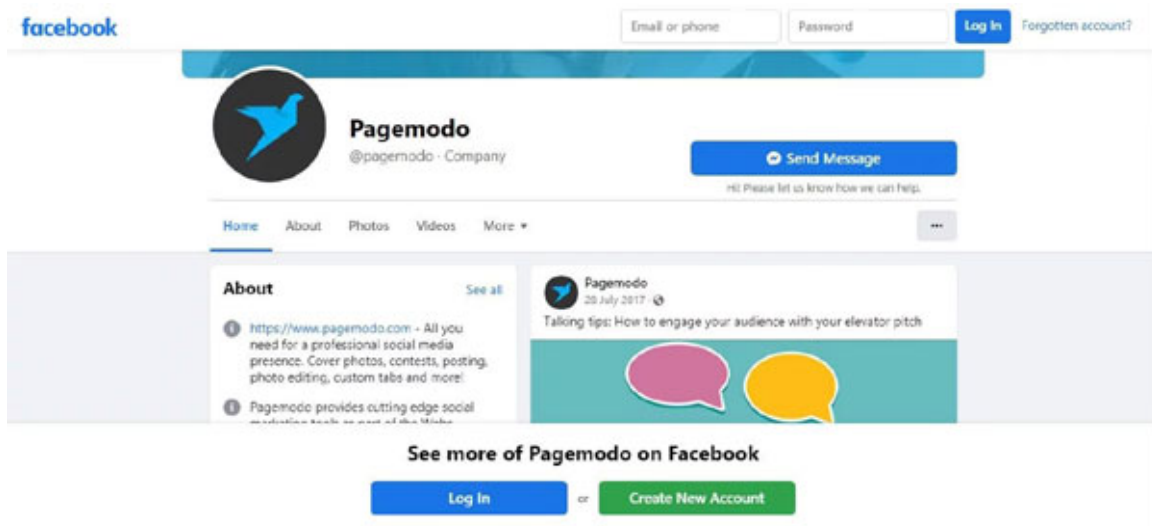

Figure 5.20: Pagemodo¹⁶

Ads management on Facebook is easier with Pagemodo. Pagemodo's ad builder is among its most useful tools. Pagemodo's built-in picture collection allows users to use royalty-free material in their advertisements, which is a huge benefit for new marketers who might not have the resources of even more established, bigger teams.

Those who are new to Facebook advertising may also benefit from Pagemodo's streamlined approach to audience targeting and segmentation. With its simple analytics and performance assessment tools, Pagemodo is the perfect alternative for companies just starting to explore Facebook advertising.

Conclusion

An effective content marketing strategy involves creating a detailed plan for the kinds and formats of the content that you intend to generate. Facebook has a lot more to offer than most people realize, and there are a number of handy tools which may help you get the most out of this channel.

Marketers can use Facebook advertising to improve the exposure of their advertisements, raise awareness of their brands and track key performance indicators and campaign objectives. A pay-per-click model is used for Facebook advertising, wherein you pay a network every time the user clicks on an ad.

Hootsuite is a great tool for individuals who are just getting started with Facebook advertising. Facebook and CRM data may be linked using Driftrock, allowing users to construct highly focused marketing campaigns.

Users may also choose unique "*triggers*" for their advertising, making it possible to run campaigns that are both current and dynamic. Pagemodo's built-in picture collection allows users to use royalty-free material in their advertisements.

In the upcoming chapter, you will learn about the importance of LinkedIn marketing and will be able to frame a LinkedIn marketing strategy for promoting your brand on this social media platform.

Key terms

- **Saved audience:** To target people with particular interest, behavior, income and location, and so on.

- **Custom audience:** People who are already your customer or well aware of the brand or the product.
- **Lookalike audience:** People who have the same features as the source audience.
- **Advert:** An advertisement
- **Facebook Ad Manager:** A Facebook marketing tool.
- **Customer profile:** Relevant information about the target audience.

Questions

1. What is a Facebook page?
2. What is Facebook marketing?
3. Why you should use Facebook marketing?
4. What kinds of customers are affected by Facebook marketing?
5. Why Facebook marketing is good for the business?
6. What are the steps one should follow to succeed to have good Facebook marketing?
7. Differences between Facebook marketing and other digital marketing.

Class exercise

1. Design a Facebook ad for a product or brand of your choice.
2. Use Facebook ad manager for analyzing the success of your ad campaign.

CHAPTER 6

LinkedIn Marketing

Introduction

This chapter introduces you to LinkedIn marketing. LinkedIn is one of the best social media platforms for generating leads and offers personal ways of identifying potential customers. This chapter discusses the importance of LinkedIn marketing and the different types of ads LinkedIn offers for marketing. This chapter also provides details about how LinkedIn should be used by marketers for generating and converting leads.

Structure

In this chapter, you will learn about the following topics:

- Introduction to LinkedIn
- Importance of LinkedIn marketing
- LinkedIn ads
- Sponsored content
- Lead generation through LinkedIn
- LinkedIn content strategy
- Analytics and targeting

Objectives

After reading this chapter, the reader will learn that LinkedIn as a marketing tool is an invaluable addition to their digital marketing strategy. The reader will be able to use this next-level marketing for framing a LinkedIn marketing strategy and will also be able to use LinkedIn analytical tools for measuring the success of the LinkedIn marketing strategy.

Introduction to LinkedIn

LinkedIn is a professional networking platform that allows your business to grow by targeting your own networking and generating more leads from it. LinkedIn generated the highest visitor-to-lead conversion rate at 2.74%, almost three times higher (277%) than both Twitter (0.69%) and Facebook (0.77%). LinkedIn's conversion rate also outranked social media as a channel overall. In other words, of all the traffic that came to these businesses' websites via social media, 0.98% of that traffic converted into leads, compared to LinkedIn's 2.74%. [Figure 6.1](#) illustrates this:

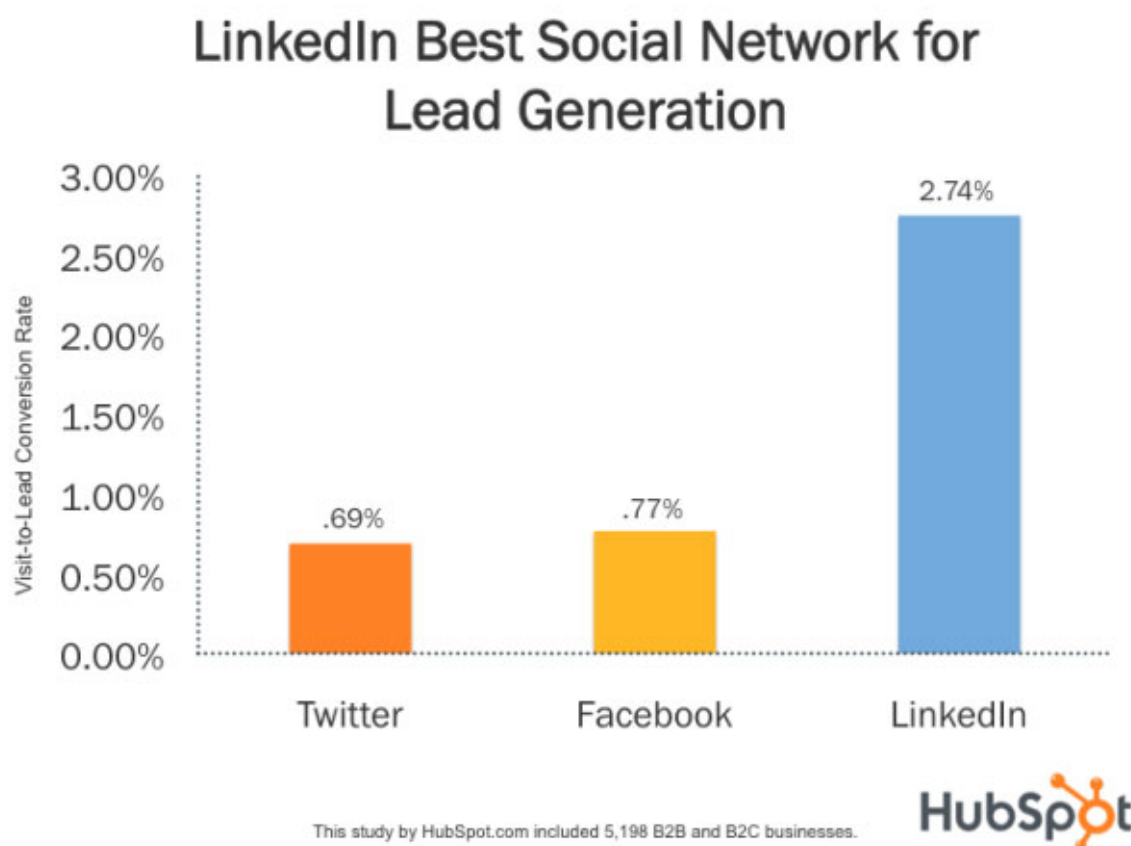

Figure 6.1: Graph showing LinkedIn as the best social network for lead generation^{[L](#)}

This social media platform is also used by businesses for creating a credible and meaningful network for building brand awareness and relationships with consumers. You can use this platform to boost your brand by exposing the business to millions of connections worldwide. Marketers can use this tool for building relationships with potential customers, employees, and business partners. Social media platforms such as Facebook, Twitter, and Instagram are generally used for marketing products or services to potential customers, whereas LinkedIn is used more for building relationships and lead generation.

Importance of LinkedIn marketing

LinkedIn is the world's largest professional network, with more than 830 million members in more than 200 countries and territories worldwide². LinkedIn has become a great marketing opportunity provider for businesses as they can enhance their email marketing list by using this professional network. Marketers can engage potential customers and business partners by posting relevant content on LinkedIn. [Figure 6.2](#) illustrates the growth of this professional network over the years:

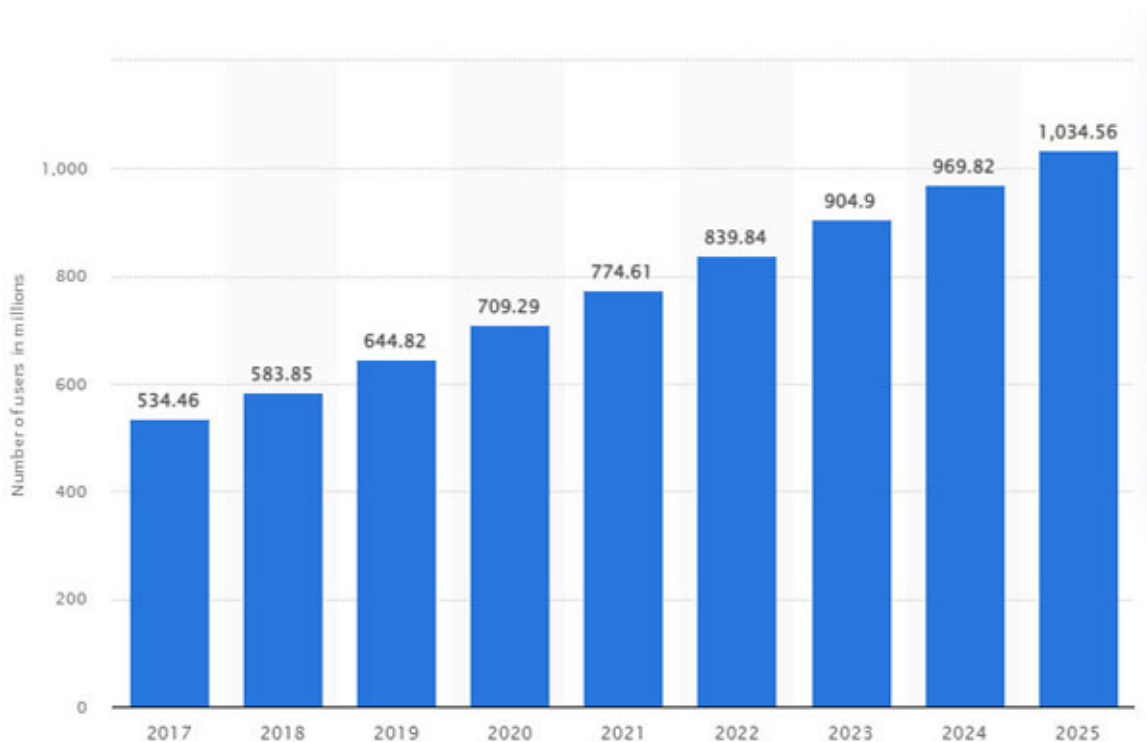

Figure 6.2: Graph showing the increase in the number of LinkedIn users in the world³

A wonderful marketing opportunity generator, LinkedIn is a professional networking tool. You may expect to find information about career progression, industry contacts and much more here. Using LinkedIn as a marketing tool is advantageous. It is a great place to showcase your abilities and promote your company's offerings. Making additional linkages from your own network is part of this strategy. You need to accomplish the following in order to market on LinkedIn:

- Creating an eye-catching company page that showcases your goods and services.

- Clients and suppliers should be encouraged to *like, follow, and share* your page.
- Creating a group for your company. It has the potential to draw a large number of visitors.
- Targeted advertising is a great way to reach your intended audience.
- As a social networking platform, LinkedIn is the strong one. Your only responsibility is to adhere to the organization's rules and procedures.

Today, LinkedIn is the most popular professional social media site. Since its inception, social media has grown to be a valuable resource for both people and businesses alike, allowing them to communicate with one another, cultivate client connections, find new customers, and more. A few organizations have not yet adopted a LinkedIn strategy for marketing their brand or expanding their company. Because of the competitive nature of today's business world, the lack of a LinkedIn marketing plan means that you are losing out on a lot of chances.

Framing LinkedIn strategy

LinkedIn is not a place where you can pitch your goods or services as you may on other social networking platforms. Because of this, you cannot rely on hard selling or other methods of promoting your brand. That is because of the demographics of the people in the audience. This gives you even more reasons to craft your LinkedIn marketing plan wisely as a business.

Defining your goals

The first step to an effective LinkedIn marketing plan is to clearly define your objectives. LinkedIn may assist you to do a number of things in addition to serving as the link between employers and employees:

- **Increasing brand awareness**

A LinkedIn profile allows prospective customers to find your businesses and get in touch with you to discuss the goods and services you provide. Your brand may be discovered by talented people, and they become a great addition to your company.

- **Expanding business contact**

In order to interact with the other business geniuses in your field, you should have a LinkedIn company profile that is regularly updated. You may use your presentation to persuade them to grant you a favor in exchange for promoting your company's objectives. Think of something you could offer back to them in exchange for a favor before pitching them to get their attention.

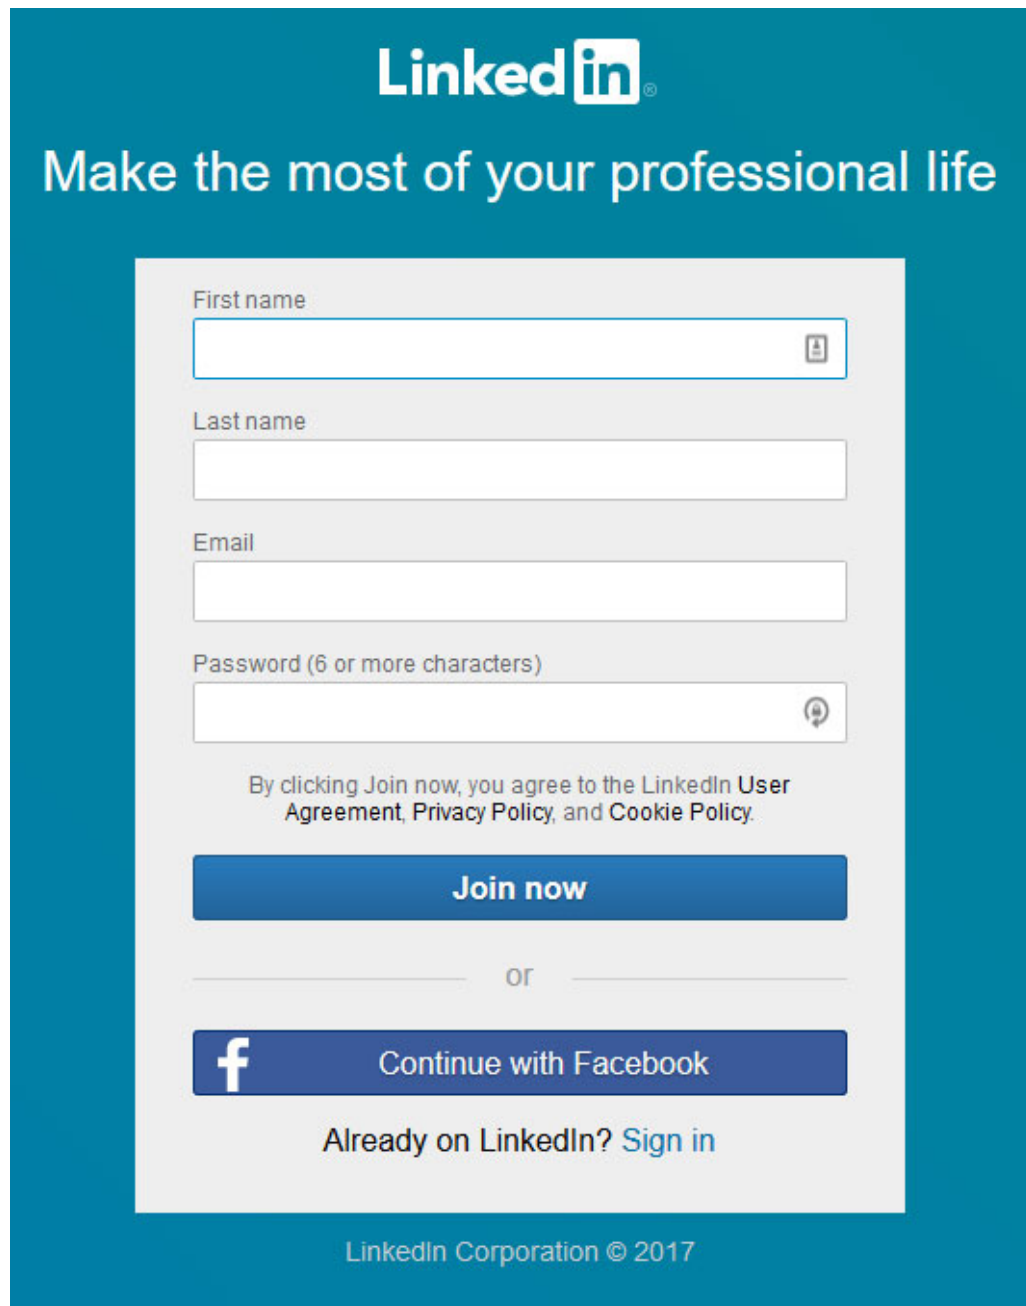

- **Credibility is essential for attracting new business partners.**

It is safe to say that LinkedIn is among the most reliable social networking sites. It gives you the opportunity to present yourself in a professional manner and to establish your reputation in the eyes of possible business partners. It makes it possible for prospective clients to connect and get to know each other better.

Creating a business account

In the same way that you would create a business account on Facebook or Snapchat, you should do the same on LinkedIn. After all, it is where you will be meeting your potential clients. On LinkedIn, these are the procedures for building a business profile that you need.

1. Go for **linkedin.com** and login. The login screen looks like as shown in [*figure 6.3*](#):

The image shows the LinkedIn login page with a teal background. At the top is the LinkedIn logo and the text "Make the most of your professional life". Below this is a white login form. The form contains four input fields: "First name", "Last name", "Email", and "Password (6 or more characters)". Each field has a small icon on the right (a person for first name, a lock for password). Below the fields is a line of text: "By clicking Join now, you agree to the LinkedIn User Agreement, Privacy Policy, and Cookie Policy." Below this is a blue "Join now" button. Underneath the button is a horizontal line with the word "or" in the center. Below the line is a blue button with the Facebook logo and the text "Continue with Facebook". Below this button is the text "Already on LinkedIn? Sign in". At the bottom of the form is the text "LinkedIn Corporation © 2017".

LinkedIn

Make the most of your professional life

Last name

Email

Password (6 or more characters)

By clicking Join now, you agree to the LinkedIn User Agreement, Privacy Policy, and Cookie Policy.

Join now

or

f Continue with Facebook

Already on LinkedIn? [Sign in](#)

LinkedIn Corporation © 2017

Figure 6.3: LinkedIn login page⁴

2. Create the company page by selecting **Create a Company Page** option, as shown in [figure 6.4](#):

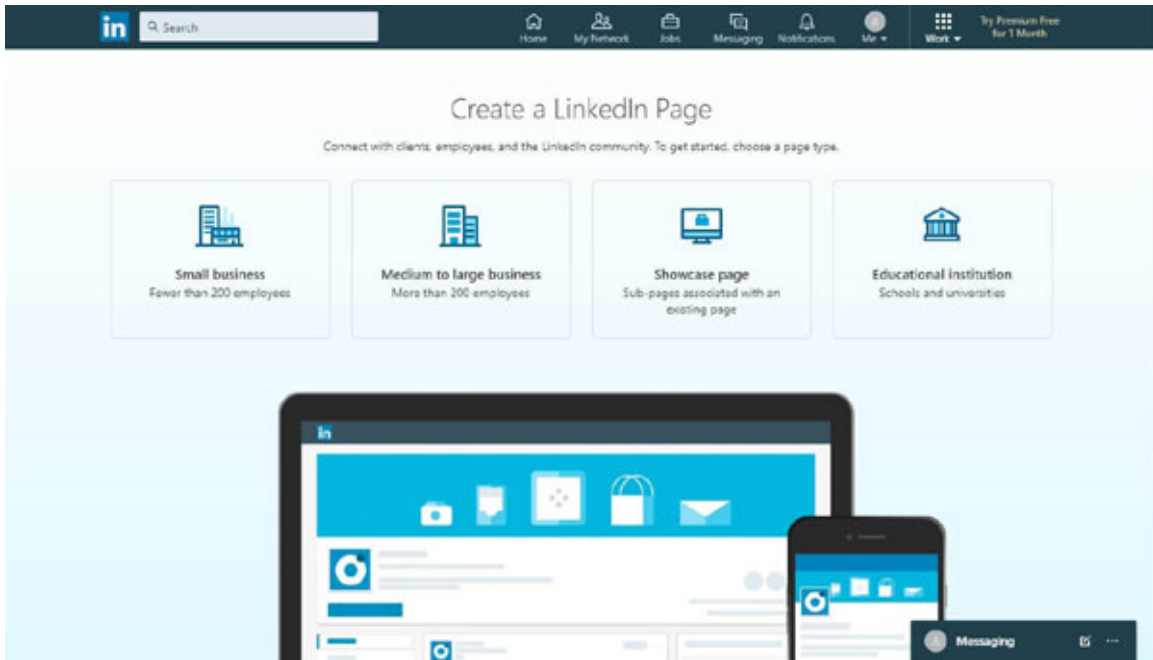

Figure 6.4: Create company page⁵

3. From the available choices, just choose the page you wish to create. Any kind of company, from a tiny startup to a major corporation, may be included in this type of business. It is time to get to work filling in the specifics of your page's identity and profiles, including corporate information, as shown in [figure 6.5](#):

Figure 6.5: Company details to fill on LinkedIn page⁶

4. Verify the legitimacy of the action by checking your verification box.

Optimizing LinkedIn business profile

Your company's LinkedIn profile is indeed the public face of your company on the social media network. It is a chance for you to connect with your audience, provide news and attract talented staff. LinkedIn, on the other hand, has millions of profiles. If you want to get noticed on LinkedIn by your target demographic, you must do something creative:

- **Create a comprehensive cover image**

When someone enters your company's LinkedIn page, the very first thing they see here is the cover photo. To keep them interested, it should pique their interest in learning more about your business. Your cover photo should reflect your company's values, vision, and goal.

- **Focus on the description**

By using the firm's LinkedIn profile description area, you can showcase your skills as a thought leader and boost brand recognition while attracting new leads.

Sharing your page

Whenever you join LinkedIn, your road to success starts. In the meanwhile, you will need to put in some effort to establish your identity. Invite your staff to help you with this. Send them an email letting them know you are on LinkedIn, inviting them to join, and asking them to identify your company as their place of employment.

Conducting a competitive analysis

Making a good LinkedIn marketing plan necessitates doing a competitive study. It allows you to learn from competitors' LinkedIn marketing strategies and use that information to improve your own.

Social media sharing of LinkedIn updates

Linking your LinkedIn account to other social media platforms is another technique to boost interaction on LinkedIn. LinkedIn's biggest traffic sources are Facebook and Twitter.

Brands may use their existing Facebook or Twitter following to expand their LinkedIn consumer base. It is a quick and simple technique to boost interest in your company's LinkedIn handle. LinkedIn allows you to publish on several social media accounts at the same time.

Joining groups

As with other social media platforms, groups are a terrific location to start a discussion. Yes, you are free to form your own group.

LinkedIn ads

LinkedIn's advertising business has grown more than five times over the past years and is in the top three B2B digital advertising platforms.⁷ LinkedIn ads are more effective in reaching a professional target audience. LinkedIn ads are paid advertisements on this social media platform through different posts. It is a very powerful tool for building leads, sharing content, and increasing online recognition for B2B companies. [Figure 6.6](#) illustrates the benefits of using LinkedIn ads:

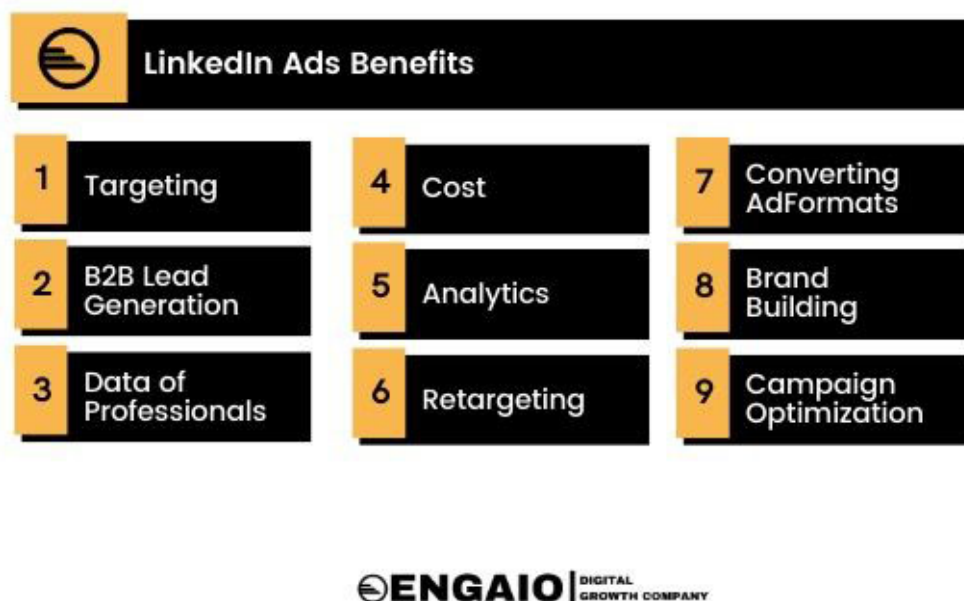

Figure 6.6: Benefits of LinkedIn ads [8](#)

B2B companies are using LinkedIn ads for promoting their presence on LinkedIn. There are four types of LinkedIn ads that can be used to achieve your campaign's objectives.

Sponsored content

If you want that people keep talking about your brand, you should use sponsored content. This type of ad is used for content promotion for increasing the number of followers. The goal of this type of ad is to increase brand awareness. You can publish native ads in the LinkedIn newsfeed by using sponsored content. [Figure 6.7](#) shows a native ad across desktop and mobile:

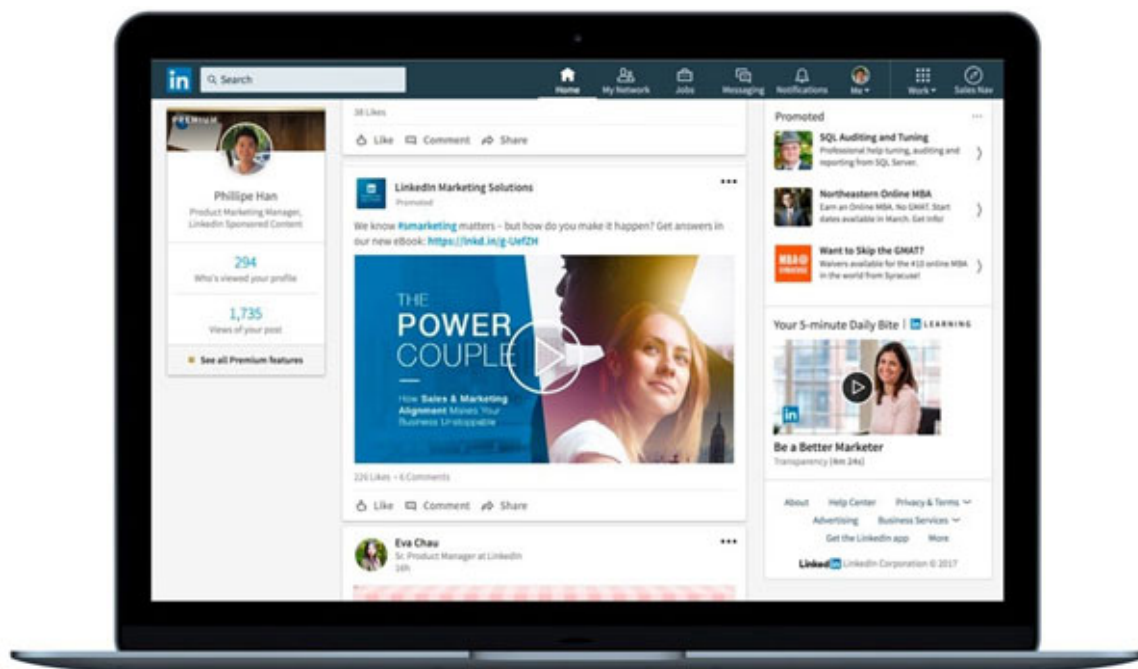

Figure 6.7: Sponsored content ad²

Sponsored messaging

This type of messaging is also known as Sponsored InMail. If you want to send personalized messages to the LinkedIn members in your network, you can use this type of ad. LinkedIn imposes a limit on the number of messages you can post to your contacts each day. [Figure 6.8](#) shows an example of sponsored messaging:

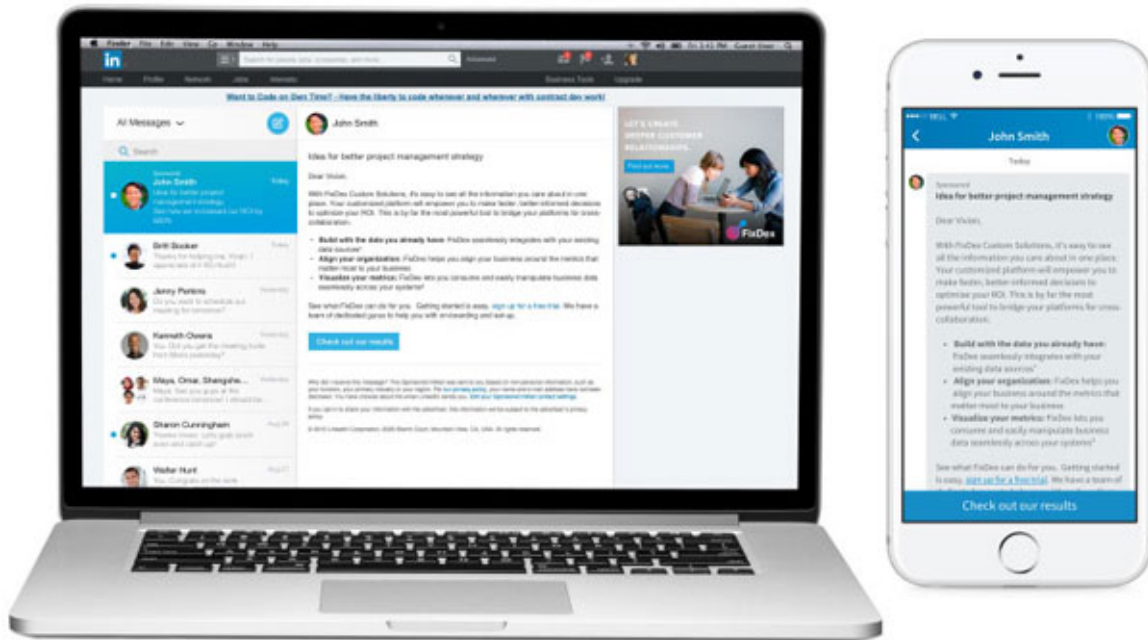

Figure 6.8: Sponsored InMail ad [10](#)

Text Ads

Text Ads are the same as Google ads which can be used to create a product landing page or any other Webpage for getting more leads and conversions for your brand. An example of a Text Ad is shown in [figure 6.9](#):

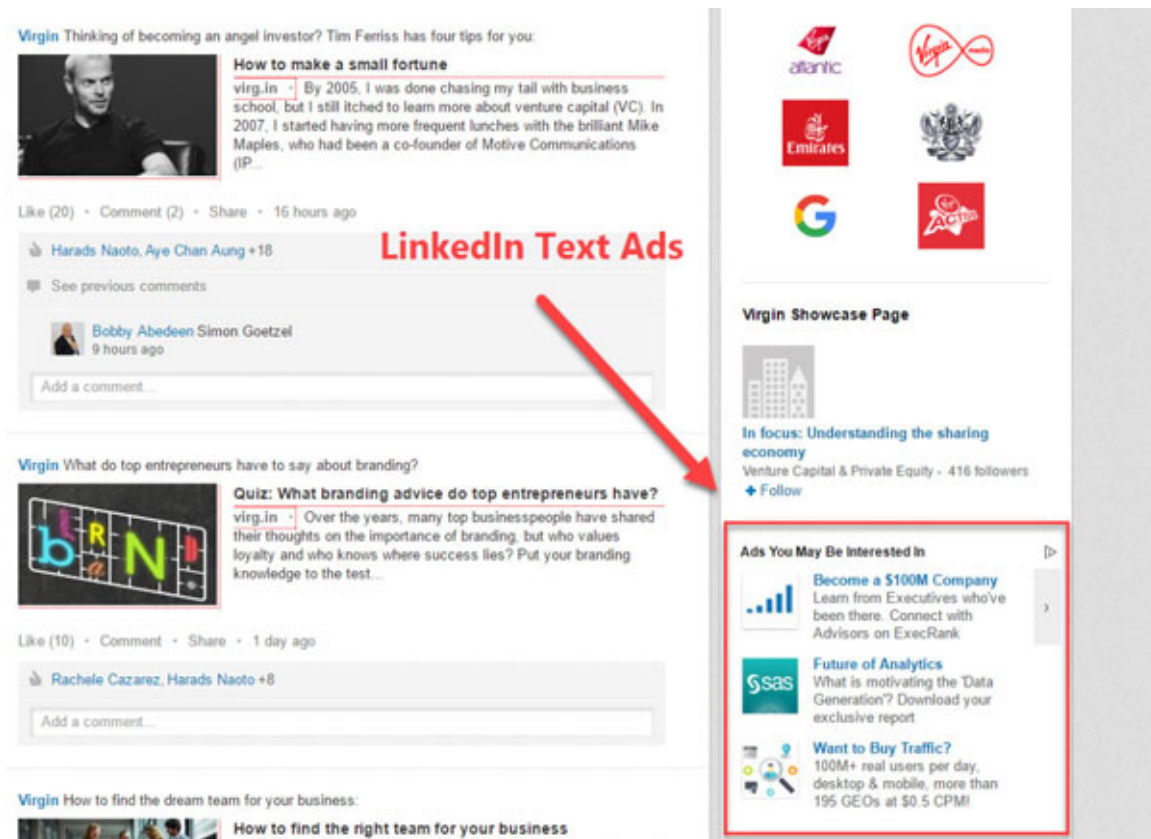

Figure 6.9: LinkedIn Text Ad [Link](#)

Dynamic ads

This type of ad is used for creating personalized content for connecting with your potential customers. You should collect information such as names, job titles, and so on from LinkedIn profiles and use these details for creating a personalized dynamic ad. [Figure 6.10](#) shows a sample of dynamic ad:

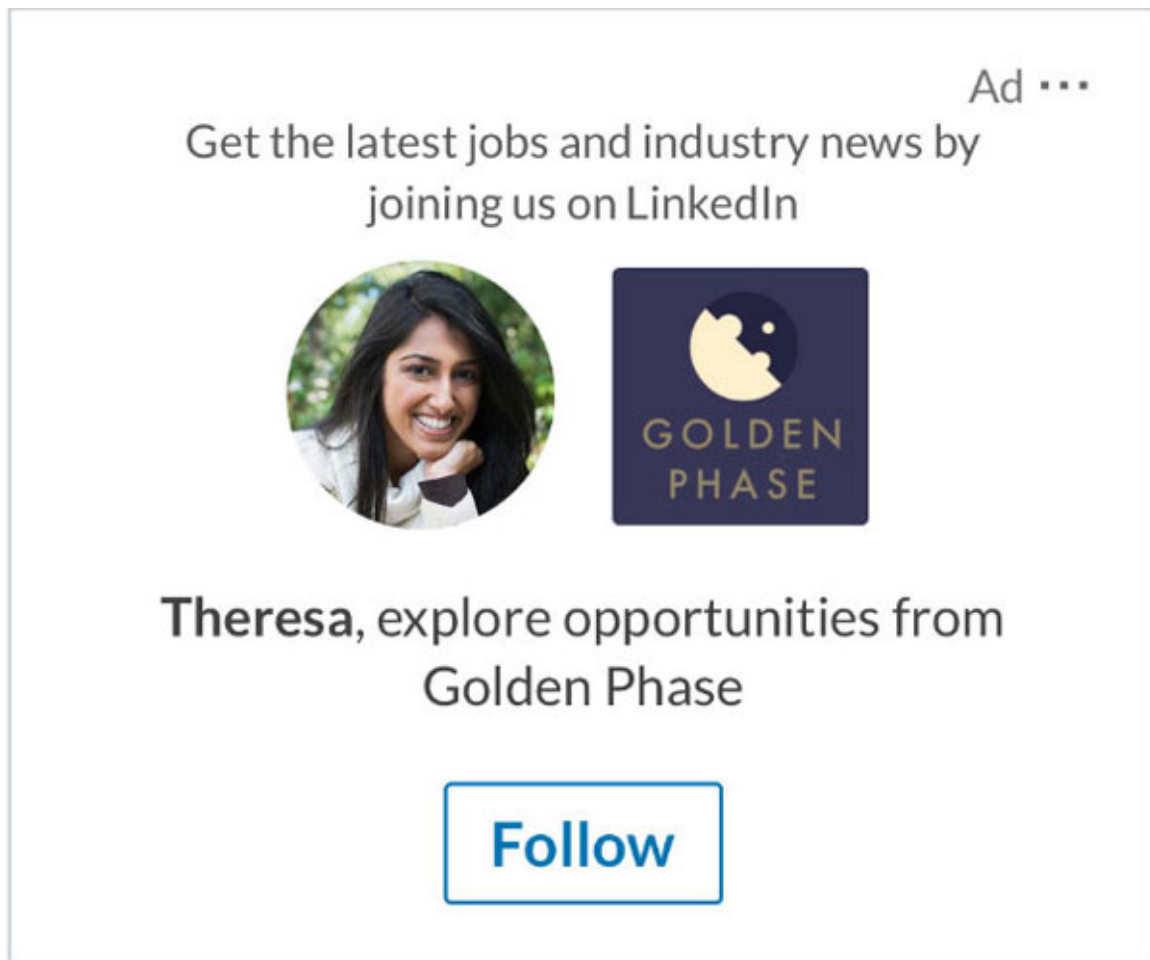

Figure 6.10: LinkedIn dynamic ad [12](#)

Lead generation through LinkedIn

Activities and techniques you do in the pursuit of new consumers are referred to as a lead generation. When you generate leads, you have the opportunity to nurture those leads into paying customers who use your goods and generate income.

With LinkedIn, you will be able to communicate directly to the people who could become paying clients. We will go through several strategies for generating leads using LinkedIn in the sections that follow. [13](#), [14](#)

Reaching relevant audiences

When it comes to marketing on LinkedIn, one of its biggest advantages is that you also have access to almost all of your prospective clients in one spot. To

put this into perspective, you could:

- **Concentrate your marketing efforts on the most promising new customers:** A wide range of LinkedIn's advanced targeting options allow you to offer your content and adverts to users who are more likely to act and generate high-quality leads, use lookalike audiences and so on in the course, which teaches you how to prevent the hyper-targeting.
- **In order to cultivate prospective consumers, use retargeting:** Building target audiences of LinkedIn users who have previously shown interest in your goods or services by visiting your website, attending an event or seeing an educational video is a great way to nurture prospective consumers.

Considering your leads

You need to consider your leads beyond filling out a form. If you want to know how valuable a lead is to your business in the long run, you need to look at more than just how much it charges to convert a new customer. Before launching your campaign, ask yourself the following six questions:

- What is the definition of a sales conversion in the company?
- How lengthy the sales cycle is for your company?
- How would you describe the quality that led to you?
- Are you taking advantage of marketing automation?
- How long does your sales staff take to respond to leads that come in?
- What methods are used to nurture potential customers?

The overall quality of your leads is critical after your campaign is up and running. You may use LinkedIn's conversion tracking to learn more about your audience's quality. Your campaigns would be better understood as a result of this knowledge; examples include the following:

- **Additional metrics:** A better understanding of your advertising's effect will be gained by having access to post-view and post-click conversions.
- In addition, there are attribution features available. The way each ad interaction is counted toward conversion in various campaigns may be customized whenever setting up the conversions. Every campaign may have its own attribution model, or it could be applied to all of them at once.

- **Insights that go deeper:** As a marketer, you may use demographic data to learn more about the people who are most likely to convert. This would help you enhance the campaign's targeting and content alignment. Through the usage of such elements, you may learn how to precisely define the fundamentals and progress toward optimization of lead-generating methods.

Optimizing your campaign

Whether you are dealing with high engagement and low conversion rates or leads that are not turning into **Sales Qualified Leads (SQL)**, it is really necessary to understand your target audience. To optimize your campaign, you should have a broader target audience for getting maximum impressions. You should optimize the daily budget so that it lasts throughout the day. For optimizing your campaign, have three to four different types of ads for a single campaign for understanding the customer's behavior. Each ad should create some value proposition so that the potential customer has enough reasons to click on it and resulting in increased CTR. You should create a campaign such that it is going to maximize the performance by increasing ROI. To maximize ROI, you should stop your campaign if the conversion rate is less than 2%. If it is more, then you should increase the bid.

Measure and report

You are looking for a loyal customer base which you can rely on in the long run, measure your campaign's success in order to achieve this. Examine the post-campaign analytics, including the number of sales conversions and the value of every transaction, in addition to campaign success. This way, you will be able to see how much money your campaign is bringing in for your company. You can collect real-time data for measuring the performance of your campaign through LinkedIn reporting. You should use the conversion tracking option available in LinkedIn ad manager for getting an insight into how your campaign is performing in terms of generating leads, purchases, and event registrations. [*Figure 6.11*](#) shows a sample window of LinkedIn's Campaign Manager:

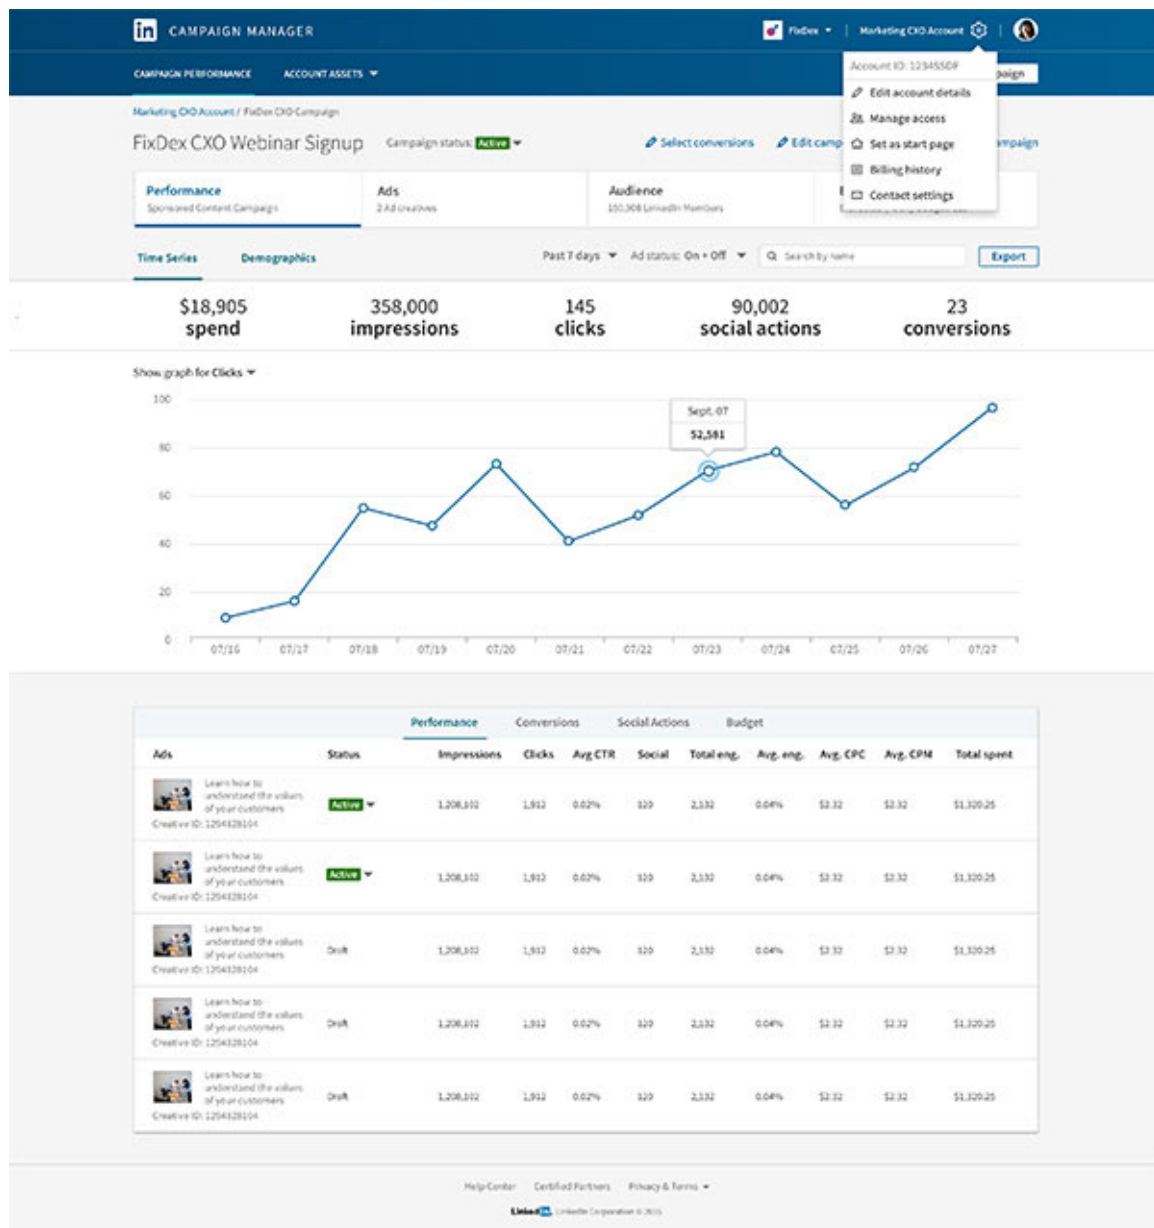

Figure 6.11: LinkedIn Campaign Manager ¹⁵

Using LinkedIn marketing partners

You can use LinkedIn marketing partners to boost your campaigns to the next level. Assisting you in the creation of world-class content, LinkedIn partners could also assist you in attracting and nurturing the proper audience. It is easier to target your adverts to a specific group of people when you use LinkedIn data integration partners. There are a number of ways that lead from integration

partners may make it simpler for you to manage your pipeline and communications in a consistent manner.

Content strategy

For a successful content strategy, you will need to spend some time creating it and planning it out. In order to satisfy the virtual community that really is continuously on the lookout for fresh stimuli, content creators must be creative and innovative.

There are six phases involved in developing the LinkedIn content strategy for each of these reasons.

Outlining the ideal reader profile

The first step is to figure out who you are trying to reach with your company's LinkedIn page. What are the issues of the most interest to the ideal user?

In order to identify the target audience, you must conceive the receiver as the reader and the demographic and also lifestyle target. If the user discovers valuable information on the social network, they might choose to connect with your company by praising, loving, or spreading it around.

Identifying the objectives

The next stage in developing the LinkedIn content strategy is to identify your desired outcomes. Whether the goal is to get attention, gain consideration, or bring in new customers, the content and messaging used in the communication strategy must be tailored to each unique aim.

Defining metrics

What is the purpose of metrics? Which factors must be considered? Everything is subject to change based on the goals that need to be met. This phase is critical since it will be used in the future to examine the outcomes and enhance the marketing strategy's success. Like followers' demographics, followers count, rate of engagement, impressions and reach, and so on.

Outlining the editorial strategy

Both of the following actions are part of editorial strategy, but they are not the same thing:

- The goals, definition of organic and sponsored articles, mood and also the roles but also resources used (for example, who is in charge of an editorial plan and content generation) are all part of an editorial plan.
- The publishing schedule includes the types of material to be released and how often they will be published.

Type of content

For now, let us get down to business. Users are drawn to a brand by the content it provides. Organic or sponsored content should be selected and created with care in order to provide users with useful and high-quality information.

Measuring results

Aside from assessing the KPIs we have discussed previously, we have already finished defining the calendar, editorial strategy and producing and publishing the material.

Our ability to gauge if our content strategy is working is aided by data like demographics, count of followers, engagement rates, and the amount of traffic, which LinkedIn postings bring to our website.

Analytics and targeting

Whenever it comes to determining your social media ROI and achieving your social media objectives, LinkedIn analytics is always a tool to use. [*Figure 6.12*](#) illustrates the dashboard of the LinkedIn analytics tool. As a result of using LinkedIn analytics, you will be able to tell when you have accomplished a new milestone, such as the record audience growth, involvement, or conversions, as follows in easy stages:

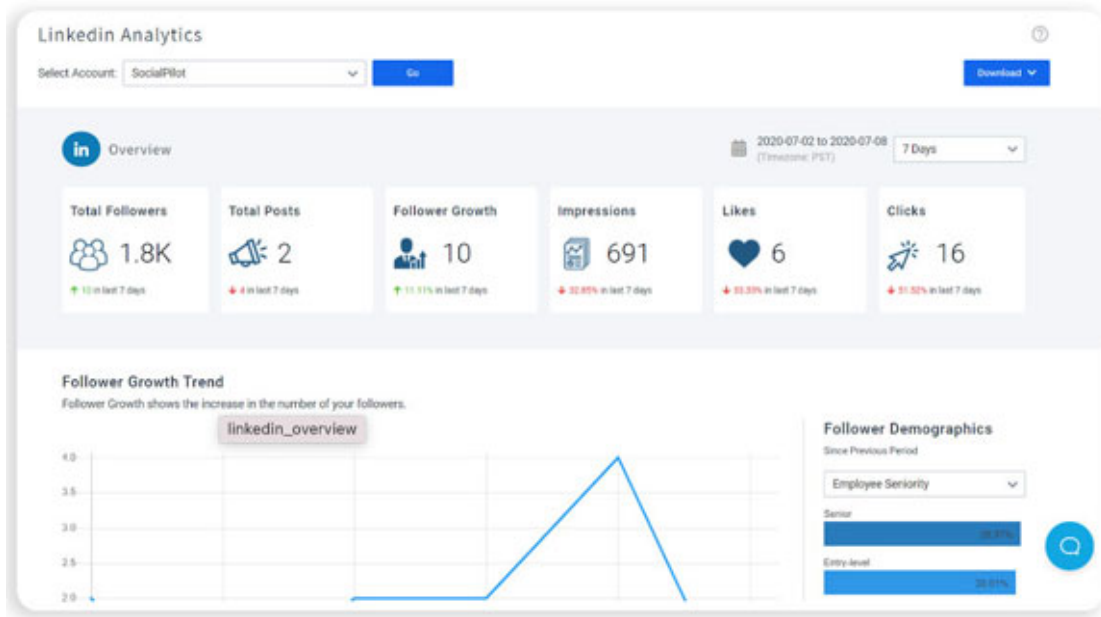

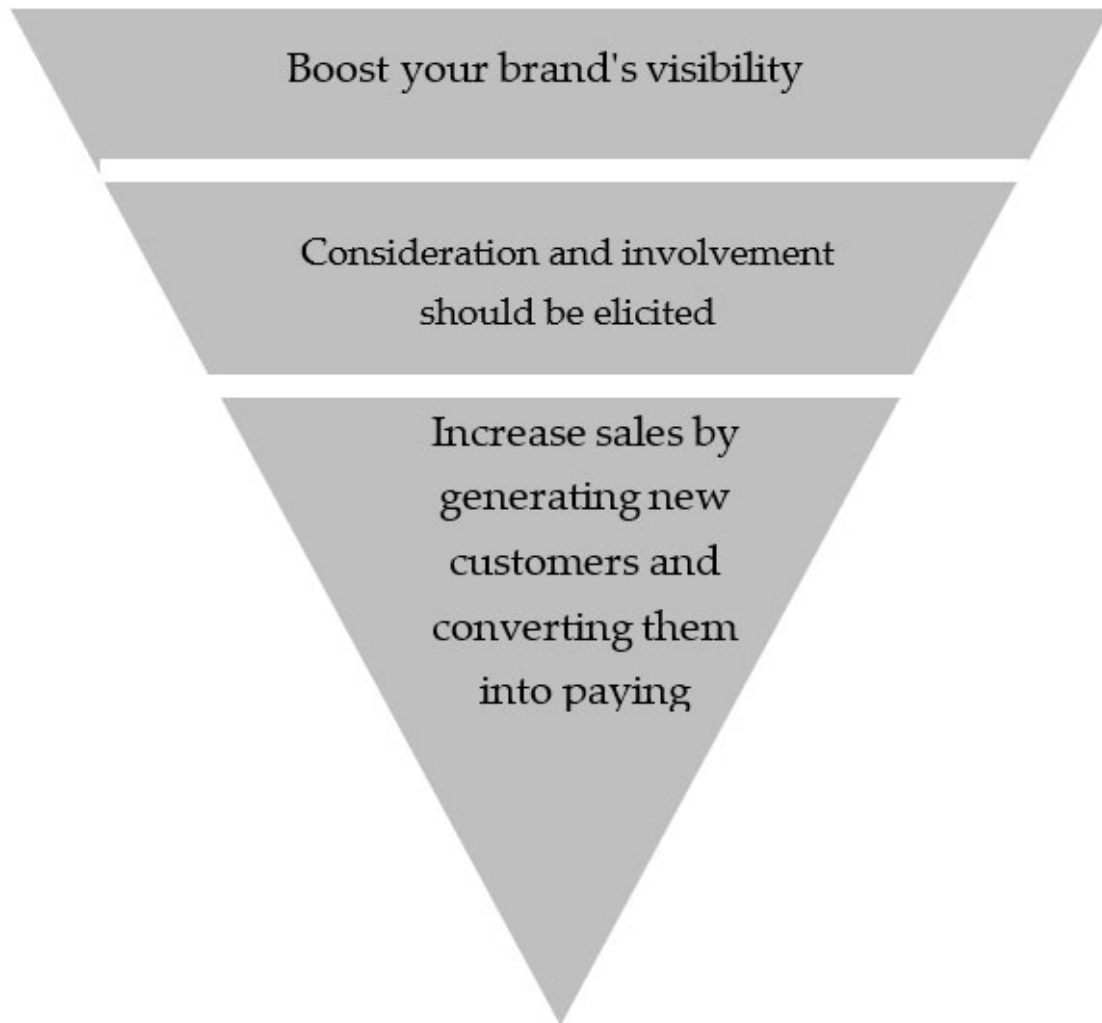

Figure 6.12: LinkedIn analytics tool [16](#)

Choosing your objectives

The following are the three most prevalent aims of the marketing campaigns, as shown in [figure 6.13](#):

- Boost your brand's visibility (the upper funnel)
- Consideration and involvement should be elicited (mid-funnel)
- Increase sales by generating new customers and converting them into paying customers (the bottom funnel)

Increase sales by generating new customers and converting them into paying customers

Figure 6.13: Marketing campaigns funnel showing the three most prevalent aims [17](#)

Important metrics

It is necessary to determine which metrics are most important to your campaign's success. You will need a lot of views and attention if you are trying to raise awareness of your business (denoted by clicks on ads). Pay attention to the following parameters:

- **Clicks:** The number of times your ad's links were clicked on.
- **Impressions:** How often your ad was shown to the public.

- **Click-through rate (CTR):** The number of clicks divided by impressions.
- **Average engagement:** Total engagement divided by impressions. Likes, comments, and shares are examples of social activities that may be included in an engagement.

If you are looking to increase the number of signups, downloads, or purchases, you will want to know how many individuals are really completing these actions. Metrics to focus on:

- **Conversions:** Estimated number of times your ad was clicked or seen by a user before they took action. This measure is only applicable to campaigns that monitor LinkedIn conversions.
- **Conversion rate:** It is how many times your adverts are converting visitors to customers.
- **Cost per Conversion:** The amount spent on advertising divided by the number of leads generated.
- **Leads:** Your ad campaign's lead generation LinkedIn Lead Gen Form campaigns are eligible for this measure.
- **Impressions analyzed** Total analysis of **Invalid Traffic (IVT)** filtered impressions.
- **Valid and viewable rate:** According to the *Media Rating Council* standard, the proportion of legitimate impressions that might be seen.

[Setting up tracking](#)

You can set up tracking for conversions and lead generation forms. With these tools, it is easier to track lead generation numbers at the bottom of the funnel.

Set up the conversion tracking system to monitor:

- Conversions
- Conversion rate
- Cost per conversion

[Figure 6.14](#) shows the conversion tracking software as an example:

Field	Clicks	Calls	Forms	Leads	Sales	Revenue
Google Paid	56,988	552	5634	6186 (10.85%)	72 (116%)	£499,428.13
Direct	15,447	218	3277	3495 (22.63%)	49 (140%)	£360,350.31
Google Natural	10,096	150	2126	2276 (22.54%)	19 (0.83%)	£103,486.38
Bing Paid	6,498	38	1145	1183 (18.21%)	5 (0.42%)	£48,115.48
Offline	363	541	0	541 (149.04%)	158 (29.21%)	£1,227,467.01

Figure 6.14: Conversion tracking software as an example¹⁷

Use lead generation forms to keep tabs on your progress by monitoring the following:

- Leads
- Cost per lead

Evaluating ad performance

As a campaign manager, you may access and also download campaign data and reports. Make sure you are measuring the things that matter most for the success of your campaign. For evaluating the performance of your ad, you should measure customer engagement. It can be measured as the number of engagements per impression and the number of clicks per impression.

Customer engagement = Number of engagements¹⁸/Number of impressions

Optimizing with demographic insights

LinkedIn's demographic information for professionals may be used to find existing and also target new consumers.

Begin by looking at who is most interested in your adverts. Sort according to your most important stats.

Conclusion

LinkedIn as a marketing tool is advantageous. LinkedIn is the most popular professional social media site. LinkedIn's advanced targeting options allow you to offer your content and adverts to users who are more likely to act and generate high-quality leads. The way each ad interaction is counted toward conversion in various campaigns may be customized when setting up the conversions.

There are a number of ways that lead from integration partners may make it simpler for you to manage your pipeline and communications. LinkedIn partners could also assist you in attracting and nurturing the proper audience.

Using LinkedIn analytics can help you determine ROI and achieve your social media objectives. The following are the three most prevalent aims of marketing campaigns: boost your brand's visibility (the upper funnel), consideration and involvement (mid-funnel) and increase sales (the bottom funnel). If you are looking to increase the number of signups, downloads, or purchases, you will want to know how many individuals are really completing these actions. Metrics to focus on include: total analysis of **Invalid Traffic (IVT)** filtered impressions.

In the upcoming chapter, we will learn about the basics of Twitter marketing and will be able to frame a Twitter advertising campaign.

Key terms

- **LinkedIn**: Professional networking tool.
- **LinkedIn business profile**: Public face of a company on social media.
- **Lead generation**: Activities and techniques performed in the pursuit of new consumers.
- **Hyper targeting**: Marketing strategy in which exceptionally relevant content is delivered to the identified target audience.
- **Retargeting**: Campaign that prompts your potential customer once they leave your website without purchasing anything.

Questions

1. How can LinkedIn be used for marketing?
2. What are some great LinkedIn content marketing strategies?
3. How one can generate leads through LinkedIn?

4. What type of customers and products are focused in LinkedIn marketing?
5. How do you set LinkedIn campaign expectations?

Class Exercise

1. Create a LinkedIn marketing strategy for a startup.
2. Design the content for a LinkedIn business profile for a brand of your choice.

CHAPTER 7

Twitter Marketing

Introduction

This chapter introduces a powerful social media marketing tool—Twitter. This platform is an appropriate place for sharing news about the product, promoting the brand and reading third-party opinions such as the opinion of an industry influencer. Twitter can be used by marketers for increasing awareness of their brand. This chapter compares Twitter with other social media marketing platforms and helps the reader in framing a content strategy for building a relationship with the target audience.

Structure

In this chapter, you will learn about the following topics:

- Introduction to Twitter marketing
- Twitter marketing is unique
- Framing content strategy
- Twitter ads
- Twitter advertising campaign

Objectives

After reading this chapter, the reader will be able to understand the importance of Twitter as a powerful social media marketing tool. The reader will also learn about different types of ads one can post on Twitter. This chapter will also help in designing an advertising campaign for promoting a brand.

Introduction to Twitter marketing

Twitter marketing is the concept or technique that entails spending time and resources to develop a campaign that will increase your company's visibility, audience participation, and revenue. Brands which target politics, blue-collar work, media, or B2B sales may find it particularly beneficial. Because it does not cost anything to have a presence on Twitter, you can advertise your product organically, share relevant content, and provide assistance and customer service. Twitter also offers the chance to broaden your reach and find conversations that really are taking place across your brand. It is an ideal marketing platform for many businesses. The graph in [figure 7.1](#) illustrates the growth in the number of Twitter users:

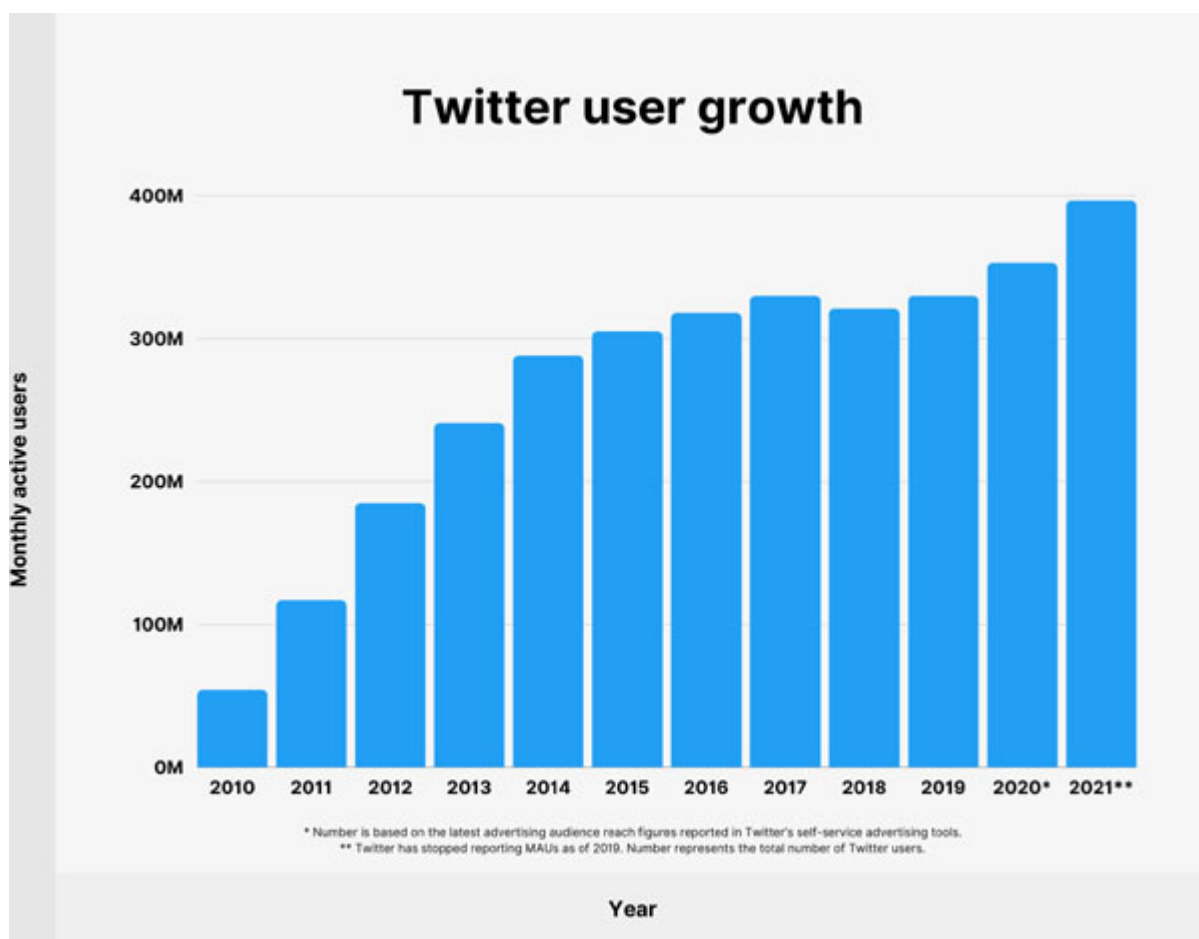

Figure 7.1: Increased Twitter users over the year¹

If you are willing to put in the time and effort, this free exposure may be an exceptionally potent marketing tool for the company.

Twitter should be a part of your marketing strategy as more than 145 million uses it daily. It is the fifth most popular social media network that

you can use for building your brand and driving sales². Twitter is an all-in-one solution for spreading awareness of your brand, for promoting your products or services and for communicating with your potential customers. Twitter has become a necessity for your brand as over 500 million tweets are shared per day, and most of the users follow their favorite brand and are always interested in buying something new. [Figure 7.2](#) illustrates the importance of Twitter as a digital marketing tool for your brand:

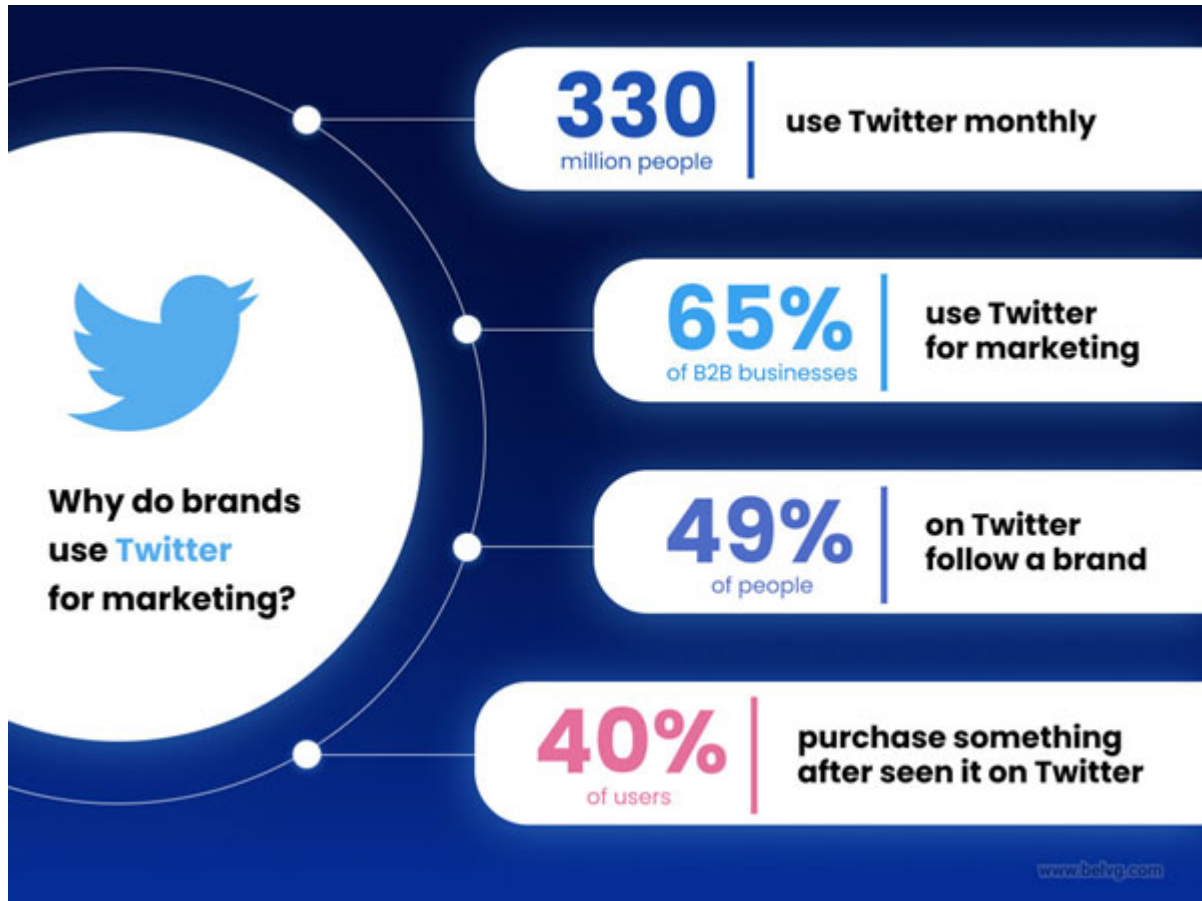

Figure 7.2: Importance of Twitter marketing³

Twitter marketing is unique

Twitter is a superior form of social media because it facilitates the rapid spread of viral news stories. Twitter is supported on nearly every device and platform. As Twitter is also accessible as a mobile app, one may quickly get in contact at any time and from any location.

Twitter is a social media platform that allows businesses and consumers to interact and exchange information in real-time through a variety of feeds. All of these exercises may be done on their own or in conjunction with each other. It is possible for them to communicate with one another if they do not know each other. Twitter's most enticing feature is its ability to be integrated with a variety of other social media platforms, email clients, and Web-based services. It has a greater ability to draw visitors and is much more useful while providing customer service. Using Twitter, businesses and consumers may freely engage in direct dialogue through the service and also locate and offer the best solution for any issue or service. Take a look at how it is superior to other well-known social networking platforms:[4.5](#)

- Twitter is more open and asymmetric than Facebook. As a result, Twitter has become more lucrative, famous, and useful for businesses.
- Inexperienced marketers might develop a connection with clients by using Twitter. Unlike LinkedIn, where it is recommended to accept an invitation from people you know, this is an excellent place to meet strangers who share your interests and hobbies. Despite the fact that LinkedIn is a business-oriented social network, Twitter is a valuable tool for establishing professional connections.
- On the other hand, Instagram is mostly used for sharing photos and videos and is geared at having fun and promoting a product or service. The option to retweet and to include a link in the post on Twitter helps increase traffic to the website or blog; this is not possible on Instagram.
- When it comes to blogging platforms, Twitter and Tumblr are both excellent options. However, Twitter seems to be more likely to be used for short-form content, such as tweets, whereas Tumblr seems to be more likely to be used for long-form content like photos. A photo or other material submitted by one person may easily be tracked and published by many others, which results in a lot of the same content being shared over and over again.
- Twitter has a broader audience base as compared to TikTok or Snapchat.

Framing content strategy

When you are always coming up with new methods to connect with the audience, it might seem like you have exhausted your creative resources. Although long-term social success is crucial, establishing tactics in order to audience engagement and return for more is essential. Use these content methods to build a relationship with clients over the long term by stimulating dialogue and narrating a tale.⁶

Creating mini-campaigns from long-form content

Miniature campaigns may be created using e-books, whitepapers, and original research. For instance, create a short ad that includes several data points, inspirational remarks and intelligent analytic soundbites from the presentation or infographics. Incorporate a link to an extended version of the asset. As a result, you will be able to share useful information with your audience and increase traffic to your site. [*Figure 7.3*](#) shows a mini-campaign run by Deloitte:

Figure 7.3: An example of mini-campaign⁷

Using Twitter Polls and ask questions

Encourage your audience to express their thoughts, ideas and opinions by making it easy for them to do so. Consider using Twitter Polls instead of posing an open-ended query. The best way for your audience to participate is to ask them questions that are relevant to them. To pique the attention of those who could be interested in your tweet, provide a series of provocative questions. Retweet or share the most fascinating responses with your followers. [Figure 7.4](#) shows an example of using Twitter Polls:

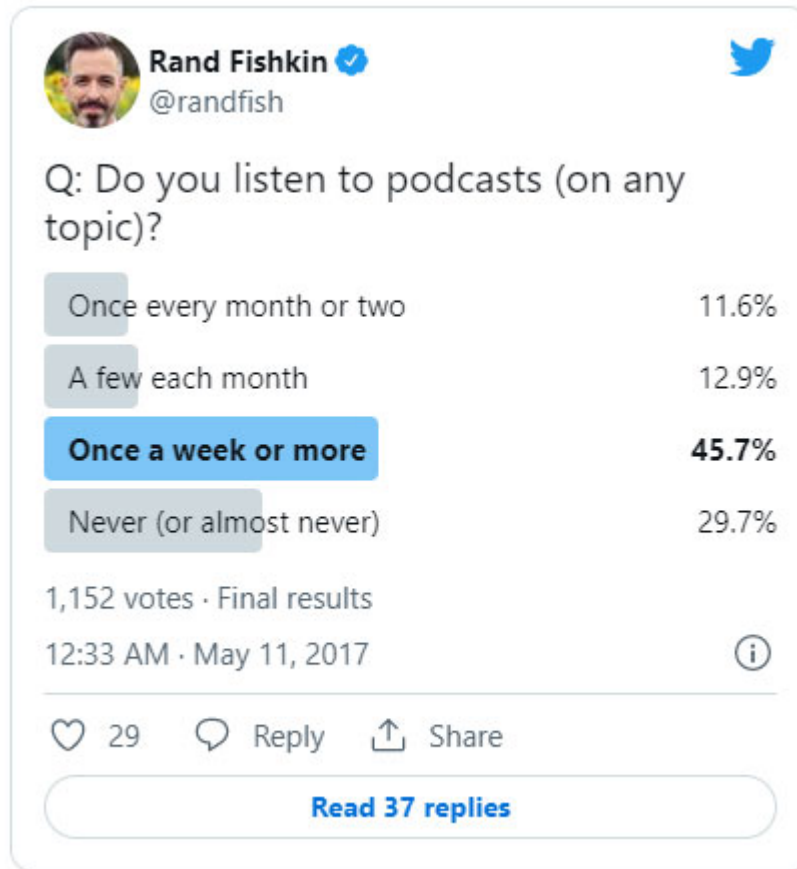

Figure 7.4: An example of Twitter Polls having question⁸

Go cross-channel by mining other content

Twitter is a timeline of your brand's story; therefore, use it as such. Use social media to spread the word about your company's latest news, industry events and research, including customer success stories. It is possible to reuse material you have already created for other platforms and target Twitter audiences specifically. Audiences that follow the brand will find it engaging when you blend together recent events with classic themes.

Including visual assets in your tweets

Tweets that incorporate visual information are three times more likely to be retweeted and liked. Audiences nowadays are starved for visual stimulation. Tweets may include multimedia, such as video, photos, and GIFs. When consumers are reading through their feeds, visual material grabs their

attention and motivates them to stay on the page longer. [Figure 7.5](#) illustrates the use of visual assets in your tweets:

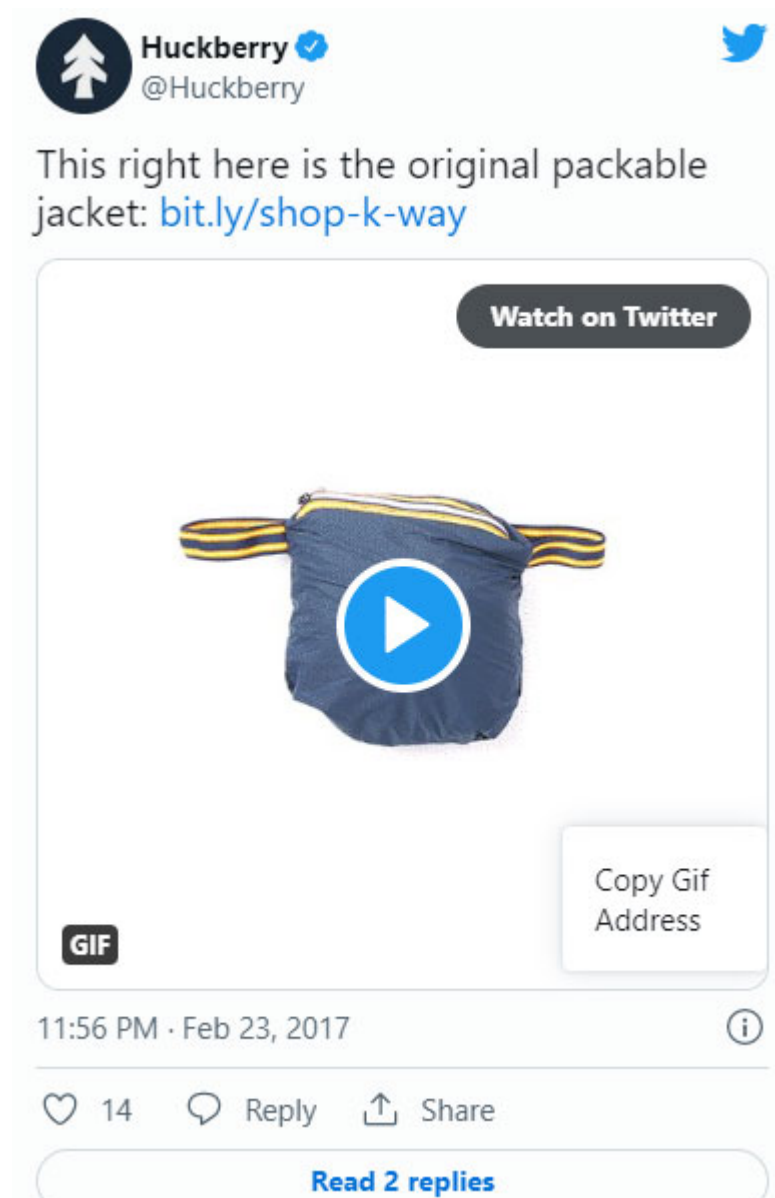

Figure 7.5: An example having visual asset in twitter⁹

Developing a themed content series

Develop the series of tweets which are linked together by a similar topic, so that you may create fresh material for it over time. As an example, consider the following:

- Putting your consumers in the spotlight

- Educating your audience on some interesting facts regarding your field
- It's important to identify and recognize the leaders in your field
- Introducing new staff members
- Assisting visitors to your website with short tutorials
- Providing historical context for your goods or services by highlighting notable events in your industry's past

Making it easy to track content with hashtags

Whether you are writing about a specific event or creating a series on influential people in your field, using a hashtag will help your readers stay on top of the topic. Using the campaign hashtag may assist draw attention to the remainder of the narrative by connecting all the relevant information. For the debut of the teaser, Amazon Prime Video India started a campaign announcing their original program, *#TheFamilyMan* ([Figure 7.6](#)). The buzz was generated by using the two product propositions. The principal actor, Manoj Bajpayee, tweeted a link to the show trailer and everyone who retweeted it was allowed to see it before it was released. The main character, who played both a family guy as well as a spy, was the inspiration for a special emoji. When the Twitter app was set to Dark Mode, unique emoji showed the character's second personality.

More than 17,000 people signed up to be notified when the trailer was released after the campaign garnered 1.3 million views and 17,000 signups.^{[10](#)}

Figure 7.6: Twitter content with hashtags¹¹

Curating compelling content

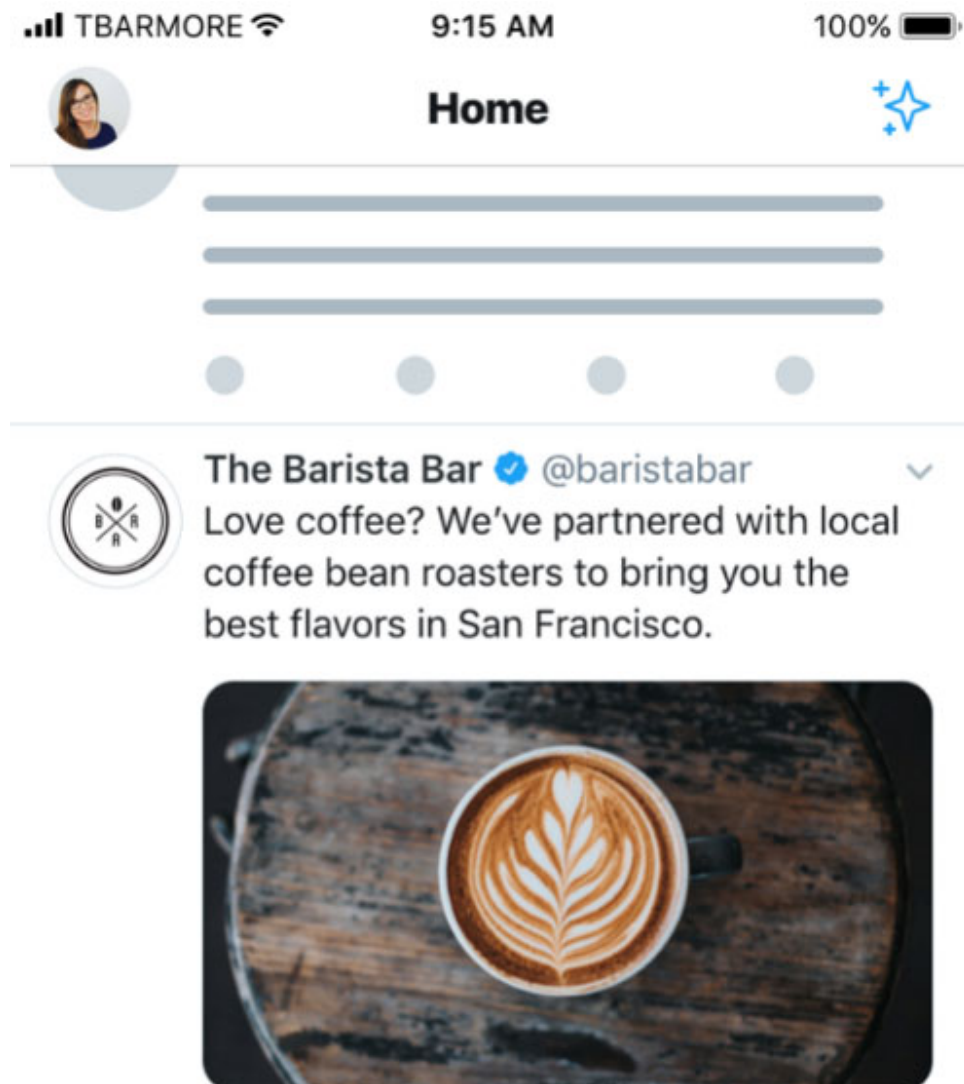

Consider how curated material might help you discover new stories. Is there anybody in particular that you keep up with? No matter who you work with, do they provide compelling content? Keep an eye out for ways to promote user-generated content. When you share other people's material, you foster new connections and open your audience up to new ideas.

Twitter ads

Twitter offers a number of ad formats marketers can use to engage their potential customers. Using three or more ad formats increases campaign awareness by 20% and purchase intent by 7% on Twitter.¹² You can use any of the following ad formats given for showcasing the content to your audience:

Single image ads

This is the most common ad format you can use on Twitter as it is very easy and fast to design. This format of the ad contains an image below a few lines of text. Twitter's single image ads can also have a **Call To Action (CTA)** button. [Figure 7.7](#) shows an example of single image ads on Twitter:

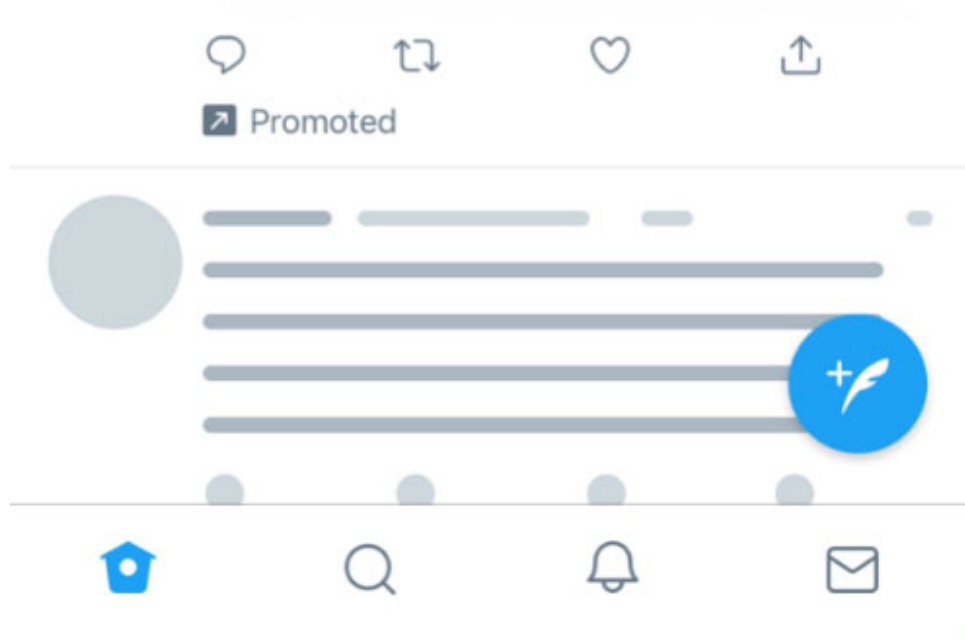

Figure 7.7: Single image ad on Twitter¹³

Video ads

Twitter offers a video ad format for visually driven digital world. This format is a popular method for tapping into the power of your influential audience. [Figure 7.8](#) shows a video ad on Twitter:

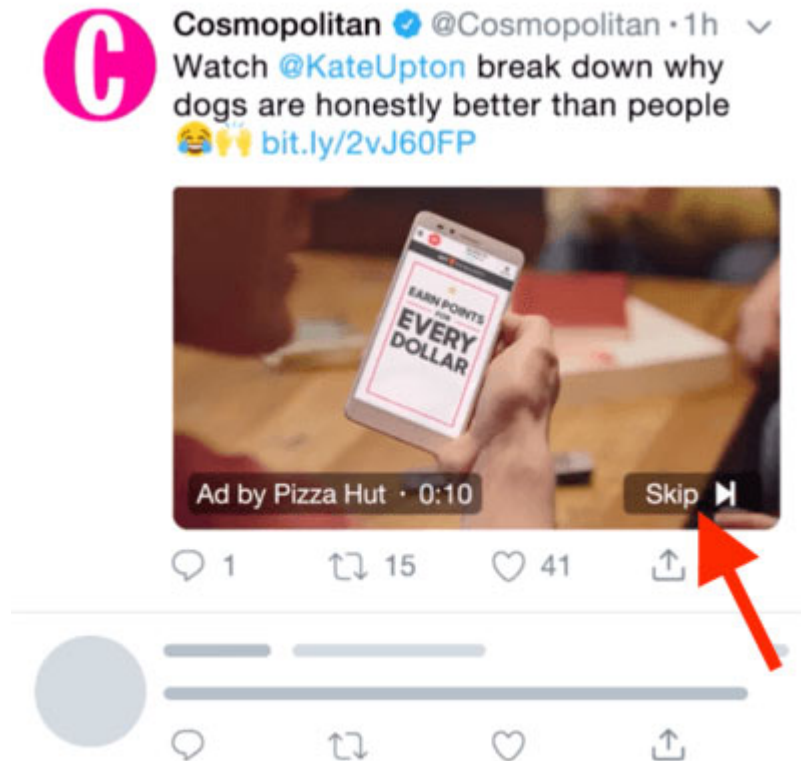

Figure 7.8: Video ad on Twitter¹⁴

You can have a long video of 10 minutes duration as ad, but it is recommended by Twitter to keep your ad videos of 15 seconds or less. Videos of duration less than or equal to 60 seconds will loop. Text overlays and captions are mandatory for this ad format. You can use either a pre-recorded or a live video for promoting your product on Twitter.

Carousel ads

Carousel ads are also known as *multi-Image ads*. You can create this type of ad by using multiple (up to six) images or videos. Twitter carousel ad format allows you to integrate public tweets with your own tweets. However, this format can be used by any business but is more suitable for brands related to beauty, apparel and fitness. [Figure 7.9](#) shows a screenshot of a multi-image ad on Twitter:

[Book](#)

 [45](#)

 [92](#)

 [1,349](#)

Figure 7.9: Carousel ad on Twitter

This ad format helps you in reaching new audiences and driving them to your website or app. Carousel ads provide an opportunity for marketers for showcasing multiple products, delivering the right message and narrating the brand story to their potential customers. The edge-to-edge design of this type of ad allows the user to easily transit across cards.

Moment ads

Moments on Twitter allow you to narrate a brand story to your audience that goes beyond one tweet. This ad format is used for highlighting different perspectives by creating a moment of notable tweets. You can create a specific thread of content by curating multiple tweets into a single Moment. For example, to add credibility to the brand, you can feature user-generated content. [Figure 7.10](#) shows a Moment ad on Twitter:

Figure 7.10: Moment ad on Twitter¹⁵

You can use this ad format for engaging more audiences. For creating a moment ad, you can collect and combine any type of content such as text, photos, videos, hashtags, quoted tweets, emojis, and many more.

Follower ads

Followers' campaigns build an engaged audience to amplify your message—on and off Twitter. People who follow you not only see your tweets, they are likely to become brand advocates and customers. Follower campaign

impressions are displayed in multiple locations across the Twitter platform, including home timelines, who to follow, and search results. They are automatically distributed across these locations to users who fit the targeting you have specified in the campaign setup.¹⁶ [Figure 7.11](#) shows a follower ad format:

Figure 7.11: Twitter follower ad¹⁷

This ad format helps in attracting more followers by capturing users' interest. Twitter follower ad format features a **follow** CTA button right below the image.

Amplify pre-roll ads

This ad format is a method to monetize your videos on Twitter. Amplify pre-roll ads are the same as Facebook's instream ads. Your 15-second advertisement video will appear before long-duration videos published by other users. [Figure 7.12](#) shows an amplified pre-roll ad on Twitter.

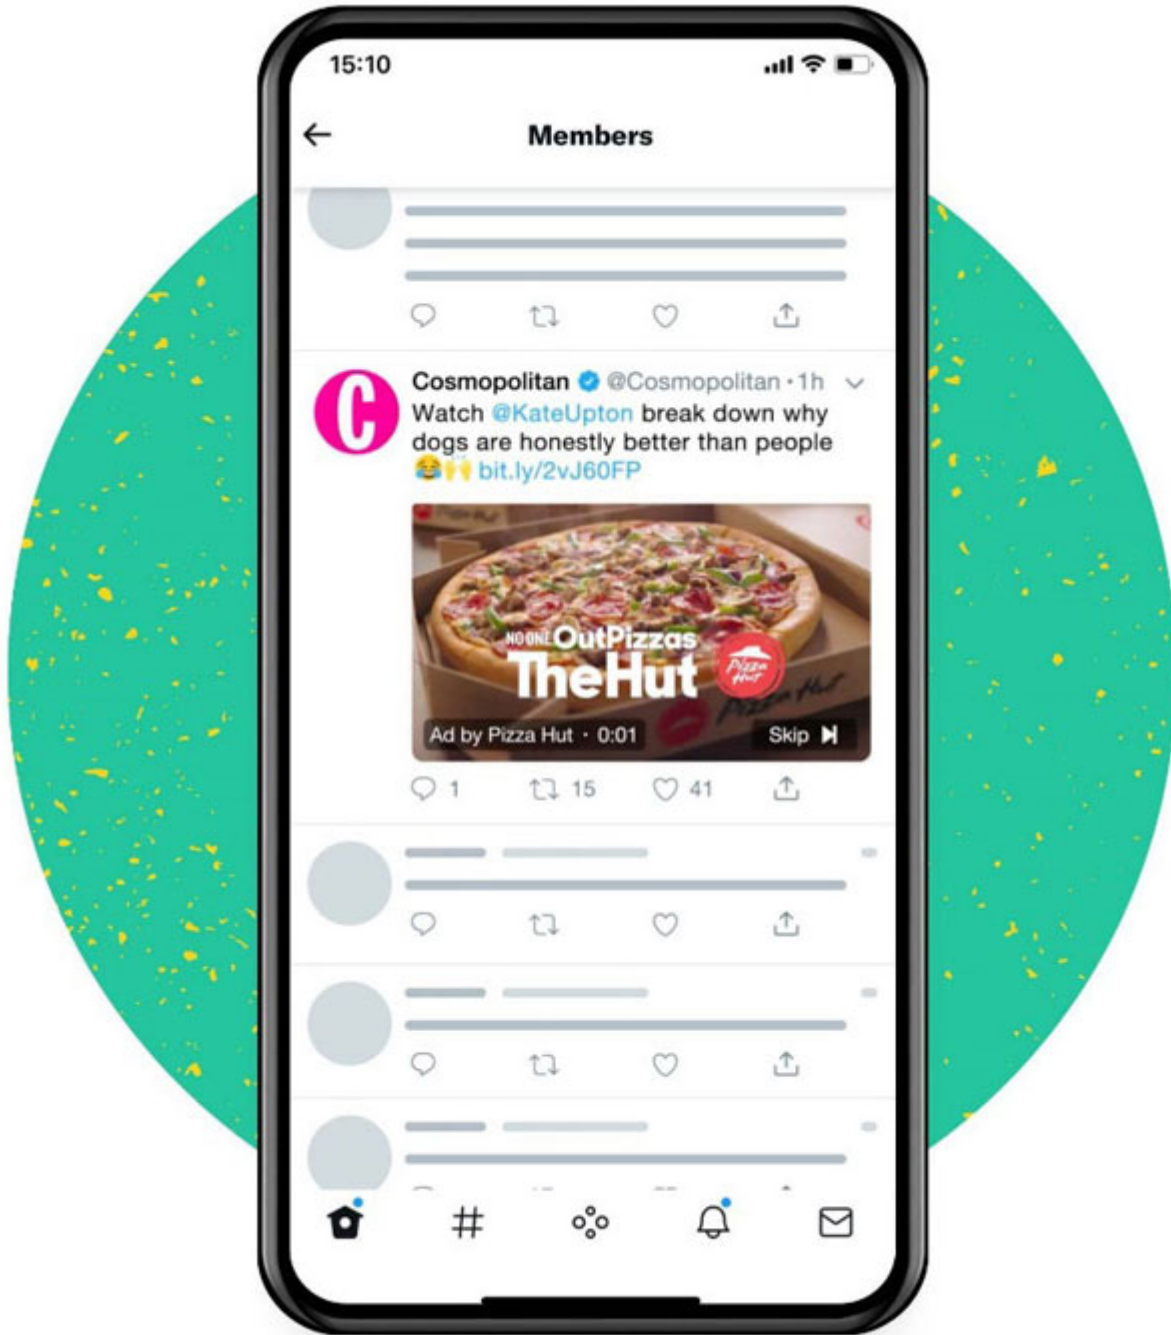

Figure 7.12: Twitter amplify ad¹⁸

Takeover ads

Marketers can do timeline takeover by using this ad format. Timeline takeover means that your ad will be at the top of the organic timeline and will be displayed as the first ad of the day as soon as the user opens Twitter

for the first time in a day. The goal of this type of ad is to maximize visibility by featuring images and videos on top of the conversation. [Figure 7.13](#) shows an example of takeover ads on Twitter:

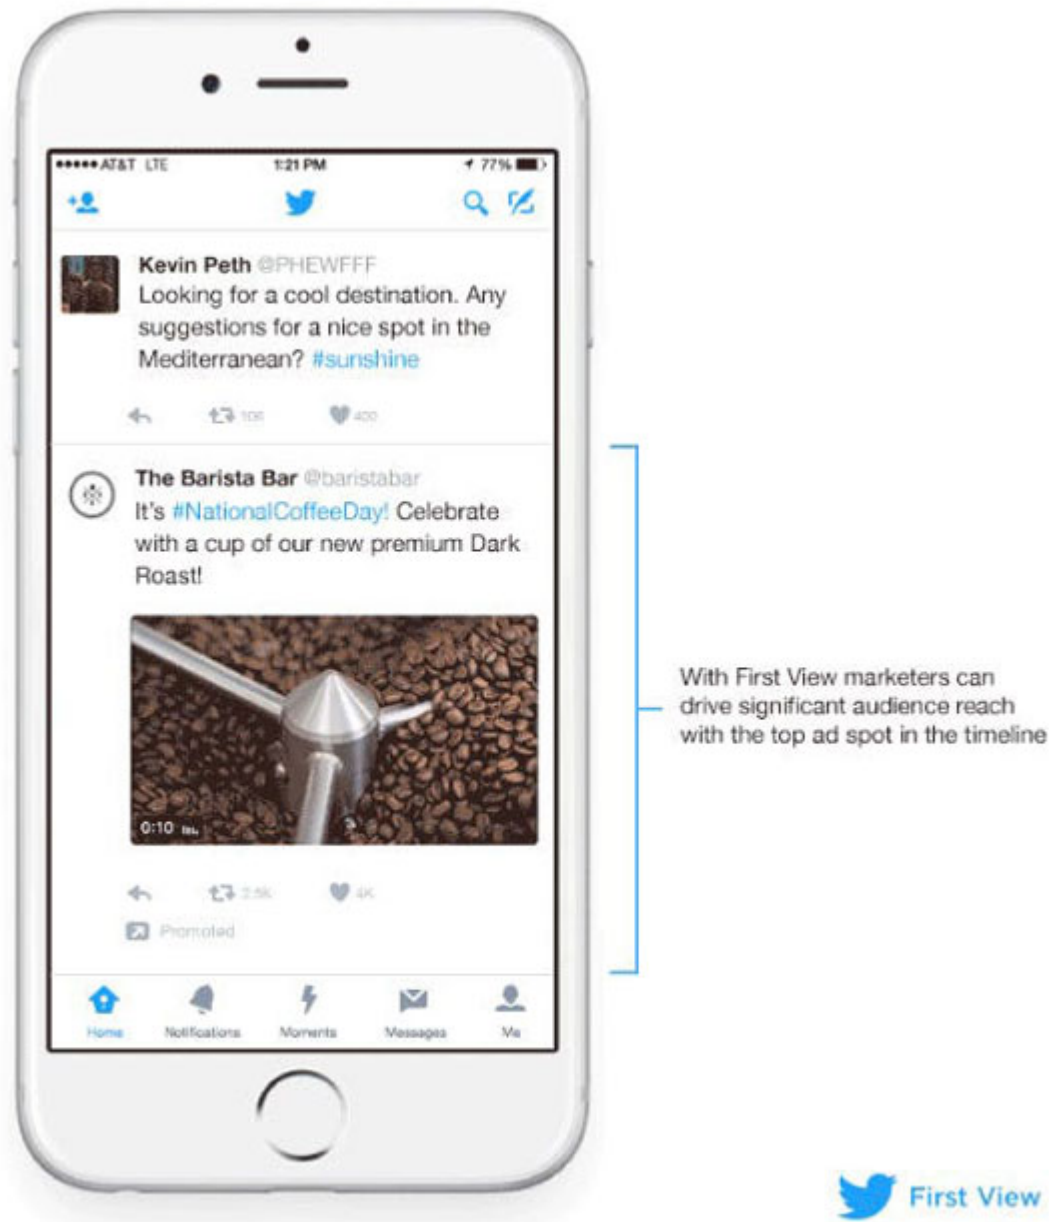

Figure 7.13: Twitter takeover ad¹⁹

Twitter advertising campaign

You may see quick effects from a well-executed campaign. As a result of Twitter's relative obscurity as an advertising medium, strong **Clickthrough Rates (CTRs)** are easy to come by and remain stable over time. The reach but also effect of Twitter ads is much greater than that of any other kind of content on the site.[20](#)

In addition, Twitter advertising provides a great user experience. Ads are incorporated into user's timeline but are only separated from organic postings by *sponsored* tag. The platform is entirely optimized for mobile devices.

With Twitter Ads, businesses may reach their objectives much more quickly than with conventional kinds of advertising. Twitter, even so, is about the here and now.

Awareness campaigns

- **Reach:** Targeting a large number of potential customers while keeping an eye on the cost per impression is indeed the goal of Twitter ad optimization. Besides that, there are not any limitations on how you may achieve this goal. Recognition, consideration, and conversion are three types of Twitter ad marketing goals. You should make a decision between these options when developing your platform strategy based on what your ultimate goals are.

Consideration campaigns

- **Video views:** Increase the number of people who watch your videos on Twitter (cost per view). Due to the fact that Twitter users like discovering new things and videos are a simple format to do so. Tweets that include videos are most likely to be spread than those without.
- **Pre-roll:** Get paid for each time a viewer watches your ad by tying it to high-quality video content. It enhances the value of the brand and connects it with the interests of the customer. Increasing your brand's worth is a top priority.
- **App downloads:** Since users may download an app immediately from the timeline of the Twitter account that is mobile-optimized, adverts

with this goal get excellent results.

- **Web clicks:** Boost your website's traffic and sales. It encourages people to visit your site and/or do a certain activity.
- **Interactions:** Boost the number of people who engage with your tweets and pay for each interaction you have. Organic postings may be promoted, or you can build special tweets for promotion.
- **Followers:** The more people you can reach, the more powerful your brand message will be. Having more followers opens up additional avenues for sharing information, making purchases and spreading the word about their excellent experiences. In this instance, you get charged for each new follower that you acquire.

Conversion campaigns

- **Reinteractions with the app:** Your app's users are the target audience for these messages. You are charged for each time a download is made.
- **Generating website tag:** To measure conversions, create a few website tags in your Twitter ads account and afterwards set them on the relevant landing pages of your campaigns to begin. It is possible to define custom attribution windows, examine the income your campaigns are bringing in, and observe which tweets or targeting criteria are generating the largest conversions.

Conclusion

Twitter is an ideal marketing platform for many businesses. Brands which target politics, blue-collar work, media, and B2B sales may find it particularly beneficial. It does not cost anything to have a presence on Twitter, advertise your product organically and share relevant content.

Twitter's most enticing feature is its ability to be integrated with a variety of other social media platforms, email clients, and Web-based services. It has a greater ability to draw visitors and is much more useful while providing customer service.

Twitter is a timeline of your brand's story; therefore, use it as such. Use social media to spread the word about your company's great news, industry

events and research. Include visual assets in your tweets that are three times more likely to be retweeted and liked.

Creating mini-campaigns from long-form content, using Twitter Polls and asking questions, approaching cross-channel by mining your other content and including visual assets in your content are good content strategies to be followed.

In the upcoming chapter, you will be able to learn about marketing using emerging social media platforms such as Instagram and Snapchat.

Key terms

- **Tumblr:** Microblogging and social networking website.
- **Miniature campaigns:** Short-term bursts of marketing communication. For example, starting a conversation on Twitter.
- **Cross Channel Marketing:** Connecting potential customers through different communication channels.
- **Hashtag:** # used before a keyword on social media (Twitter) for helping in the easy search.

Questions

1. Why is Twitter a good marketing tool?
2. What are some great Twitter content marketing strategies?
3. How one can generate leads through Twitter?
4. What type of customers and products are focused in Twitter marketing?
5. How do you set Twitter campaign expectations?

Class Exercise

1. Create a hashtag for your brand and find out the ways for making it trending for a day.
2. Identify three most popular Twitter ad campaigns.

CHAPTER 8

Emerging Platforms

Introduction

This chapter introduces the two emerging social media platforms, namely, Instagram and Snapchat, for marketing your products and services. This chapter is going to clear the doubts about using either Instagram or Snapchat or both for the promotion of brands online. This chapter further helps the reader in understanding the basics of Instagram marketing.

Structure

In this chapter, you will learn about the following topics:

- Instagram and Snapchat
- Difference between Instagram and Snapchat
- Digital marketing strategies through Instagram and Snapchat
- Instagram marketing

Objectives

After reading this chapter, the reader will be able to understand the emerging social media platforms—Instagram and Snapchat. The reader can differentiate between the two marketing tools and will be able to design a marketing strategy suitable for their businesses.

Information and communication technology has changed rapidly over the past 20 years, with a key development being the emergence of social media.

The rise of social media platforms means it is unusual to find an organization that does not reach its customers and prospects through one social media platform or another. Companies see the importance of using social media to connect with customers and build revenue.

Businesses have realized they can use social media to generate insights, stimulate demand, and create targeted product offerings. These functions are

important in traditional brick-and-mortar businesses and obviously in the world of e-commerce. Social media has greatly transformed the business landscape. It is one of the most important aspects of digital marketing, which provides incredible benefits that help reach millions of customers worldwide.¹

Instagram and Snapchat

Instagram and Snapchat are strikingly similar in several respects, yet they are also worlds apart. Two of the most popular social applications, Snapchat and Instagram, share a similar emphasis on picture sharing, which is why they are both so successful. To be the most popular social media network for sharing photographs and videos of your daily life. You can look at the increase in the number of Instagram followers in [figure 8.1](#) and the growth of Snapchat users in [figure 8.2](#):

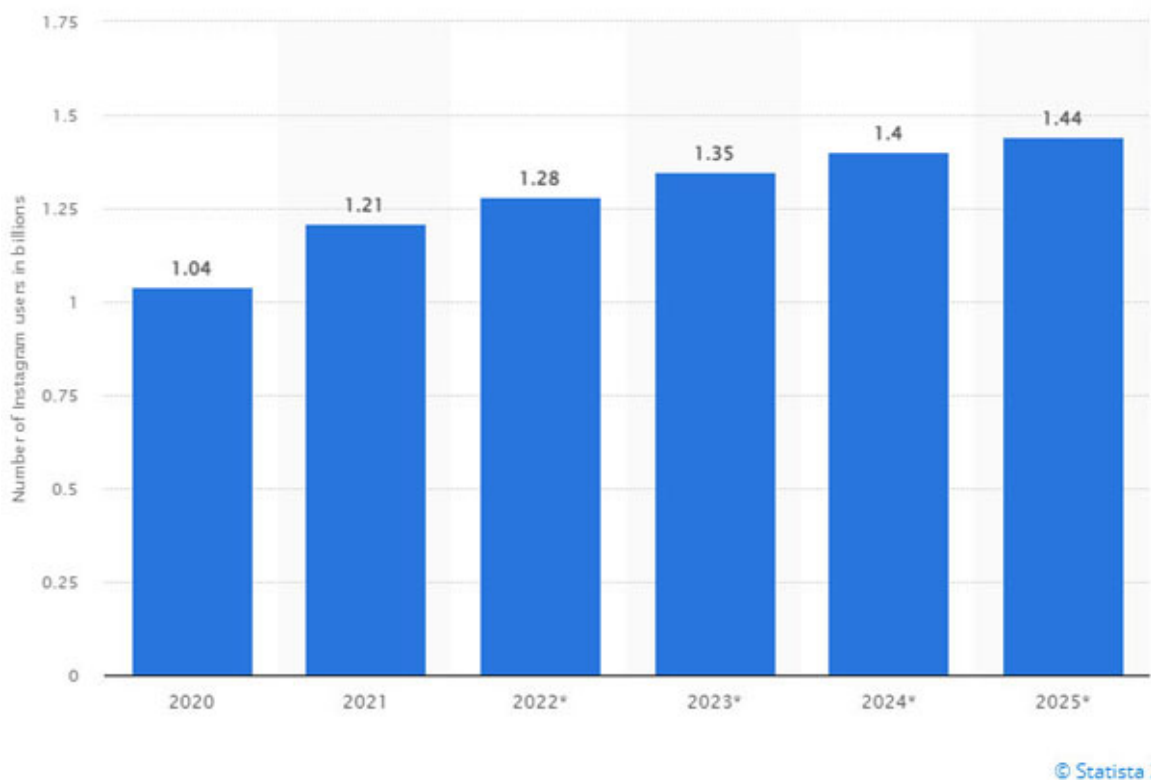

Figure 8.1: Increment in number of Instagram users over the year.²

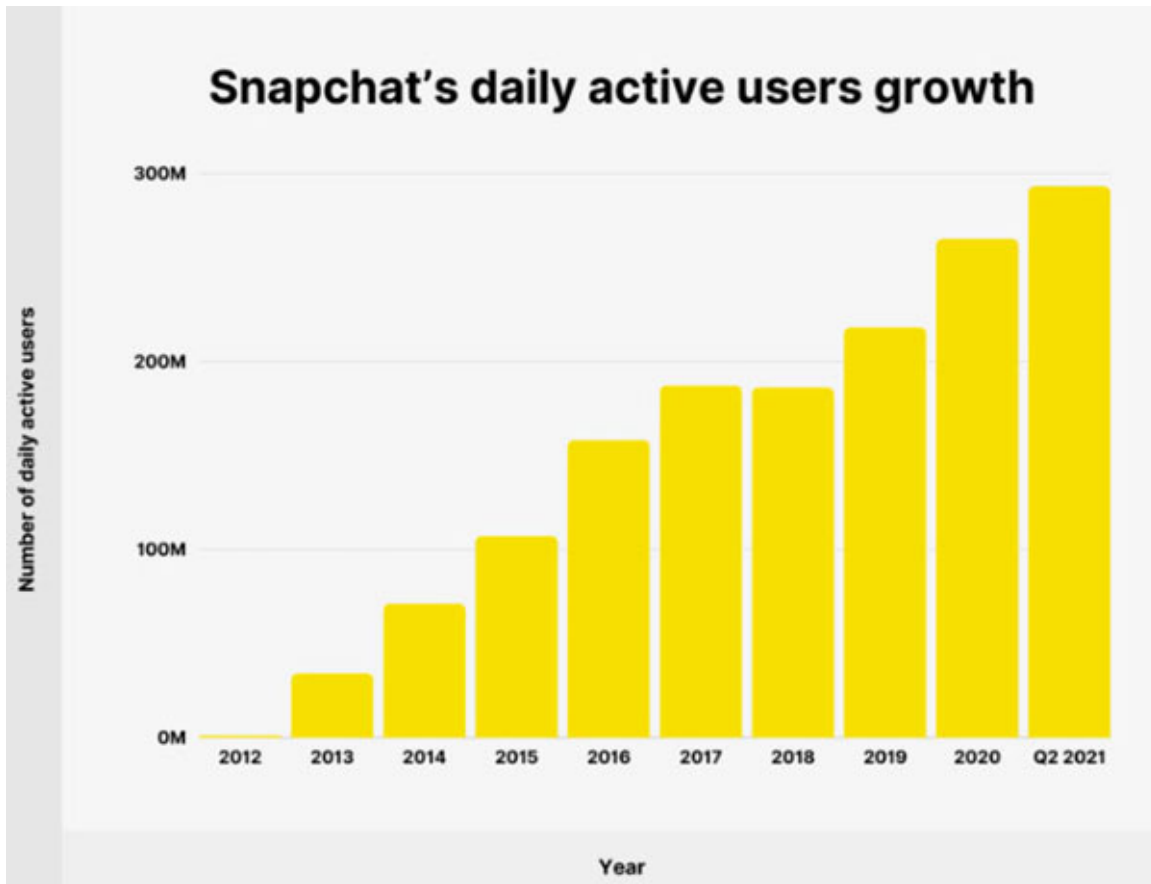

Figure 8.2: Increment in number of Snapchat users over the year³

Instagram and Snapchat both attract more than 680 million daily active users.⁴ This huge number of audiences makes both a great social media platform for marketing. Both of these platforms have a number of common features and advertising components, which makes it difficult for marketers to select such as one out of these two platforms depending on their own choice and requirements.

Difference between Snapchat and Instagram

Photos and videos are the focus of Instagram, which is a picture and video sharing app. Your amateur photos may be transformed into a work of beauty with the help of filters. Although Snapchat is also a picture and video sharing site, its methods of capturing and distributing images and videos are quite different from those of Instagram. There are certain differences between Snapchat and Instagram:

- **Disappearing photos**

It is possible to share photographs and videos with a chosen group of people or the whole globe through Snapchat and Instagram. Both have these functions, but Snapchat adds a unique twist by allowing users to share photographs that vanish after a short period of time. For a brief period of time, photographs and texts emerge before vanishing again. Snapchat's "*live in the present*" philosophy is reflected in the notion of vanishing photographs and videos.

- **Stories feed**

Viewers may see a horizontal scroll of content from various people at the very top of their main feed. Users you follow on Instagram have their profile images shown as cyclical bubbles. Also, you can touch or slide the screen to go to the next photo or video inside the feed. This is illustrated in [figure 8.3](#):

Figure 8.3: Stories feed on Instagram⁵

From a camera screen, slide right to access the Snapchat stories menu. Like Instagram, however, the videos are deleted as quickly as they finish on this app. [Figure 8.4](#) shows what the stories on Snapchat look like:

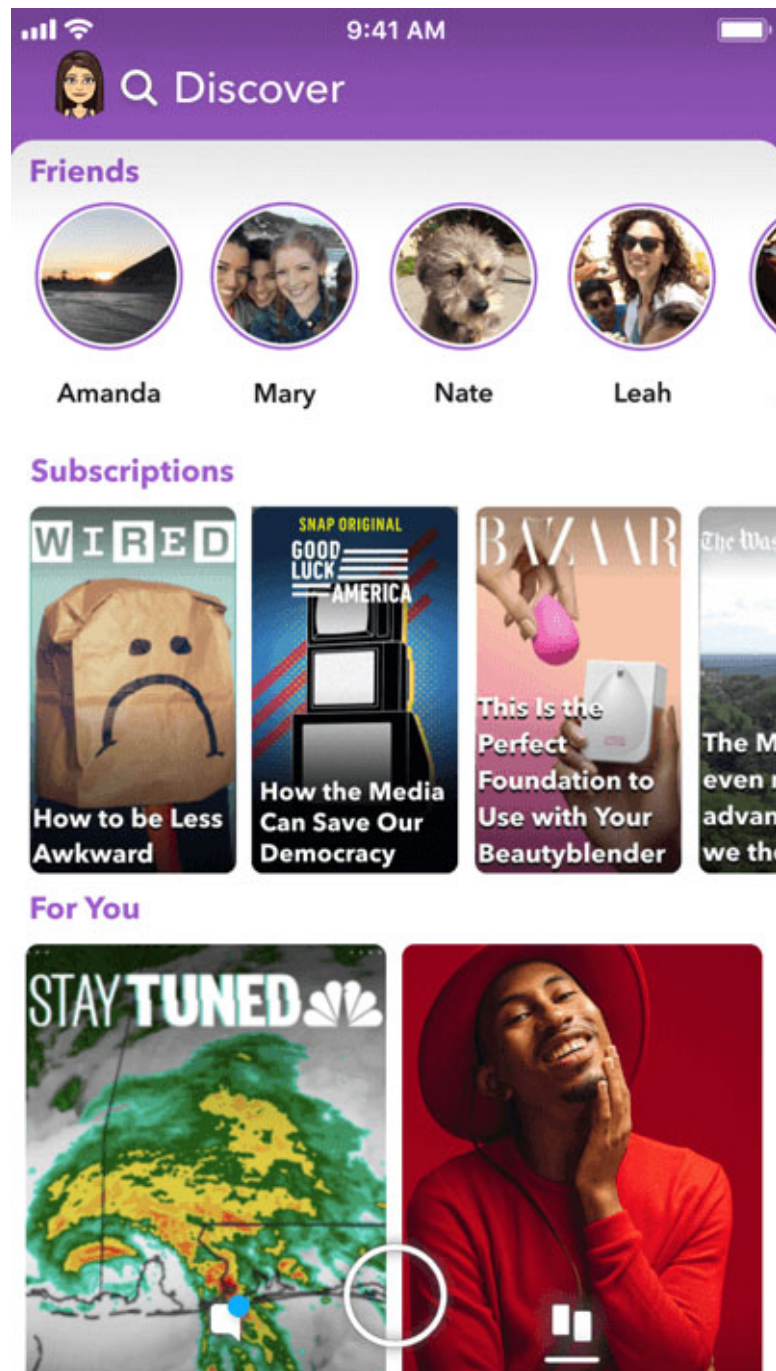

Figure 8.4: Stories feed over Snapchat⁶

- **Privacy of Snapchat and Instagram**

It does not matter whether you follow a certain person or not; Instagram stories are visible to everyone if your account is public. Even if you do not follow someone on Instagram, you may still see their stories. New “Story Settings” will enable you to conceal your tales from certain

individuals or allow them to be visible just to people you follow. You have complete control over who sees your stories on Snapchat.

We can compare Instagram and Snapchat on the basis of the following parameters:

- **Number of users:**

Instagram has a total of over 500 million⁷ users, whereas Snapchat has one-third the number of users of Instagram (187 million)⁸. These numbers suggest that if you wish to establish a new brand and increase the number of the target audience, you should use Instagram. Snapchat has younger demography than Instagram.

- **Filters:**

Snapchat is unique and unmatched when we compare filters with Instagram. Filters in snapchat are better and support a lot more choices as compared to Instagram. Snapchat is also unique when it comes to animation and offers augmented reality effects.

- **Stories:**

Instagram stories are designed such that the audience can transit from one story to another seamlessly, whereas the user is asked if he wants to see the next story or not in Snapchat stories. Instagram stories make sure that the user watches all of their followers' stories, which is an ideal situation for marketers. Instagram stories are stealing Snapchat users as they have a 28%⁹ higher view rate than Snapchat stories.

- **Advertisements:**

Advertisements on Instagram are proven to be more successful than on Snapchat. At least 30% of the users on Instagram have purchased a product they first saw on Instagram.¹⁰ The reason behind the success of Instagram ads is the availability of cheaper ad options and analytical tools for measuring the results.

- **Sponsorship campaign reach:**

Ads on Snapchat get 1.5 times more visual attention than that on Instagram¹¹. Snapchat is costlier than Instagram but has better reach and increases the purchase intent.

- **Discoverability:**

In terms of discoverability, Instagram is better than Snapchat. You have a public profile option on Instagram, whereas, on Snapchat, your profile

can be shared among the people who have added you. On Instagram, your potential customer can access your content even if they are not following you.

Instagram and snapchat both have common features, but Instagram may be a better option for businesses as it offers cheap advertising options and free analytics. Snapchat may be a good option for brands targeting teens and young adults.

Digital marketing strategies through Instagram and Snapchat marketing

There has been a constant battle between Snapchat and Instagram for as long as they have been competing.

Competition for customers is embedded into the fabric of the IT industry irrespective of if it is Facebook versus Google or Apple against Samsung, or Uber versus Lyft.

Instagram versus Snapchat is among the most recent examples of such clashes, especially when it comes to Stories and the attraction of each platform to influencers and brand advertising.

Entrepreneurs who want to expand their businesses and make influence their audiences are using such online forums. [*Figure 8.5*](#) shows the projected revenue of Instagram:

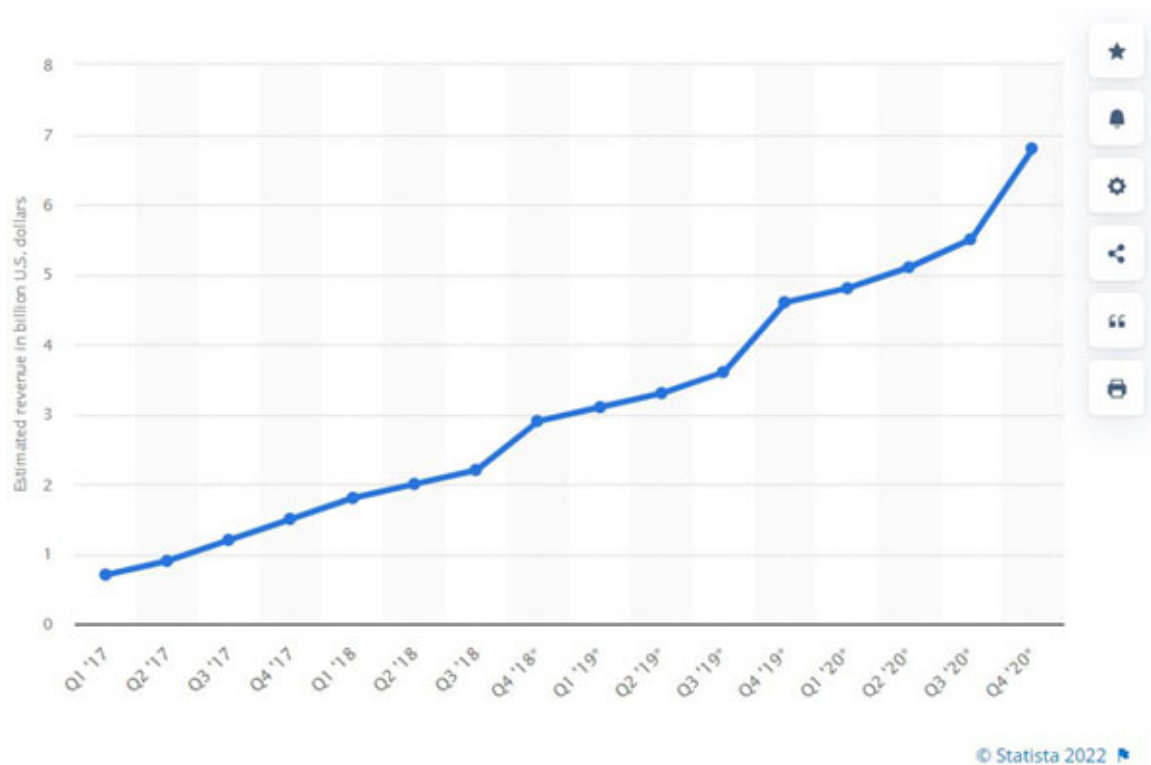

Figure 8.5: Projected revenue of Instagram from first quarter 2017 to fourth quarter 2020 [12](#)

The projected revenue of Snapchat from the first quarter of 2015 to the fourth quarter of 2021 can be seen in [figure 8.6](#):

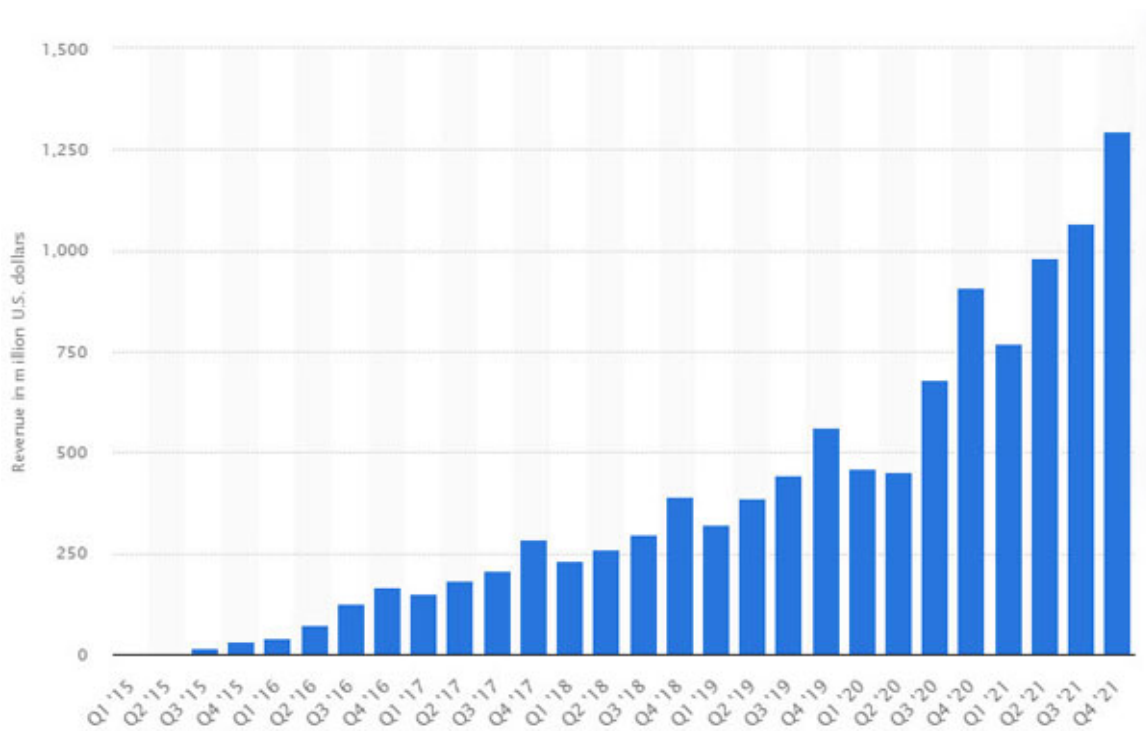

Figure 8.6: Projected revenue of Snap from first quarter 2015 to fourth quarter 2021¹³

For advancement, it is vital to know the finer points of each in order to come up with product marketing strategies.

By classifying Snapchat and Instagram based on the attributes that make them ideal for a faultless marketing campaign, Social Champ makes it easy for all struggling marketers out there.¹⁴

Story wars

Snapchat has dominated the short-form video-sharing space since its inception, whereas Instagram, more renowned for its picture-sharing complexities, has just recently entered the fray.

Instagram Stories was the company's response to Snapchat Stories, which had been available for many years prior to Instagram's introduction of its own version.

Clients were able to provide a presentation with a large number of images and audio.

Although it was a direct copy of Snapchat's Stories, Instagram quickly gained a foothold in the social media market. Please refer to the following screenshot:

Figure 8.7: An example of stories uploaded over Instagram and snapchat¹⁵

When a company is planning its internet marketing strategy and deciding how to allocate its budget, this phase is critical.

Brands, of course, do not want to spend money on “*dead*” phases of development. Even still, the engagement potential of Snapchat remains stronger.

Every day you must publish between one and five times to keep your material fresh in people’s minds.

Focal points and Geofilters

Snapchat’s face-adjustable Lenses and location-based Geofilters are major selling points.

There is a wide range of options for users who use other social networks. You can look at some of the Geofilters, as shown in [*figure 8.8*](#):

Figure 8.8: Geofilters¹⁶

Users like this product’s uniqueness and its functionality.

Snapchat’s ad filters allow advertisers to be creative with their messaging while also allowing users to personalize their experience on the app.

On the other hand, the sheer fact that anybody may use Instagram to post any photo means that it continues to attract a greater audience.

As a result, Instagram has become an excellent platform for brands to communicate via images that can serve as the centerpiece of their marketing efforts.

Target business audience

There is a legitimate debate going on among social media users over whether to use Snapchat or Instagram stories.

For the majority of social media users, it is a matter of personal preference or what your friends use the most.

When it comes to social media marketing, organizations and businesses need to be sure they are aligning their efforts with the overall strategy.

Instagram marketing

Instagram marketing is a branch of the social media marketing that you can use for promoting brands, enlarge sales, and improve engagements. This social media platform helps marketers in connecting with a large number of audiences and boost the sales of their brands. This photo-sharing app has seen tremendous growth over the past few years and is now appealing to marketers, advertisers and influencers. Instagram has more than 2 billion active users, and 64% of Instagrammers are under 34 years¹⁷. This young and enormous number of audiences attracts every type of business and brand for marketing on Instagram.

Marketing platforms require a well-designed strategy for achieving incredible results in their advertising campaigns. Let us explore what is possible with Instagram Ads.

- **Boost your posts with a tap**

If your brand is not getting enough engagement and reach, you should boost your post on Instagram. Boosting the post means that Instagram will show the post as a feed to all of your followers or some recommended list or target audience selected by you. The goal of this step is to advertise your business and reach your next customers with precise targeting and actionable insights. You need to have access to the Instagram professional account to boost your post. [*Figure 8.9*](#) shows how you can boost your post on Instagram:

Figure 8.9: How to boost a post on Instagram¹⁸

- **Select the right goal**

Take advantage of any one of the curated goals to create attractive Instagram ads. [Figure 8.10](#) shows the goals you can choose from on Instagram:

Cancel

@jindalstainless

☒

More website visits

☐

More messages

☐

Next

Figure 8.10: *Select a goal*

- **Inspire new audiences:**

Decide who matters the most to your business, then reach them with adjustable targeting options. If you are creating your own specific audience, then you have to name your audience and have to choose the location that you want to target. For example, if you are marketing for a cat grooming brand in Delhi, then your target audience should include all the cat lovers from Delhi. [*Figure 8.11*](#) shows how you can define your audience for your campaign:

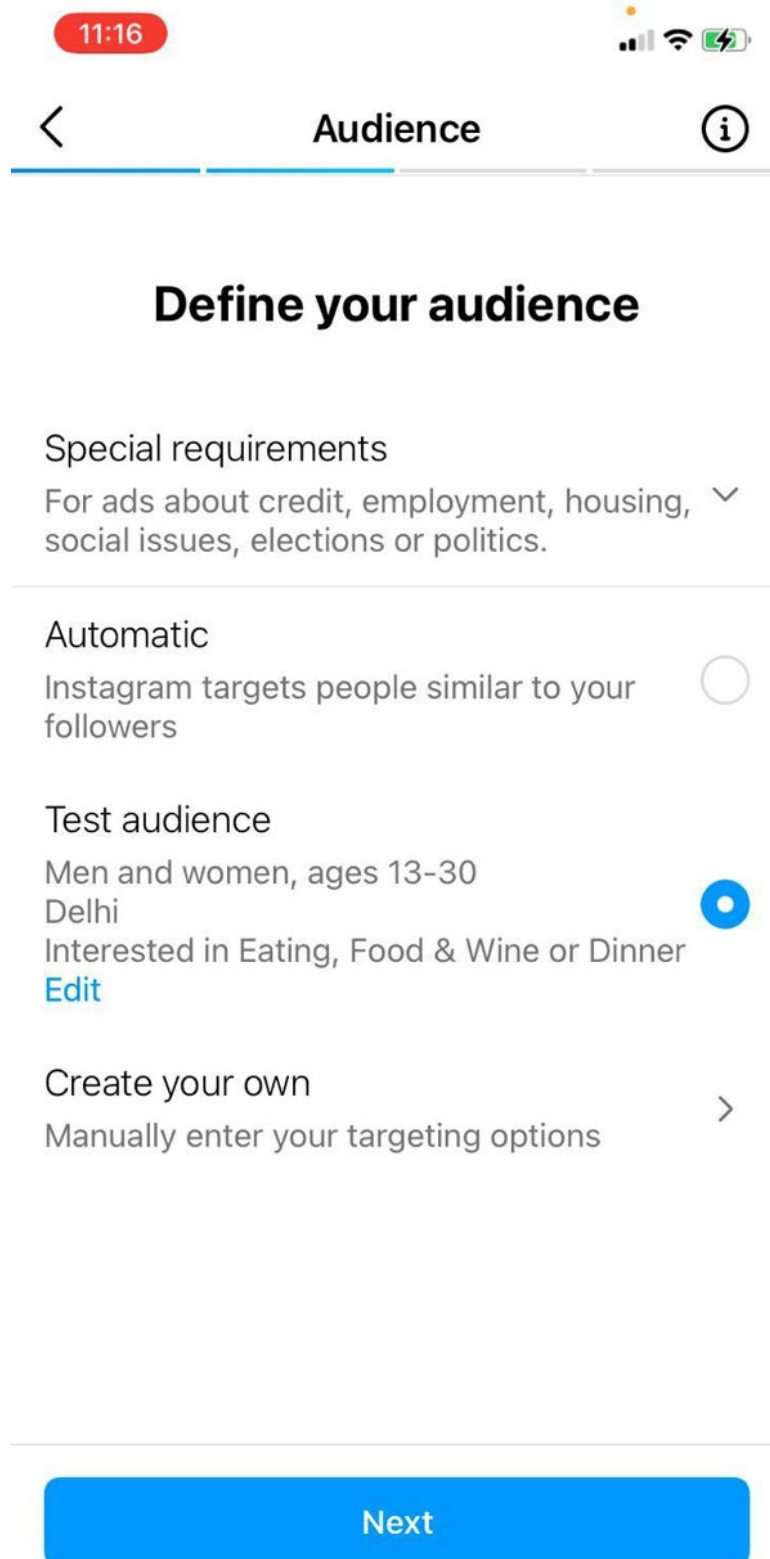

Figure 8.11: Define your audience

- **Set a budget that works:**

The cost of advertising is up to you. It depends on the duration of the ad and the amount you wish to spend. Select a budget that fits your business goals and update it at any time. Instagram will automatically estimate the expected reach. [*Figure 8.12*](#) helps you in selecting the budget and duration of your campaign:

Estimated reach

Next

Figure 8.12: Budget and duration of the campaign

- **Review and publish the Ad**

In this step, the ad designed by you will be submitted for review. Your ad will go live once it is approved by Instagram. [*Figure 8.13*](#) is a screenshot showing the review on your ad screen on Instagram:

Conclusion

The rise of social media platforms means it is unusual to find an organization that does not reach its customers and prospects through one social media platform or another. Companies see the importance of using social media to connect with customers and build revenue.

Snapchat and Instagram are two of the most popular social applications. They are strikingly similar in several respects, yet worlds different. Snapchat allows users to share photographs that vanish after a short period of time. Users on Instagram have their profile images shown as cyclical bubbles, and also, you can touch the screen to go to the next photo or video inside the feed. There has been a constant battle between Snapchat and Instagram for as long as they have been competing.

New “*Story Settings*” will enable you to conceal your tales from certain individuals or allow them to be visible just to people you follow. You have complete control over who sees your stories on Snapchat. Instagram Stories was the company’s response to Snapchat Stories. Instagram Stories quickly gained a foothold in the social media market.

In the upcoming chapter, we will explain marketing on the go, i.e., mobile marketing. The reader will be able to design a strategy for promoting brands on mobile devices.

Key terms

- **Stories:** Content that disappears in a short span of time (24 hours)
- **Feed:** Ideal for reaching new customers
- **Geofilters:** An image overlay that can be accessed within a specific area on social media platforms

Questions

1. What marketing strategies does Snapchat use?
2. Is it better to advertise on Snapchat or Instagram?
3. What do Instagram and Snapchat have in common?
4. Who is the target audience for Snapchat?
5. What are snap ads?

Class exercise

1. Design an Ad campaign for two social media platforms (Snapchat and Instagram) for a brand of your choice.
2. Compare the two campaigns.

CHAPTER 9

Marketing on the Go — Mobile Marketing

Introduction

This chapter introduces a multichannel digital marketing technique, i.e., mobile marketing. This form of marketing aims at targeting potential customers through mobile devices such as a smartphone. Mobile marketing is an art that provides smartphone users personalized and location-based information whenever and whatever they want, even if the user is on the go. This chapter discusses different forms of mobile marketing. Further in this chapter, mobile advertising is introduced, followed by the importance of mobile advertising analytics.

Structure

In this chapter, we will learn about the following topics:

- Mobile marketing
- Forms of mobile marketing
- Mobile advertising
- Mobile campaign development
- Mobile message advertising
- Mobile advertising analytics

Objectives

After reading this chapter, the reader will be able to develop a thorough understanding of advertising on mobile devices. The reader will be able to learn objectives and features of mobile advertising. The reader will also be able to design a mobile advertising campaign and measure the performance using mobile advertising analytics.

Mobile marketing

Nowadays, almost every one of us is glued to our smartphones. India has the highest mobile data consumption in the world at the rate of 12 Gigabytes per user per month. Our country is adding as many as 25 million new smartphone users every quarter¹ making it a flourishing ground for marketers to promote their brands on mobile devices. The major benefit of mobile marketing is that you can connect your potential customer with just a single tap on the screen of a mobile device at any time of the day.

Mobile marketing is a form of digital marketing that makes use of mobile or wireless devices for reaching the target audience via email, websites, apps, and social media. Marketers are using this form of marketing because it can create true omnichannel customer engagement. India had 1.2 billion mobile subscribers in 2021, of which about 750 million are smartphone users. It is poised to be the second-largest smartphone manufacturer in the next five years. *The smartphone market is expected to reach 1 billion smartphone users by 2026*, according to Deloitte 2022 Global **Technology, Media and Entertainment, Telecom (TMT)** predictions.² [Figure 9.1](#) illustrates how mobile marketing fits into digital marketing strategy:

Figure 9.1: Mobile marketing³

For an effective mobile marketing strategy, you need to leverage mobile devices for connecting a large number of customers in real-time for engaging and acquiring new customers. You can use any mobile marketing channel to connect to your audiences. The mobile marketing channels include the following:

- Pay per click (PPC)
- Social media marketing (SMM)
- Email marketing
- Content marketing, and
- Search engine optimization (SEO)

Forms of mobile marketing

Mobile marketing focuses on reaching the target audience on their mobile phones, tablet computers, or any other wireless device. Mobile marketing

comes in a wide variety of forms, the most notable of which are as follows ([Figure 9.2](#)):

Figure 9.2: Types of mobile marketing⁴

SMS marketing

Informing clients about items, sales events, or future deals by text messaging is a common practice for businesses. [Figure 9.3](#) shows an example of SMS marketing:

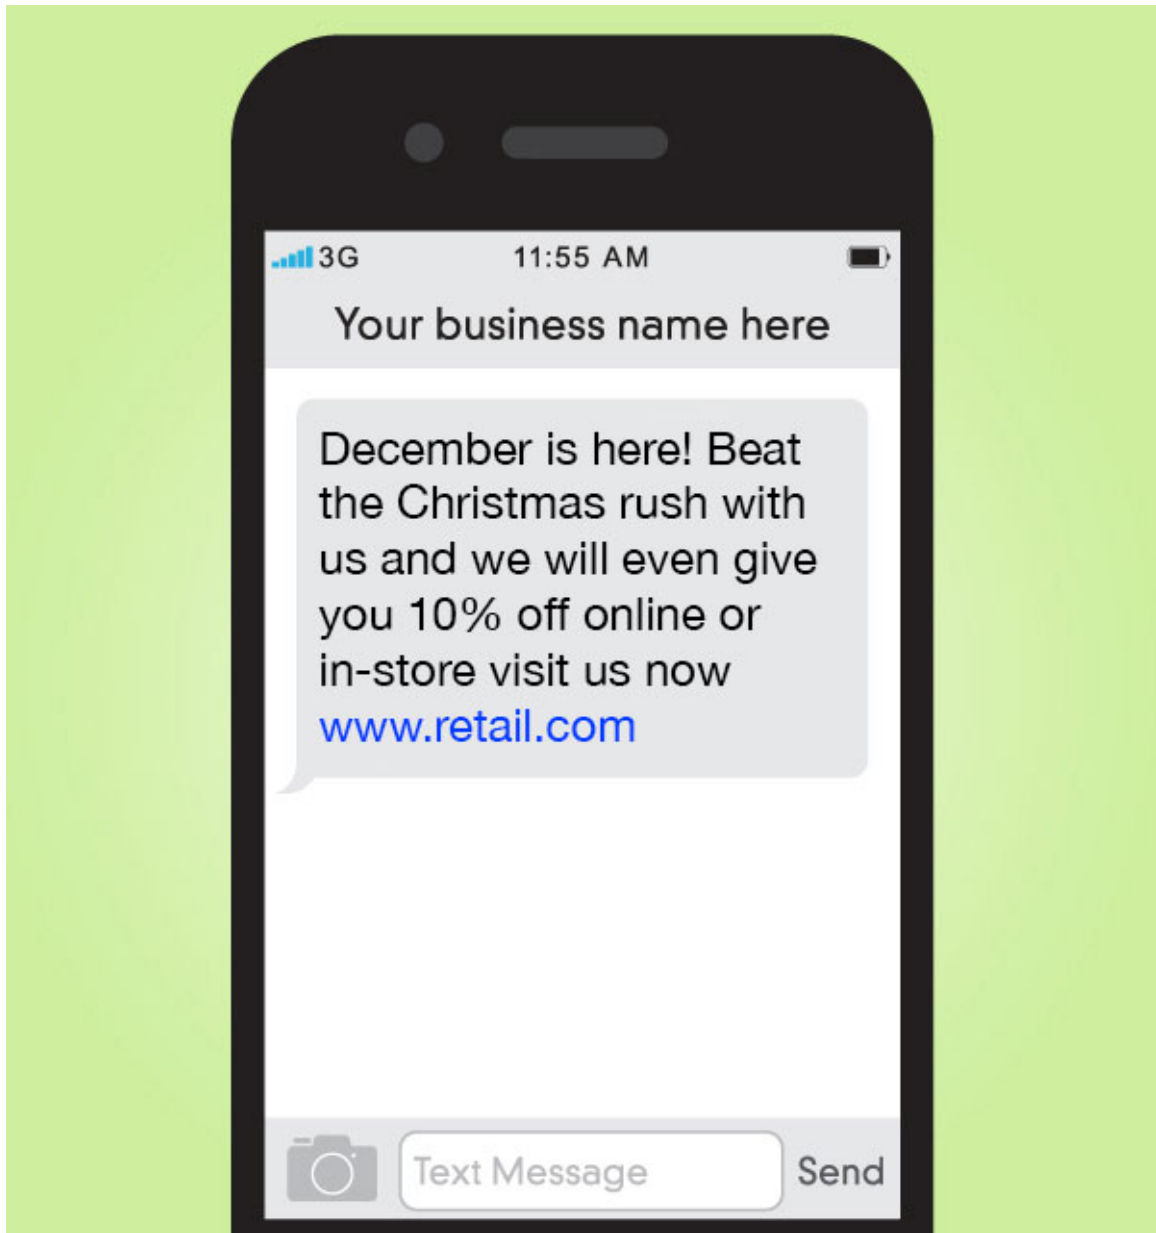

Figure 9.3: SMS marketing⁵

MMS marketing

Businesses use images, music, and video to communicate with their consumers about their goods and services in a variety of ways. [Figure 9.4](#) shows examples of MMS marketing:

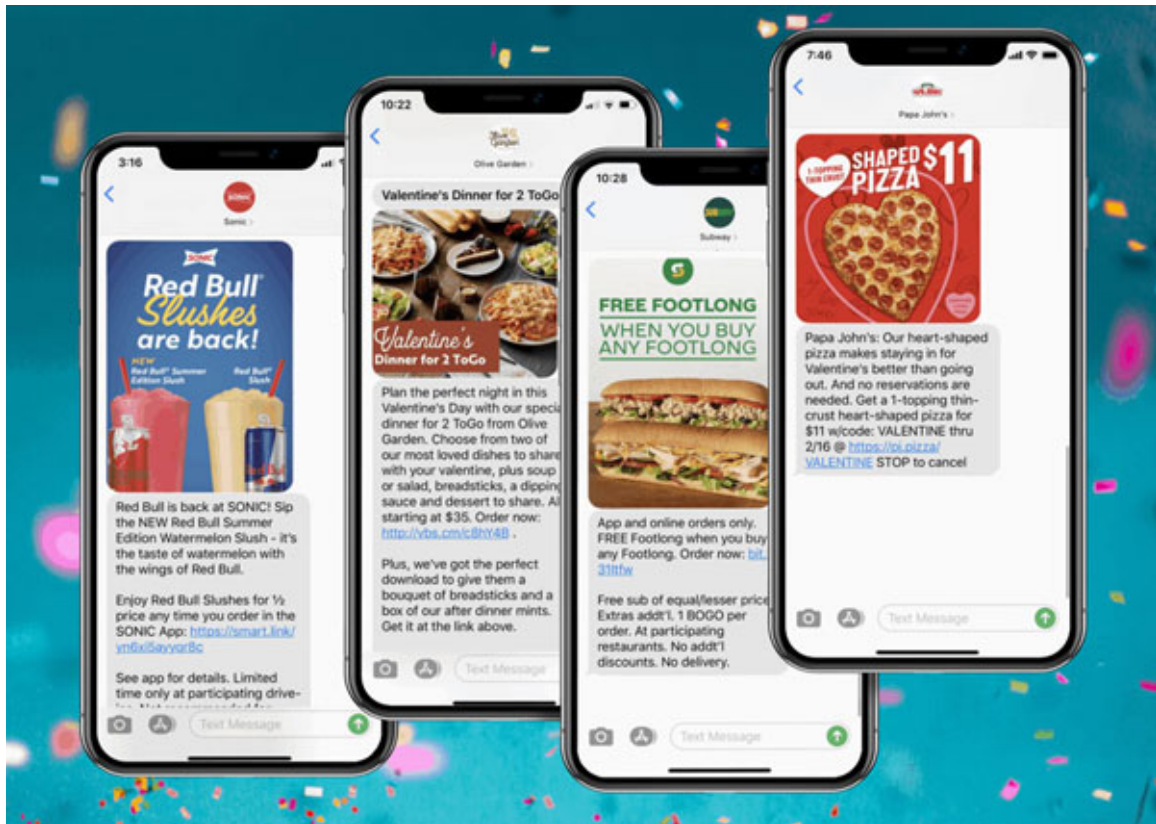

Figure 9.4: MMS marketing⁶

App-based marketing

These days buyers may easily peruse businesses' goods and services using smartphone applications. The company advertises on the app and provides alerts to consumers about forthcoming events and discounts through the app, making it easy for them to stay up to date. [Figure 9.5](#) illustrates app-based marketing:

In-game marketing

Several smartphone users download games to play. Whenever a mobile game is active, marketers place their ads in a little area at the top or bottom of a screen. Pre- and post-game advertisements are also shown. [Figure 9.6](#) shows an instance of in-game marketing:

Figure 9.6: An instance of in-game marketing⁸

Location-based marketing

A meal delivery ad is a wonderful example of location-based marketing. This kind of advertising is geotargeted, which means that it will promote food delivery from local restaurants and cafés depending on the mobile user's current location. [Figure 9.7](#) shows an example of location-based marketing:

Mobile advertising

Mobile advertising is a subset of mobile marketing. It is advertising on mobile phones or any other wireless device such as tablets. It is possible to get good results with mobile advertising without compromising the quality of the campaign in any way. Customers view the ad placement position on their mobile devices on a regular basis, so companies just need to be there to be recognized. If you want to build your company in this digital age, mobile advertising is a technique that you can use to your advantage.

Every day, we are bombarded with many forms of mobile advertising, some obvious and others not so much. Instagram Story advertisements, which appear between the tales of your friends on Instagram, text and picture ads on carousel Ads, Facebook, Snapchat Filter ads, YouTube video ads, and also the alerts from our downloaded applications are only a few instances of mobile advertising on mobile devices. [Figure 9.8](#) shows us the increase in the number of mobile users:

Figure 9.8: Increase in the number of mobile users with year¹⁰

Objectives of mobile advertising

As mobile usage has expanded, so has the number of objectives for mobile advertising that can range from new lead generation to customer retention via new offers. Mobile advertisements can be increased by sending detailed information about a particular product or service. Brand awareness events such as quizzes, contests, and so on can also be used. The marketer's job is to keep customers interested and involved by providing them with a variety of information.^{[11](#)}

Benefits of mobile advertising

There are various benefits of mobile advertising:

- **Large audience:** The usage of mobile has extensively increased. Today every individual has a cellphone with them at all times. Almost everyone is online; whether it is to check social media, make an online purchase, or send an email, this provides an enormous potential client base.
- **Low cost:** Advertising via mobile devices is far less expensive than through more traditional means, like television or print media. You may use a broad array of mobile media to engage with the brand at a low cost.
- **Easy tracking:** You may now easily monitor the results of any mobile advertising campaign, thanks to technological advances. It provides rapid and thorough data analytics, including impressions, click-through rates, shares, audience demographics, and much more, for a wide range of data.
- **Quick response:** Response time is really fast because the target audience is constantly near the gadgets or watching the displays. In a fraction of seconds, the adverts would either be reacted upon or rejected.
- **Geotargeting:** You can easily target the audience most likely to react or interact with a specific ad after you have studied the data and user demographics you might have gathered.

Features of mobile advertising

You can easily create and implement a mobile marketing campaign. It is easy to find advertising companies that specialize in mobile marketing services to assist you and your company and software that is easy to use and excellent customer service. Some of the features are as follows:^{[12](#)}

- The mobile marketing campaign may be launched in less than 24 hours, making it easy to get started.

- When you use mobile marketing software, you will know exactly how successful your advertisements are by tracking their delivery, response, and conversion rates.
- Mobile marketing software interfaces intend to help you pick and select who you send your adverts and allow you to promote directly to the target demographic.
- Advertisements may be turned off at any time by subscribers if they do not find them interesting and informative.

Mobile campaign development

An effective mobile marketing campaign may be used for a number of different purposes, such as increasing the number of people who sign up for your mailing list or register for your service, distributing discount coupons, or improving the way customers interact with the brand. There are a few steps that you can follow for an effective mobile campaign development:

Approach carefully

It is not a good idea to rush into the mobile marketing campaign without serious consideration of the strategy you will use. Your mobile marketing strategy should focus on attracting and retaining customers and re-engaging those who have already purchased from your company.

Do not just think about what your customers want; think about what they will really want to hear. Considering the context is particularly critical when it comes to mobile marketing. In order to gain the confidence of the mobile user, you must show them that you have their permission and encourage them to interact with your content; disruptive marketing is certainly deterrent.

Set goals and objectives

Setting goals and objectives for mobile marketing is as important as it is for any other marketing campaign. It is important to know how the mobile marketing campaign fits into your entire marketing strategy and what precise results you want to accomplish.

Marketing is an integral process; hence, marketers should keep in mind the customers' satisfaction and after-sale services while setting the goals and objectives. You can select any of the goals as mentioned in [*figure 9.9*](#):

4 Mobile Marketing Goals

Figure 9.9: Mobile marketing goals¹³

Prepare for a strong landing

It is possible that your mobile marketing plan may encourage customers to interact with your company in ways other than via social media or text messages. Ideally, you should create a mobile-specific landing page for the campaign in order to increase conversions or improve the user experience.

[Figure 9.10](#) shows an example of a landing page:

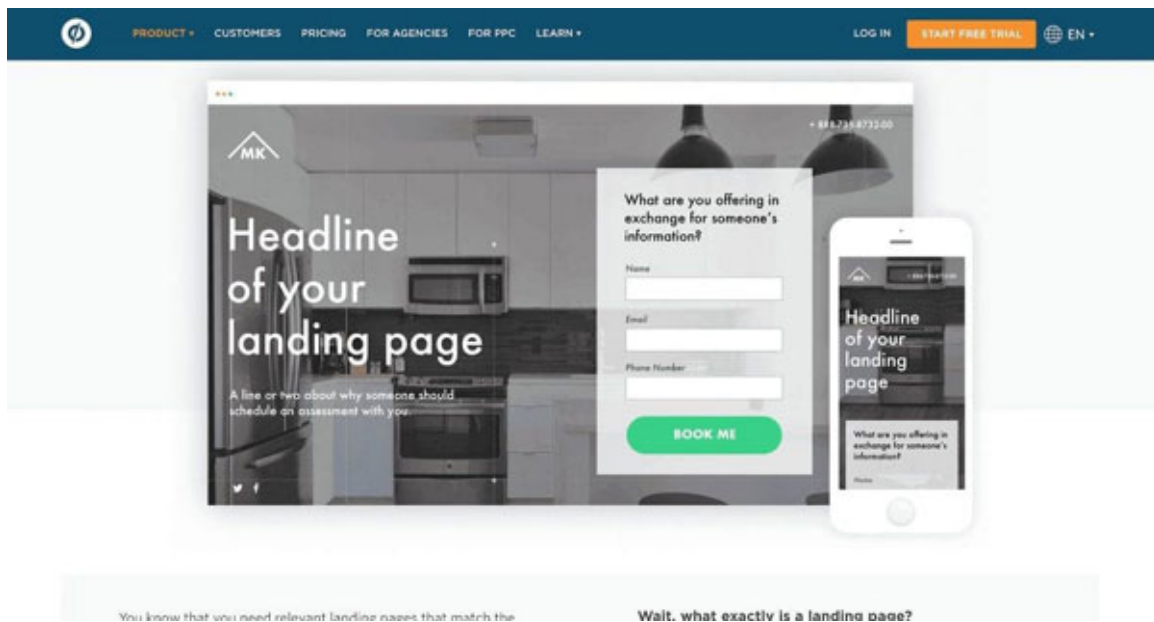

Figure 9.10: Landing page as an example¹⁴

As a part of the mobile marketing strategy, you must guarantee that your customers' experience is not onerous by providing clear calls to action and simple instructions. You must ensure that the website is user-friendly. You might lose them if a procedure is cumbersome and confusing.

Create the campaign

Campaigns for mobile marketing might need a mix of creative and technical abilities. With a variety of options available, you can tailor your campaign to your audience's interests and needs by using a wide range of creative elements. Consider legal and privacy risks when dealing with third-party applications and services. Read the small print to ensure that you and your users are protected.

Launch your mobile marketing campaign

In order to start your campaign, it must first be set up and tested. If you are running a contest or offering discounts/offers when you launch the mobile marketing campaign, you might see a flurry of activity. Expect an increase in activity, questions, increase in customer support requests, and technical glitches.

Keep in mind that the campaign has a defined beginning and end date and that you might need to provide resources to ensure that campaign is successfully

implemented and managed.

Measure and analyze

When it comes to mobile marketing, statistics are readily available to you during and after the campaign.

Keep an eye on the numbers during the campaign and make sure your goals are tied to metrics from the start. Determine what worked and what did not, taking into account the campaign's budget, limits, and also technical performance after it is over.

The ability to monitor and evaluate the effectiveness and conversions of the mobile advertising campaign is critical whenever it comes to mobile marketing. For the mobile marketing campaign, the following are the five key channels. Your company or organization must select the one that is most suited to the campaign type and set up the required tracking for your campaign.

Mobile message advertising

You need to look at the kind of mobile device carrier, device identity, timestamp, and response history for certain numbers and URL link conversions in order to use this method of advertising for mobile messaging purposes:

- **Mobile apps:** The vast number of factors that might influence applications makes it tough to keep track of. Additionally, the applications themselves might include data points.
- **Mobile ads:** It is based on the number of individuals who see them. Based on what the ad's trigger is, the adverts are monitored. One-pixel images, JavaScript codes, and even the ads themselves may be used to measure the effectiveness of an ad campaign.
- **Mobile context:** When a person is using their phone or tablet, this really is the context in which they are operating. Marketers may learn a lot from this information. It is possible to break context down into four variables: proximity, location, time, and device.
- **Cross-media impact:** It has become more fashionable to integrate mobile and conventional advertising efforts to create a *cross-media effect*. QR Codes may be seen in print advertisements as one instance of this. Measurement of the impact this combination does on an advertising campaign's efficacy is critical.

Mobile advertising analytics

Data from mobile app, website, and Web app visitors is gathered to identify the unique users, follow their itineraries, record their activity, and report on app's success. Traditional Web analytics may be used to boost conversions, whereas mobile analytics are essential for creating outstanding mobile experiences.¹⁵

Reasons to use mobile analytics

Mobile analytics offers businesses a unique window into the lives of app users that would otherwise be hidden from view. It is common for analytics to come as a part of a piece of software that can be integrated into a company's website or app to take, store, and analyze data. In order to make better judgments in these areas, sales, marketing, and also product management teams rely heavily on just this data. Companies are left in the dark without the mobile analytics solution. They cannot figure out what the users are engaging with, who the users are, what drives them to the site or app, and what causes them to leave.

[Figure 9.11](#) shows a dashboard of the mobile analytical tool—App Radar:

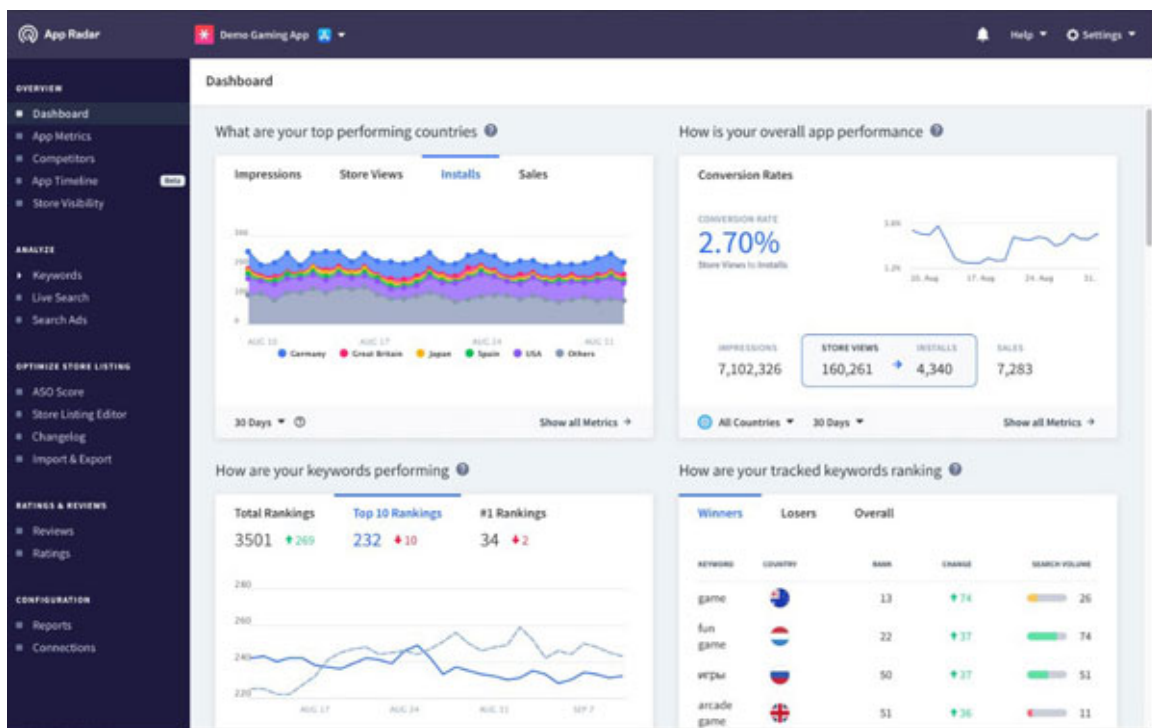

Figure 9.11: An example of a mobile analytical tool, App Radar¹⁶

Importance of mobile analytics

As more and more people are using mobile applications, it is crucial to know how to use mobile analytics to your advantage in order to succeed in the increasingly digital environment. Consumers are increasingly making purchases, doing research, and interacting with their favorite companies using mobile applications. As the mobile industry continues to develop, businesses can no longer neglect mobile customers. Businesses that want to be successful on mobile should have a mobile analytics-informed strategy that ensures speedy, tailored experiences for customers throughout their entire journey.

Mobile analytics can be used by teams throughout the company to understand their consumers better and create better user experiences. Mobile analytics may help product managers decide on the best course of action for developing apps. Mobile analytics must be used by user experience and user interface designers to build user flows that are engaging and also responsive to the user preferences. Mobile analytics are essential for IT and technical teams if they want to enhance app performance and create a fantastic user interface. Marketers may use mobile analytics to find and acquire new customers, strengthen existing relationships, lower churn, and boost customer loyalty.

Examples of mobile analytics

Use mobile analytics to promote the company and connect with customers through mobile devices. Illustrations of how the mobile analytics may be applied will follow:

- **Mobile advertising analytics:** The analysis of mobile advertising has seen rapid expansion in the field of mobile analytics. Advertising over mobile devices is growing in popularity as more people switch to smartphones and tablets. Tracking metrics like conversion rates, click-through rates, and reactions to campaigns are all examples of mobile advertising analytics. These data help marketers determine the **Return On Investment (ROI)** for the mobile advertising spend. [*Figure 9.12*](#) shows a dashboard of the mobile advertising analytics tool—AppsFlyer:

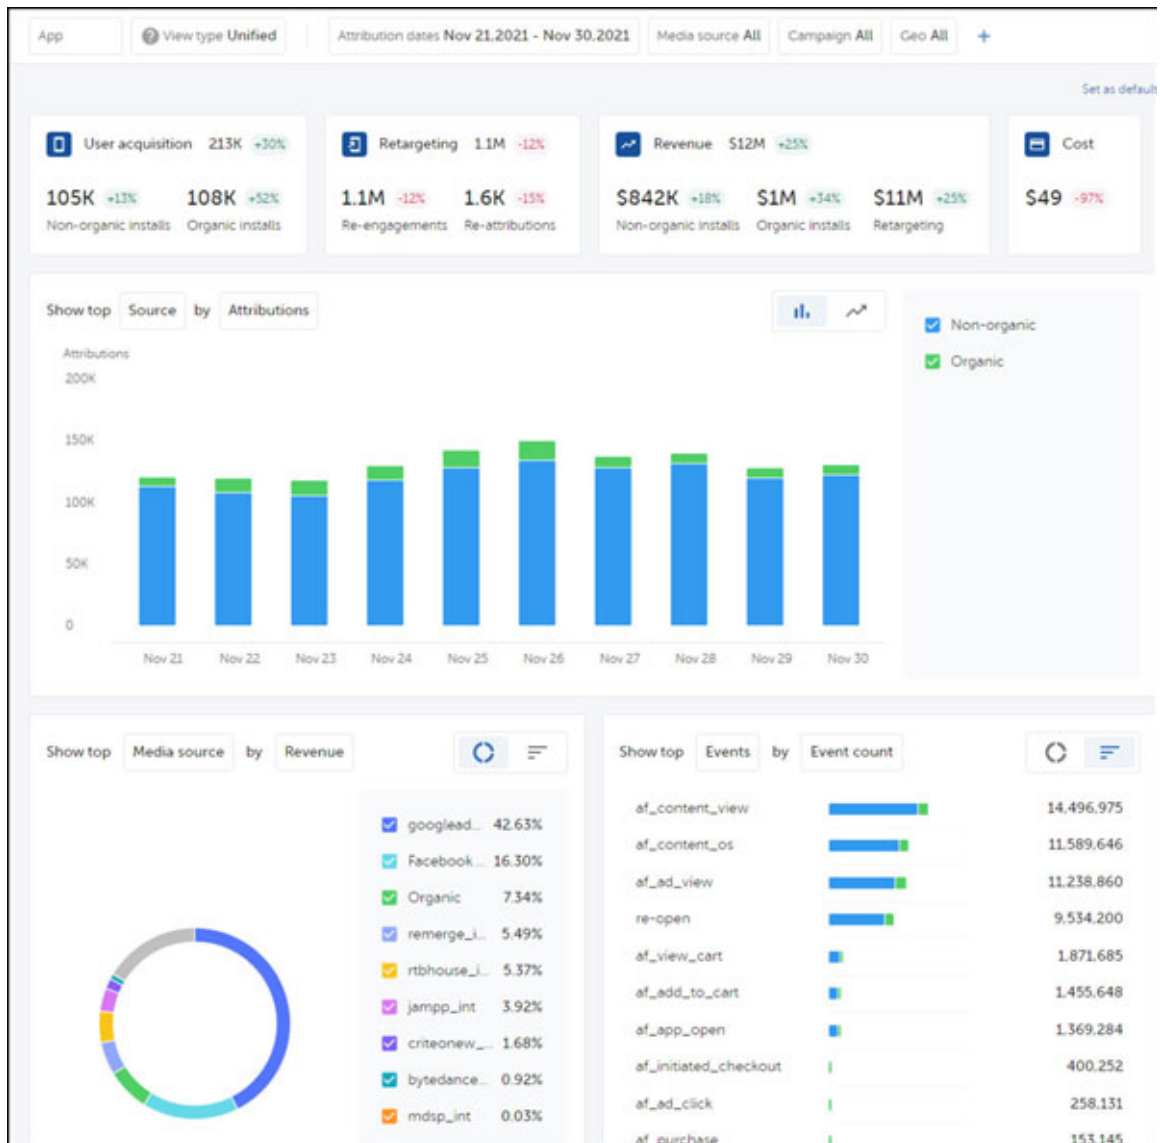

Figure 9.12: An example of mobile advertising analytics, AppsFlyer¹⁷

- **Web analytics:** It is also used to target and attract new consumers via mobile Web analytics, which monitors online browser activity on smartphones and tablets. The website's bounce rates, page views, click-thru rates, and other interactions may be analyzed by marketers to better understand how visitors use the site. Improve the user experience on mobile devices and boost customer engagement online by using this tool. [Figure 9.13](#) shows the dashboard of Google Analytics:

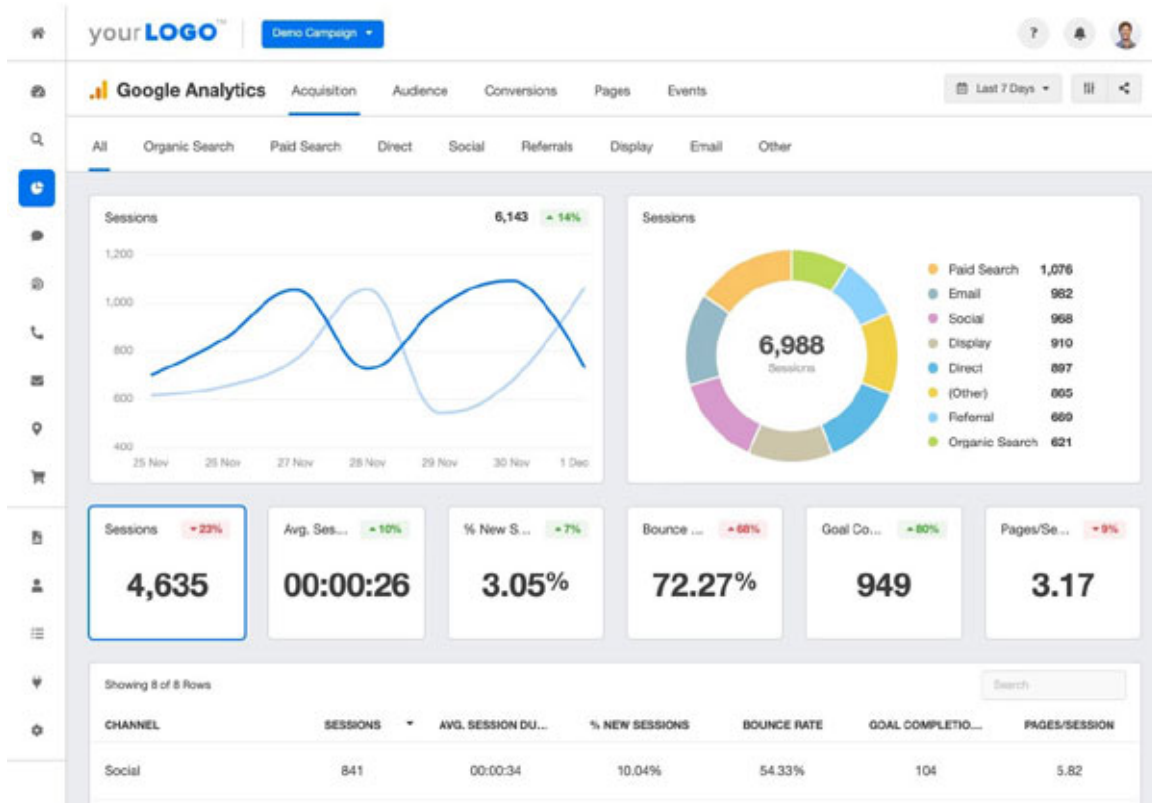

Figure 9.13: An example of Web analytics, Google Analytics¹⁸

- **Funnel analysis:** Mobile analytics may be used to do funnel analysis because of its focus on customer behavior. In this way, companies may get a deeper understanding of their mobile customers and the elements that drive their purchasing choices. Using mobile analytics, firms may examine numerous possible conversion routes and devise a strategy for engaging with consumers and ensuring they go through the funnel.

Conclusion

It is possible to get good results with mobile advertising without sacrificing the quality of the campaign. Customers examine the ad placement position on their mobile devices on a regular basis, so companies just need to be there to be recognized.

Advertising via mobile devices is far less expensive than through traditional means, like television or print media. Response time is really fast because the target audience is virtually constantly near the gadgets. Easy tracking allows you to easily monitor the results of any mobile advertising campaign, thanks to technological advances.

Without a high level of technological knowledge, you can easily create and implement a mobile marketing campaign. Mobile marketing software interfaces are intended to help you pick and select who you send your adverts to allow you to promote directly to the target demographic. Your mobile marketing strategy should focus on attracting and retaining customers and re-engaging those who have already purchased from your company.

Campaigns for mobile marketing might need a mix of creative and technical abilities. Keep in mind that the campaign has a defined beginning and end date and that you might need to provide resources to ensure that the campaign is successfully implemented and managed.

In the upcoming chapter, we will learn about **Search Engine Optimization (SEO)**. The reader will be able to perform on-page and off-page optimization.

Key terms

- **Mobile analytics:** Analysis of data generated from mobile applications for identifying unique users.
- **Funnel analysis:** Analysis of buying journey of potential customers and measure of conversion rate.
- **Disruptive marketing:** The test of daring/experimental marketing strategies rather than implementing traditional marketing methods. For example, Uber changed the way we travel these days.
- **Web analytics:** Analysis of data generated from the internet for using the Web optimally.

Questions

1. What are some challenges associated with mobile marketing?
2. Why is mobile marketing so effective?
3. What are some mobile marketing best practices?
4. Explain mobile marketing. What are the advantages and limitations of mobile marketing?
5. What is the difference between mobile responsive and mobile friendly?
6. How would you plan your mobile marketing strategy for a new product launch?

Class exercise

Develop the content for each type of mobile marketing for promoting a newly launched course by an institute of repute.

CHAPTER 10

Search Engine Optimization (SEO)

Introduction

Search engine optimization (SEO) is the science of enhancing the visibility of your website organically by targeting unpaid traffic. SEO and its importance are discussed in this chapter. This chapter further explains on-page and off-page optimization techniques for increasing Web traffic. The tactics for improving SEO are also discussed in this chapter.

Structure

In this chapter, we will learn about the following topics:

- Introduction to SEO
- Importance of SEO
- Using internet search engine
- On-page and off-page optimization
- SEO tactics
- Search Engine Marketing
- Google Sandbox

Objectives

After reading this chapter, the reader will be able to have a deep insight into SEO. The reader can learn the working pattern of search engines after reading this chapter. The reader will also be able to understand the basics of **Search Engine Marketing (SEM)** and Google Sandbox.

Introduction to SEO

SEO is the practice of enhancing your website so that it appears higher in the search results of Bing, Google, and other major search engines. More exposure in search results means more potential clients and current customers will see your company and get interested in what you have to offer. [Figure 10.1](#) showcases various benefits of using SEO:

Figure 10.1: SEO-based features¹

Digital marketing relies heavily on SEO due to the obvious enormous volume of searches conducted each day, many of which have a business purpose in mind to learn more about a company's goods and services. Brands rely on search as the main source of online traffic and as a supplement to other forms of advertising. Having a better search engine ranking than your competitors might have a significant effect on the bottom line.²

It is true that the search results have evolved over time to provide people with more direct answers and information that really is likely to retain them on the results page rather than pushing them to other websites.

Importance of SEO

SEO is a must if you want to improve your company or the website's search engine rankings. In terms of SEO, a well-optimized post is the most crucial factor.

Improve rankings

SEO is essential if you want to increase the website's ranks in search engines such as Google, Yahoo!, Bing, and so on.

More traffic

You may get more organic traffic to the website by using SEO.

Become faithful

The SEO of your website may turn visitors into loyal customers. If you have a good SEO score, Google will promote your website to other brands in order to enhance traffic.

Increment your sales in your business

SEO for your website is a must unless you want to sell your company for less than what it costs to maintain it.

Help you to win the competitions

There are many rivals in your industry; thus, SEO is a must if you want to rise above the rest.

Know about your customer's demand

SEO is a great way to find out what your customers want. You can figure out what people want or need using efficient SEO techniques.

No need to pay for advertising

Advertising does not cost you anything. You may improve your website's traffic without having to spend money on **Pay Per Click (PPC)** advertising if you implement SEO on your site.

[Using internet search engines](#)

When doing research, several individuals turn to the internet first. Even though this may be the very first place, you seek fundamental information,

knowing how the internet works and how it may benefit you is the first step to intelligent use of the internet.

Working of internet search engines

In a virtual world, a search engine is like a virtual library. You may find valuable research information in the millions of domain names. As a matter of fact, you must begin somewhere.

Browser: When searching the internet, your browser is indeed the gateway to your journey. Starting your research may be aided by a wide range of search engines, including:

- Google
- MSN's Bing
- Baidu
- Yahoo!
- Yandex RU

Look at the following figure to see the market share of leading search engines:

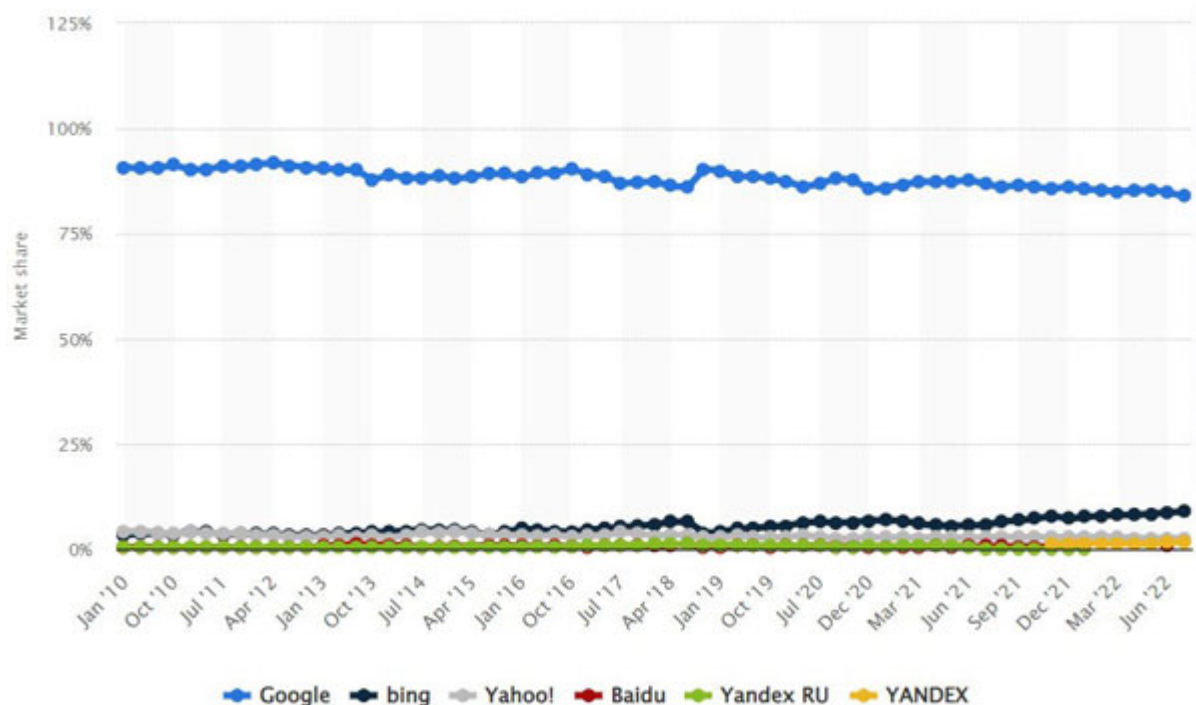

Figure 10.2: Worldwide desktop market share of leading search engines from January 2010 to January 2022³

You may uncover a wealth of information no matter which search engine you choose. Many individuals prefer one search engine above the others, and you may fall into that category.

To find the most reliable sources of information, see how fast a search engine can deliver your desired results, and then stick with that source. Using a single search engine saves a lot of time and effort.

The following is the most basic set-up for the search engines in terms of how the information is organized:

- **Domain name:** In the simplest terms, every website on the internet has its own unique URL. There is a website called www.apple.com, for instance. This is the URL for Apple's online store. Search engines and browsers will provide results for the Apple website if such a name is entered. This website will not be accessible if you use a different spelling in your browser's address bar.
- **Domain details:** A backslash (/) is often used to separate extra words from the domain name. This permits the site to be broken up into many pages so that a user may access various sections of content.
- **Subpages:** There may be even more subpages inside those pages, allowing you to narrow down your search even more and discover the results you require to conclude your investigation.
- **Keywords:** Search engines function similarly to the computers found in public libraries. If you are looking for information on a certain subject, you may enter a keyword, the book title or author, a query, and any other number of words. Online sites are ranked by the search engines based on the most relevant and frequently used keywords on some of those sites. You do not key in "carrot" to hunt for information about diets, for instance. Your search for "diet" or "dieting." Search engines use complex algorithms to evaluate which keywords are most relevant to the website's content online.
- **Popularity:** When it comes to search engine rankings, you may not know that popularity is a factor. In the case of weight reduction, you can come across a site discussing the health benefits of losing weight instead of a weight loss program itself. What gives a better search

engine ranking is the result of more people choosing this website over the weight loss product websites. Based on the prominence of a website, such rankings may shift across search engines over a period of a week.

Search engine and its working pattern

Indexing, crawling, and ranking all fall within the purview of the search engine's algorithms. The working of a search engine is shown in [figure 10.3](#). Website material is gathered and analyzed by Web crawlers sent out by search engine providers. There are continuous updates to this information and a determination of what data is presented on websites. The frequency with which the websites are checked for fresh changes is managed by the scheduler. The scheduler decides how often the website should be examined and crawled based on several criteria retrieved and parsed from websites. Please refer to the following figure:

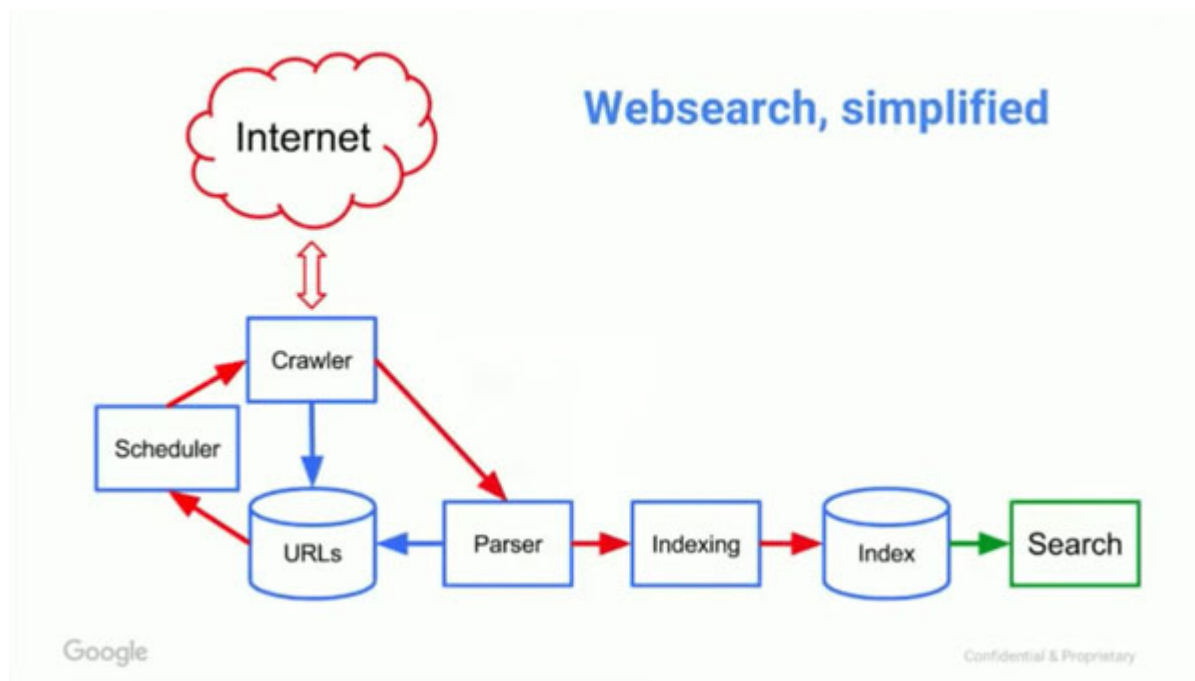

Figure 10.3: Searching engine working⁴

Search engines index websites once they have been crawled and evaluated. Search engines employ a variety of parameters throughout the indexing process to decide how and where a specific Web page might be shown in relation to just a user's search query.

Some search engines, however, do not operate in this manner. Websites are analyzed by search engines such as Bing, Google, and DuckDuckGo, which deliver search results depending on the user's query. Many other search engines, such as Wikipedia and Amazon, do not index or analyze the pages before returning results and instead rely only on the user's search term.

Scheduler

The search engine's scheduler evaluates the significance of new and previously examined URLs. Based on the perceived relevance of URLs, it uses a variety of algorithms to select when and how frequently to scan new URLs.

Web crawling

Crawlers are programs that automatically scour the internet in search of new website addresses in order to examine the information on the sites. Web crawlers download sites to be indexed by the search engine, which makes it easier for users to find what they are looking for. The crawler's primary objective is to discover the content on a website's pages. This makes it easier for people to find the information they are looking for on one or even more pages. For the search engines, crawling the Web is a typical technique. Search engines are able to provide effective findings for searches because of this. In addition to online crawling, the term *Web scraping* refers to the practice of extracting structured data from websites.

Parsing

The parser extracts links from the page, along with other key information such as content type. It then sends the reviewed URLs to the stored and the extracted data for indexing. The parser gathers information on the page's content type. After that, it indexes the URLs it has inspected by sending them to a database where they are saved and extracted.

Indexing

Indexing involves the process by which crawled pages are added to just an indexed database with information that has been processed. There are trillions of Web pages stored in the database.

On-page and off-page optimization

SEO is a method of increasing the visibility of your website when potential customers are searching for the product or service online. SEO is a complex process of increasing organic traffic to your website from search engines. For an effective SEO of your website, it is of two types—on-page and off-page SEO. On-page SEO is the process of optimizing your own website, whereas off-page SEO focuses on promoting your brand on the Web.

On-page SEO

On-site SEO (sometimes called *on-page* SEO) is the practice of improving various aspects of your website that impact the search engine rankings. Ranking criteria such as site accessibility, optimized content, page speed, keywords, and title tags all play a role over wherein the website displays in the search engine results pages. On-page SEO is all about improving the aspects of your website that you have direct access to or can alter.

Title tags

Each page on a site should include the title tag that contains your chosen keywords. Writing a good title tag involves following a number of best practices:

- Aim for 55–60 characters for the title tags (including spaces).
- If possible, place your keywords closer together in your title (ONLY in case it sounds natural).
- Do not overdo it with the keywords.
- Use a pipe bar (|) to separate the brand name from the rest of the title tag.

Headings (H1)

As headings are often the longest words on the page, search engines weight them more heavily than the rest of your page material. However, it is a good idea to include your goal keywords inside the page's headers, but only if they appropriately represent the page's content quality.

Limit the number of H1s on such a page to one. All the other headers should be H2 or H3.

URL structure

Include keywords into the URLs if feasible. Furthermore, do not go altering all of your present URLs just so they have a keyword within them. You must not update existing URLs unless you intend on redirecting your old ones to the new ones. Get the advice of an expert before you do this.

- Use descriptive names for the directories and folders to aid in navigation for end users.
- The URL should not include more than one term.
- Overdoing it might have a negative impact on the user's experience.
- Keep the URLs as short as feasible.

Alt text for images

You must be able to add *alt text* to all of your photographs on the website using any content management system. The screen reader software program uses this text instead of the picture's description to assist blind internet users to comprehend what is within the image. Images are indexed by search engines in the same manner as text, so include important keywords inside the image's title and description. This can help search engines better grasp the content of your website. Each picture on your website must include an alt property to comply with **Web Content Accessibility Guidelines (WCAG) 2.0**. You can see an example alt text in the following figure:

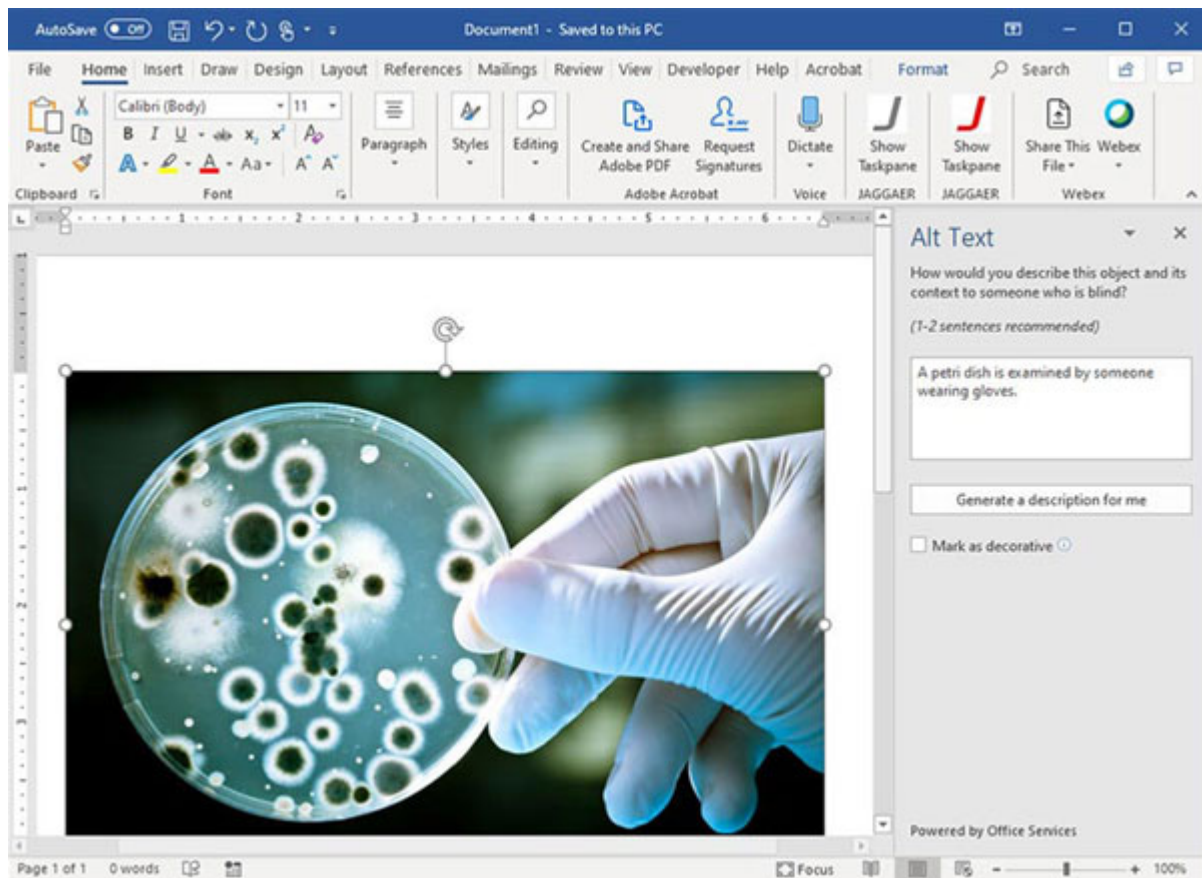

Figure 10.4: Alt text for images⁵

When developing alt text, consider the following tips in mind:

- Use at least 8–10 words to describe the picture in detail.
- Use your goal term in places where it seems most natural.
- If applicable, provide the geo-locator.

Fast-loading pages, or page load speed

Search engines like Google seek to give the greatest possible user experience by making it easy for people to locate what they are searching for fast. As a consequence, improving the speed of your website's pages might help it rise in search engine rankings.

In order to assess the site's mobile and desktop performance, you may use Google's PageSpeed Insights tool, which also provides advice on how to speed up the website. It is also possible to resolve the issues that are causing

your site to load slowly. Factors that affect the speed of a website include the following:

- Optimizing HTTP requests to the bare minimum
- Ensuring the server response time of 200 milliseconds or less
- Setting the browser caching to minimum a week is recommended
- Compressing data using gzip
- Having images that are less than 100 kb in size is a must (.jpg, .png, and .gif)
- Using an external style sheet for all CSS
- To reduce the size of all JS and CSS files
- Prioritizing the loading of items above a fold
- Mobile-friendliness is a must

Google has emphasized mobile page loading time as a critical ranking criterion in recent years. According to Google's current algorithm, you should design a mobile-friendly website for better results.

When designing a website for mobile users, it is important to think about the whole user experience. Creating the Mobile Usability report is a good technique to assess and improve the website's layout for mobile devices.

Page content

It is important that the material on your site has a purpose for visitors. They must be able to locate what they are searching for if they do a search that narrows it down to the page. User-friendly and useful are the most important requirements. Google uses a variety of methods to determine whether or not your material is of use.

- Aim for a minimum of 500 words of text. Despite the lack of a specific formula for the count of words the page must contain, Google seems to favor a website that has a lot of high-quality material around your keywords.
- Original to each page, not copied from the other pages on site, and relevant to the visitors' search queries are some of the requirements for unique content.

- If it seems natural, move the term closer to the beginning of the title.

Internal linking

For both visitors and search engines, it is a good idea to have internal links. *Internal links are hyperlinks that point from one page on a domain to a different page on the same domain. In other words, internal links connect pages on the same website, meaning that the source and target domain are the same.*

For instance, create a new page on your website dedicated to e-mail marketing and connect to it from other relevant sites on your website using internal links.

Schema markup

Structured data aids Google's understanding of the page's content. The recipe with star ratings or even step-by-step directions with the image carousel are examples of the structured data that Google uses to deliver *rich results* in search results. It is not uncommon for these high-quality results to appear at the top of search engine results pages, where they are more likely to be clicked on than ordinary organic listings, as shown in [figure 10.5](#):

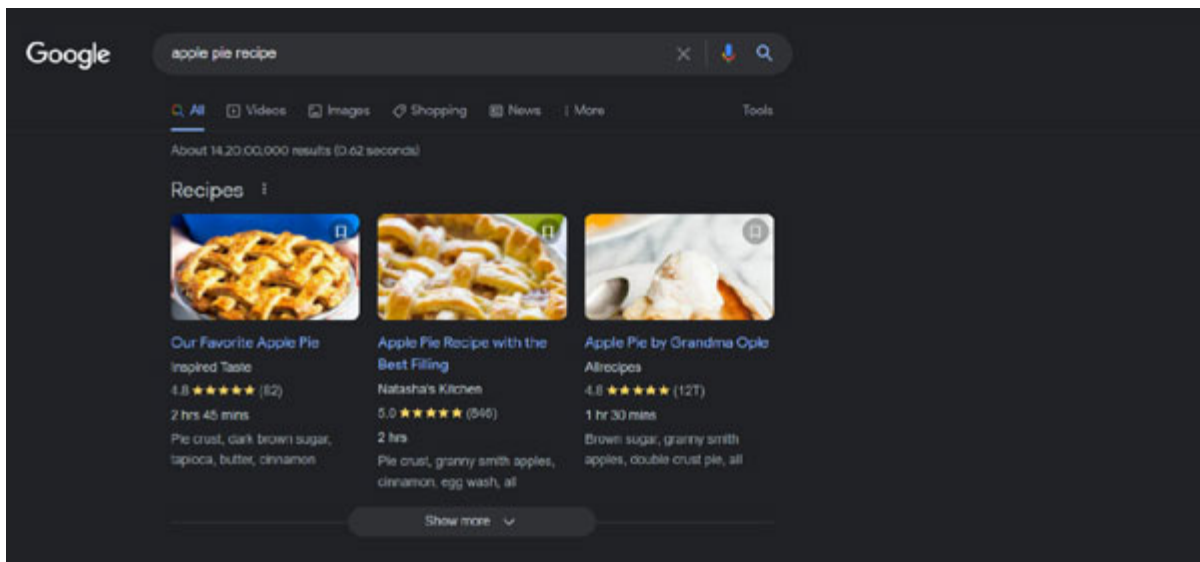

Figure 10.5: Search engine result page

Social tags

In the eyes of Google, your material is valuable and trustworthy if it is shared on social media by your followers. These strategies will help you get the most out of the pages that seem to be share-worthy on your site:

- The Open Graph tags and Twitter Cards should be installed.
- Include *tweet this quote* links or social media sharing buttons on every post.

Off-page SEO

The goal of off-page SEO is to build the domain's authority by acquiring links from other websites.

This is a fantastic example of how authority works. In the bathtub full of rubber duckies (links), ducks will climb to a top in case you begin to fill the tub with water (links), as shown in [figure 10.6](#):

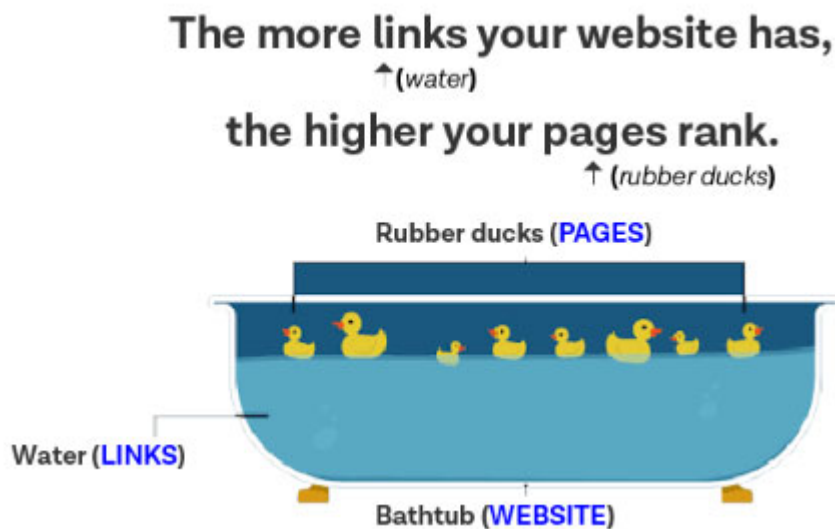

Figure 10.6: Bathtub as an example of off-page SEO

Using a site such as Wikipedia, you can see how it ranks for just about everything. A second rubber duck will float to the top of its bathtub because of the plenty of water in there.

Domain Authority tells search engines how authoritative your website is in comparison to the other websites. You may check your score by entering the domain name [here](#).

Optimizing an off-page SEO

Off-page SEO rankings are influenced by a variety of variables. Despite the fact that each one is approached in a different way, they all have the same ultimate aim of enhancing the trust and reputation of the website:

- Inbound links
- Guest blogging and guest posting
- Social media marketing
- Influencer marketing
- Unlinked brand mentions

The amount and quality of the backlinks pointing to the website are the most important factors in off-page SEO. Building links to your website using these methods is a good starting point:

- It is important to provide high-quality content which people want to share.
- Shares on social media, which lead to backlinks from other websites.
- Sending e-mails to influential people in your field to establish a connection with you.
- Doing guest blogging on the sites that are connected to your own is a great way to get your name out there. Your site would be linked to such guest articles.

Even if the sheer number of links is crucial, content authors and SEO experts are beginning to realize that the quality of the links is even more critical. As a result, the very first step in obtaining high-quality backlinks and enhancing an off-page SEO is to create shareable content.

SEO tactics

To retain and increase organic traffic to your website, you need to strategies your SEO techniques. Google makes a number of changes in its rank algorithm for enhancing the user experience. The SEO strategy should also be updated every year because the tactic that worked well for you last year may not produce the desired results this year also. If you are not getting

enough organic traffic, then you should improve your SEO strategy by following the SEO tactics given as follows:

Content optimization

You can increase the organic traffic to your website by optimizing your existing content through a process known as content optimization. Content optimization is the process of optimizing a page's on-site meta tags. This can be achieved by testing your meta titles to optimize CTR, having keywords (primary and secondary) at the correct density, identify, and update the contents of pages suffering from content decay, and including the *people also ask* section on your website.

Improving the page experience

As per Google, page experience is a set of signals that measure how users perceive the experience of interacting with a Web page beyond its pure information value, both on mobile and desktop devices. While page experience is important, Google still seeks to rank pages with the best information overall, even if the page experience is subpar. Great page experience does not override having great page content. However, in cases where there are many pages that may be similar in relevance, page experience can be much more important for visibility in search.⁷ You can improve the page's experience by boosting the page loading speed, creating a mobile-friendly page, and using HTTPS protocol. You can boost the speed of your page by minimizing unnecessary code, reducing server response time, choosing the right hosting options, and compressing images.

Increase the dwell time

Dwell time is the duration for which the visitor remains at the page after they click on a **Search Engine Result Page (SERP)** link and before the visitor goes back to SERP. You cannot increase the dwell time directly but can improve it by enhancing the user's experience. You can enhance the experience by making the contents of your page more readable, writing quality content, using short paragraphs, and using the most newsworthy facts.

Understanding the user's intent

For increasing organic traffic, you should understand the user's intentions. This includes what a user expects, what the user is searching for, and what search results will help them in answering their query. The user's experience can be improved by knowing them better. You should know the demography, geography, and interests of your target audience.

Optimizing your content for voice search

There is a tremendous increase in the use of voice assistants worldwide. Over 4.2 billion voice assistants are being used and are expected to reach 8.4 billion by 2024.⁸ These numbers suggest that you should create a voice assistant-friendly Web page for more conversational search engines. You can optimize your Web pages for voice search by including long-tail keywords and featured snippets.

Creating a YouTube channel

You should add more videos and visual content to your Web pages for increasing the dwell time. You should create a YouTube channel for your brand because videos help in building trust among audiences and have better ROI than text or static images.

Search Engine Marketing (SEM)

Using the SERPs to advertise company websites is known as **Search Engine Marketing (SEM)**. SEO and paid advertising are two methods of enhancing a website's exposure in SERPs. [*Figure 10.7*](#) shows certain SEM-based features:

Figure 10.7: SEM-based features⁹

SEO is a narrower word that covers a wider range of topics. Marketing operations that use search engine technology for marketing reasons are known as SEM. SEO, sponsored ad placements, and the other search engine-related services and operations are all included here.

Consumers who are looking for a specific phrase related to a website make up the majority of traffic coming from search engines. Using this tool efficiently and driving traffic to the company's website requires marketers to grasp both paid and organic SEM and the visibility they can obtain from each.

Advantages of Search Engine Marketing

In the following respects, SEM is indeed a smart move:

Consumers who are actively searching for the product or service may be reached with SEM, as opposed to other popular forms of internet

advertising. E-mail marketing, for instance, entails sending e-mails to the database of customers with the expectation that a few of these customers would make a purchase from the company. Customers might not have been interested in products or services, or customers might well be interested but not at that specific time, but customers might not get an e-mail. Customers might consider e-mail marketing intrusive, resulting in a tarnished image. SEM captures the customer at a moment when somebody is actively seeking for the products or services, resulting in a somewhat more involved consumer and often a more responsive reaction.

Search engine traffic stems from voluntary, audience-driven searches. This indicates the visitors via a search-results link have indeed not picked the listing from your peers but have selected the search query, which led to the listing being presented. It has resulted in a heightened level of interest in the product or service and a willingness to make a purchase. The following are the advantages of SEM:

- **Highly measurable:** You can keep track of the progress of your campaign at all times with the help of tools such as Google Ads. If you want to ensure that everything is under perfect control, you may use Analytics integration as well.
- **Real-time monitoring:** By using analytics interface, you can see exactly what is going on in real-time and make adjustments based on what you observe.
- **Pay per click:** You will only pay if you achieve results with this service. You may set the maximum daily budget and maximum cost per click in which you are ready to spend. This ensures that the campaign is successful.
- **Speed:** In comparison to other methods like SEO, search engine advertising enables you to get large-scale outcomes very quickly.
- **Within everyone's reach:** SMEs and big corporations alike may make use of this solution due to its scalability in budgetary terms. They are all in the same boat when it comes to competing for the top spots on search engine results pages.
- **Segmentation:** Finally, this tool has a wide range of segmentation options. You will be able to reach a wider audience by concentrating

on keywords. You may also narrow the results down based on things such as geography, language, or even conduct.

Google Sandbox

Google Sandbox may be thought of as a trial phase for new websites, during which time they are subjected to specific limitations. This is mostly due to the relevance that Google assigns to each page. Depending on rankings, the search engine finds older sites to be more trustworthy. Google Sandbox actually exists, even though it is not officially recognized by search engines. New websites are first filtered out by Google's algorithm, which then ranks the older pages higher and pushes the newer ones below.

It is a good idea to check your website to see whether it has been sandboxed by Google. Unless your website has been sandboxed, search results will only show your domain name. For the terms you are targeting, Google will not show your site in the top results. If you have used backlinks, they will also be hidden from search results.

Getting organic traffic is a lengthy process. The duration of this phase might range from one month to a whole year. It is possible, however, to shorten the time spent waiting. You may do the following:

Getting indexed: Check to see whether Google has indexed your website. If your website is indexed, then **URL is on Google** is selected, as shown in [figure 10.8](#). To find your website, you will need to enter its domain name into Google's search bar. If you have not already done so, this is the first thing you should do. You just need to register your domain and upload an XML sitemap to the Google search dashboard:

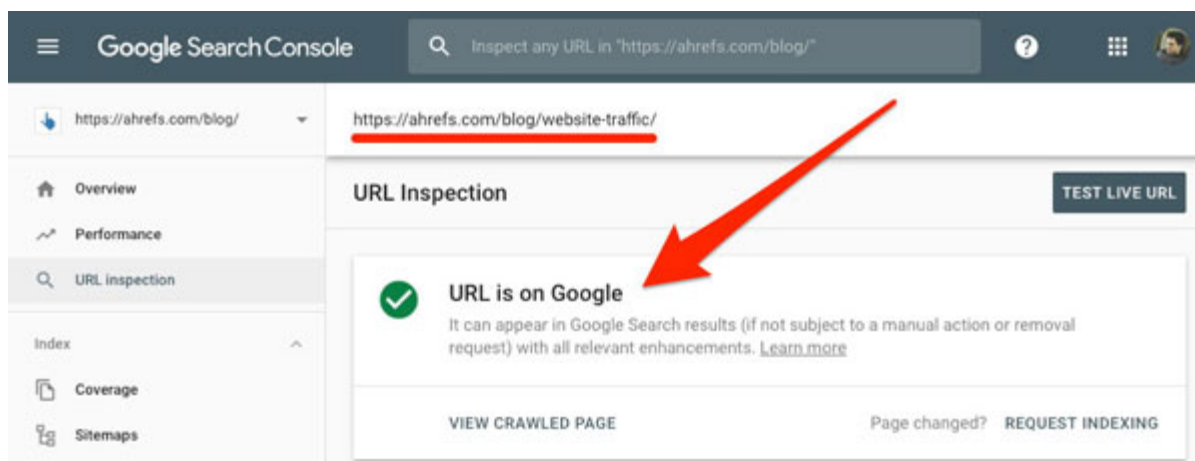

Figure 10.8: Page is indexed¹⁰

If your company URL is not indexed, then you can see the screen as shown in [figure 10.9](#):

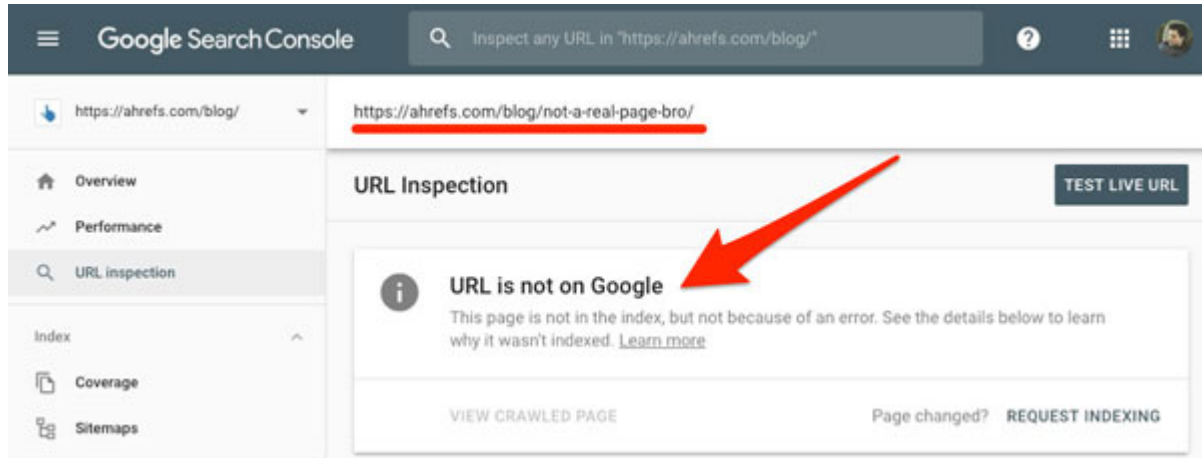

Figure 10.9: Page is not indexed¹¹

User traffic: Google's Sandbox duration may be reduced by increasing audience interaction. In order to move out of Google Sandbox, one of the greatest ways is to generate organic traffic.

Social signals: Taking part in social media is a terrific way to shorten the time spent in Google Sandbox. Build your brand's social media presence by launching marketing campaigns and engaging your audience. Google likes to see activity on your website linked to the social media accounts, so be sure to do so.

Site authority: When a new website goes live, Google has no idea whether the information it contains is real. You must establish the authority of your website. Site authority may be built via the use of legitimate internal links, backlinks, and also mentions from high-ranking sites. [Figure 10.10](#) shows the domain ratings for your website:

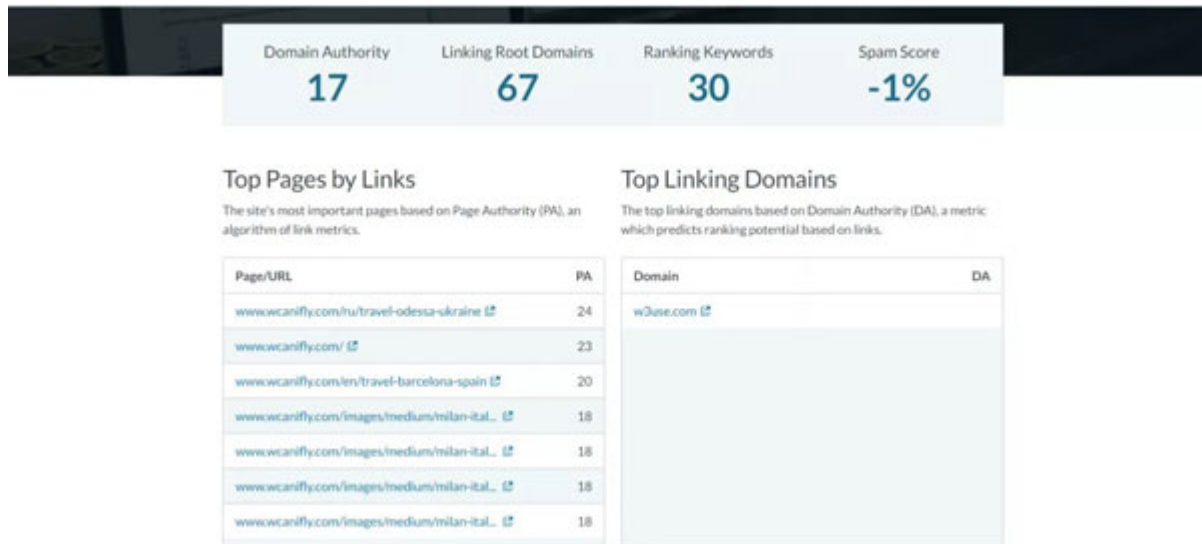

Figure 10.10: Domain authority¹²

Buy an active domain: If you want to circumvent Google's sandbox, the quickest way is to buy the active domain. You may save time and money by purchasing a domain name for a website with a reasonable amount of traffic.

Conclusion

In this chapter, we learned about how SEO is the practice of enhancing your website so that it appears higher in the search result of Bing, Google, and other major search engines. Digital marketing relies heavily on SEO due to the enormous volume of searches conducted each year.

SEO is essential if you want to increase your website's ranks in search engines such as Google, Yahoo!, Bing, and so on. You may get more traffic without having to spend money on pay-per-click advertising if you implement SEO on your site.

Indexing, crawling, and ranking all fall within the purview of the search engine's algorithms. Website material is gathered and analyzed by Web crawlers sent out by search engine providers.

Websites are analyzed by search engines such as Bing, Google, and DuckDuckGo, which deliver search results depending on the user's query. Indexing involves the process by which crawled pages are added to just an indexed database with information that has been processed.

In the upcoming chapter, you will be able to learn the use of Web analytics for measuring the success of your marketing strategy. The reader will be able to know about multichannel attribution and universal analytics.

Key terms

- **SEO:** Search Engine Optimization.
- **Search engine:** Application software designed for searching the Web.
- **Web crawler:** Also known as spider/spiderbot/crawler. It is used for web indexing.
- **Title tag:** It should contain the keywords.
- **SERP:** Search Engine Result Pages.
- **Google Sandbox:** It is a filter that prevents new websites from ranking in Google's top search results.

Questions

1. What is SEO? And why it is important for businesses?
2. What is Google Sandbox?
3. Explain in the brief working pattern of SEO.
4. What do you mean by on-page and off-page optimization?
5. Explain URL structure.
6. What are the benefits of Search Engine Marketing?

Class exercise

1. Compare all the available search engines on the basis of performance and usage.
2. Discuss different factors responsible for increasing the rank of your page organically.

CHAPTER 11

Web Analytics

Introduction

This chapter introduces various metrics to be used for measuring the success of social media marketing strategy. The use of Google analytics as a tool for evaluating the performance of marketing campaigns is discussed in this chapter. Further, Google AdWords and methods of collecting the data for Web analytics are also explained in this chapter.

Structure

In this chapter, we will learn about the following topics:

- Social media metrics
- Google Analytics
- Google AdWords
- Data collection for Web Analytics
- Multi-channel attribution
- Universal Analytics
- Tracking code

Objectives

After reading this chapter, the reader will be able to evaluate the success of social media marketing campaigns. The reader will learn about the features of Google analytics and will be able to use it for analyzing and monitoring the website traffic for optimizing the marketing strategy. The reader will also be able to develop an understanding of multi-channel attribution, universal analytics, and tracking code after reading this chapter.

Social media metrics

The data you collect and use to evaluate the success of social media operations is known as the social media metrics. You may use these measures to see whether the time and money you are investing in social media marketing is paying off. [Figure 11.1](#) illustrates the use of advanced analytics:

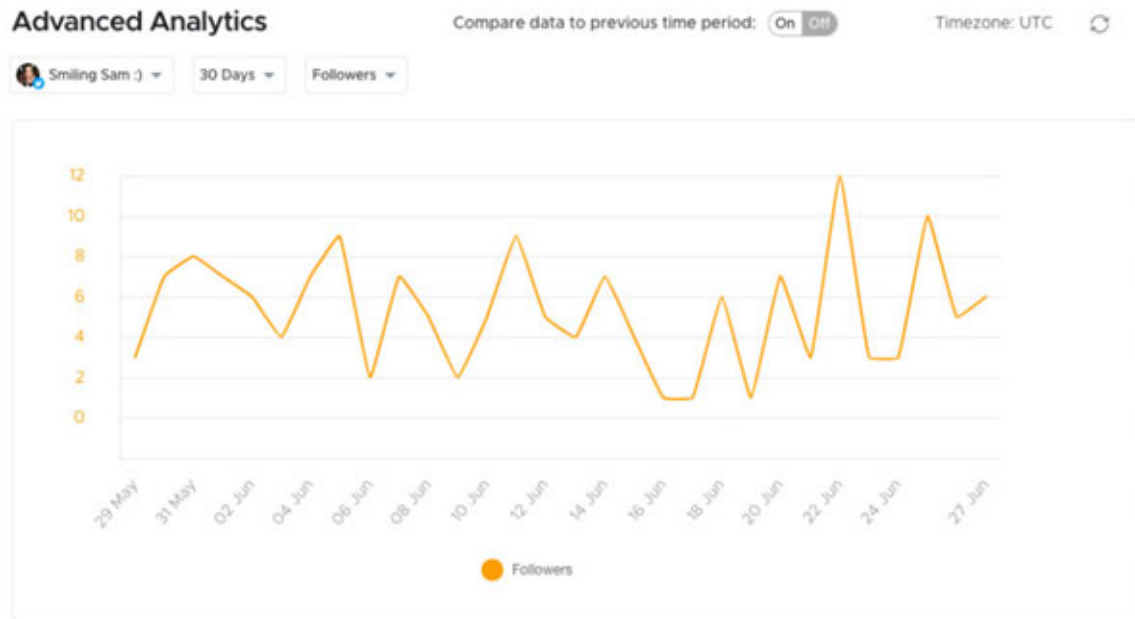

Figure 11.1: A screenshot of advanced analytics¹

You may use social media statistics to get a sense of how the organization and the content are perceived by others. As a result, they provide you with a clear picture of your investment in such an ever-changing medium.

Cloudfire social media tool

Cloudfire is a social media management tool that helps in scheduling the contents and managing all of your social media accounts. Remember that the goal of social media marketing is to build awareness of the brand, your business, and its goods or services. Ideally, you want visitors to notice your social media updates and afterward click on your site.

Achieving your aim of drawing in clients with social media analytics will help you determine if you are on the right track.²

Cloudfire performs the following functions for scheduling and managing your social media accounts, as illustrated in [figure 11.2](#):

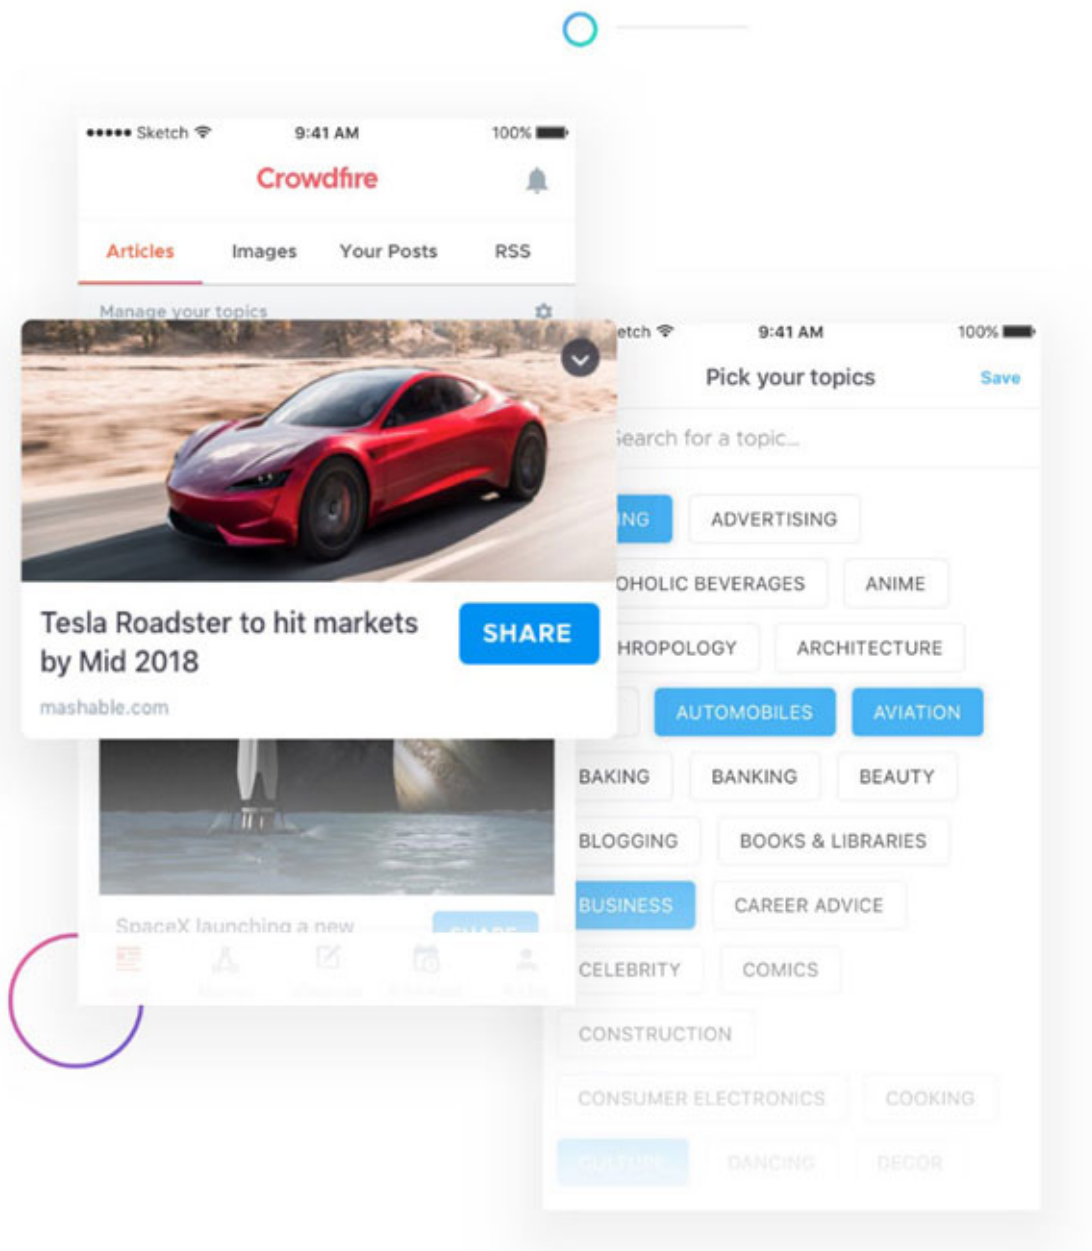

Figure 11.2: Cloudfire discovering relevant content³

- Automatically discover relevant articles and images based on the interests of your audiences.
- Creates and publishes beautiful content on your social media profiles.
- Automatically schedule and publish the content at the appropriate time.
- Customize and tailor your posts according to the social media platform.

Types of metrics

There is a plethora of metrics available for the collection of useful information, some of which go into great detail. In order to evaluate the effectiveness of your social media posts, you should look at the following three key performance indicators. For the time being, let us focus on the measures that are relevant to everyone.

- **Reach**

How many people really view your material is what we mean when we talk about reach. Having an idea of how far your material has spread and how large your audience is might help you improve your marketing efforts.

- **Impressions**

How often your material is shown to a viewer is known as the “*total impressions*” metric. Whether or if a user clicks on your material is what determines your ranking.

- **Engagement**

Engagement is perhaps the most critical of such three measures. Engaging your audience is the ultimate purpose of your material, so think of it that way. Having a high level of user involvement shows you that your material is being taken advantage of. And they will be more inclined to visit your website, blog, and product page as a result.

Google Analytics

Google Analytics is a cloud-based analytics application that monitors and reports website traffic. It is the most widely used Web analytics service over the internet.⁴ An overview of the reports and metrics you are most interested in is provided by dashboards. For instance, dashboards allow you to assess the health of individual accounts or identify similarities between multiple data in a single glance. [*Figure 11.3*](#) shows what a Google Analytics dashboard looks like:

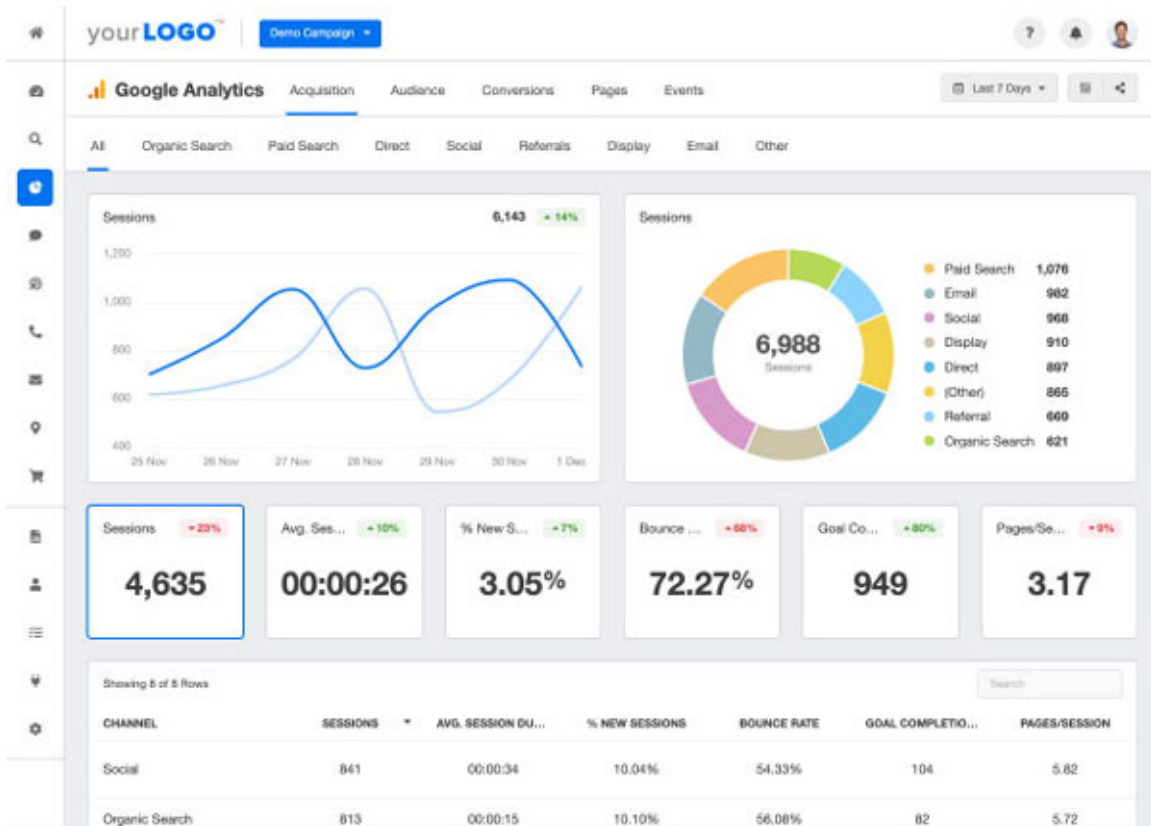

Figure 11.3: Google analytical dashboard⁵

Analyzing your website's traffic with the aid of Google Analytics gives you a clear picture of who your audience is and what they want. To keep people coming back, it provides practical information on how they locate and use your site. This is what Google Analytics does:

- Understanding to what extent your website is popular and how many people visit your site on a given day.
- The number of pages a person views during a single visit to your website—the average number of pages seen each session—and how interested they are.
- A person's time spent online link's bounce rate or the percentage of visitors that do not click through or see the video.
- Perusing the website for a certain period of time.
- In terms of traffic, what are the most and also least attractive Web pages—namely, the landing and departure pages?
- Who accesses the website—user's geolocation (state, city, and country), the language they speak, their browser, and the screen resolution of their

device?

- User behavior after they have landed on the website, how long do they remain, which page prompts the most abandonment, and what number of pages do they browse on average?
- You can see how people discovered your website by looking at the date and time they visited it.
- How your website was discovered by the general public (*Google*, *Yahoo*, and *Bing*), social media networks (*Facebook* and *Twitter*), or the link from another website.

Google Analytics' primary features

- Dashboards, reports, and real-time analytics are all included in the package.
- Custom dimensions, goal-flow charts, and custom metrics are some of the advanced features that may be used to create bespoke reports.

Getting started with Google Analytics

You should follow the following steps for setting up Google Analytics:

1. Take a look at the Google Analytics webpage. In the browser, type in **google.com/analytics/** and press *Enter*. The **Analytics** button is located at the top-right of Web page. A new page shall open up that explains the basics of Analytics. Create an Analytics account by clicking the **sign up** button, as illustrated in *figure 11.4*.

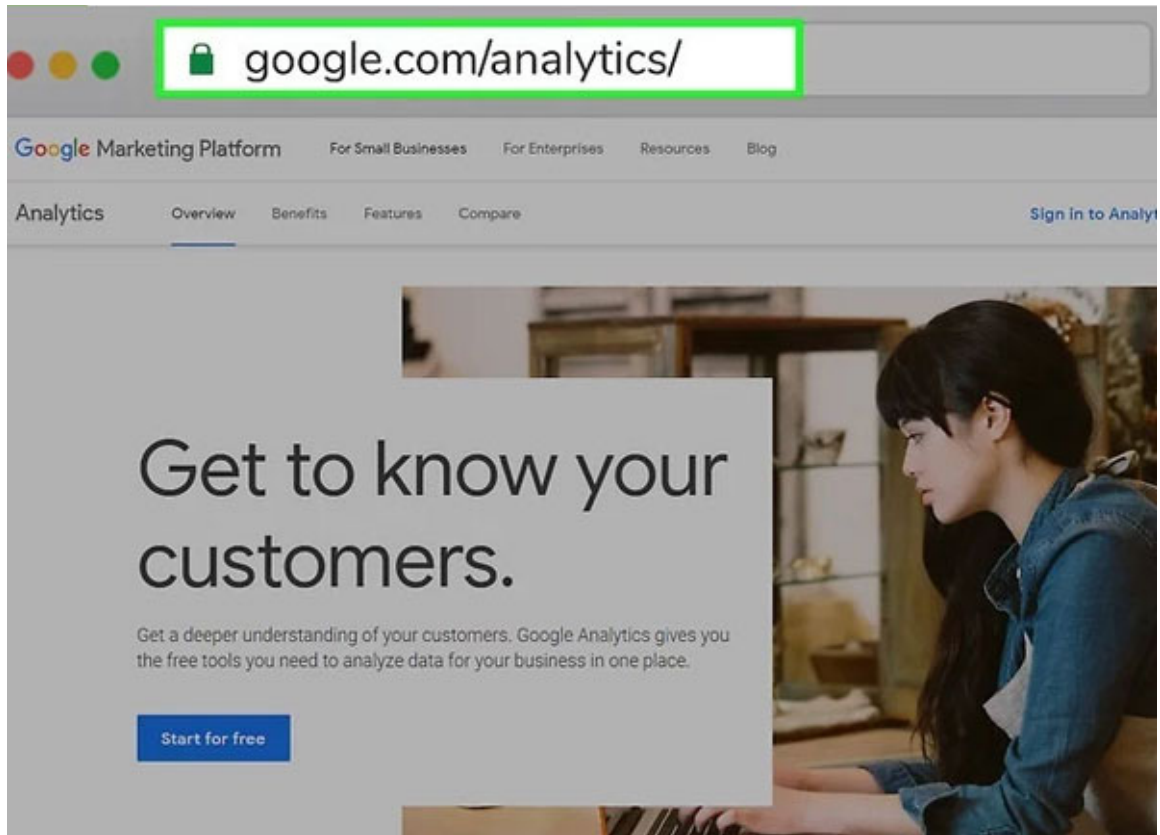

Figure 11.4: Google Analytics Web page⁶

2. The primary Google Analytics dashboard will be displayed. Your website's account and view should match. [Figure 11.5](#) shows the main panel of Google Analytics:

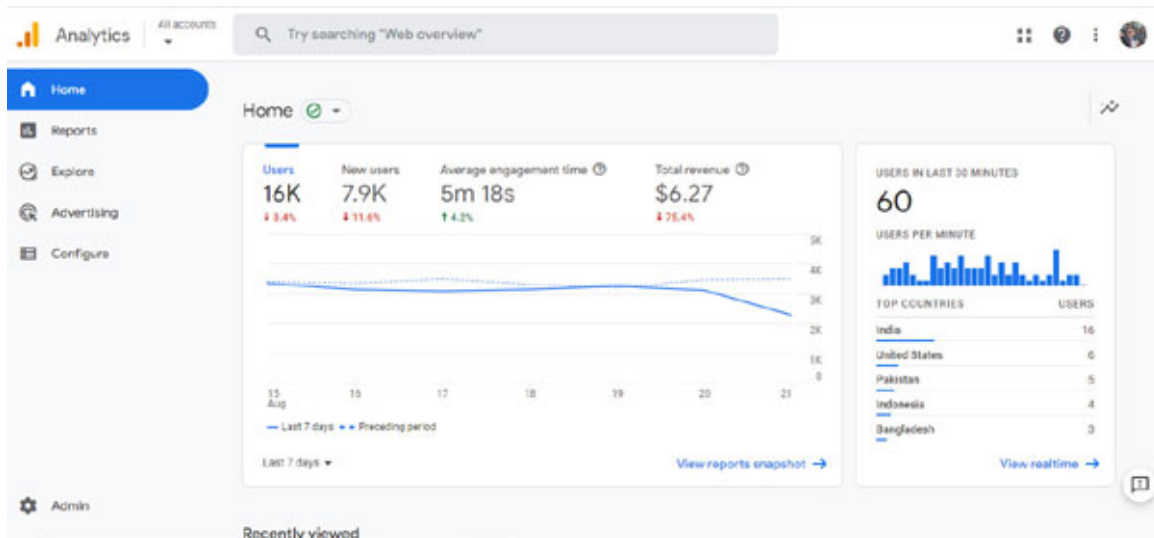

Figure 11.5: Google analytical main panel

3. If you see and hear anything like [figure 11.6](#), it means you have gained access to Google Analytics:

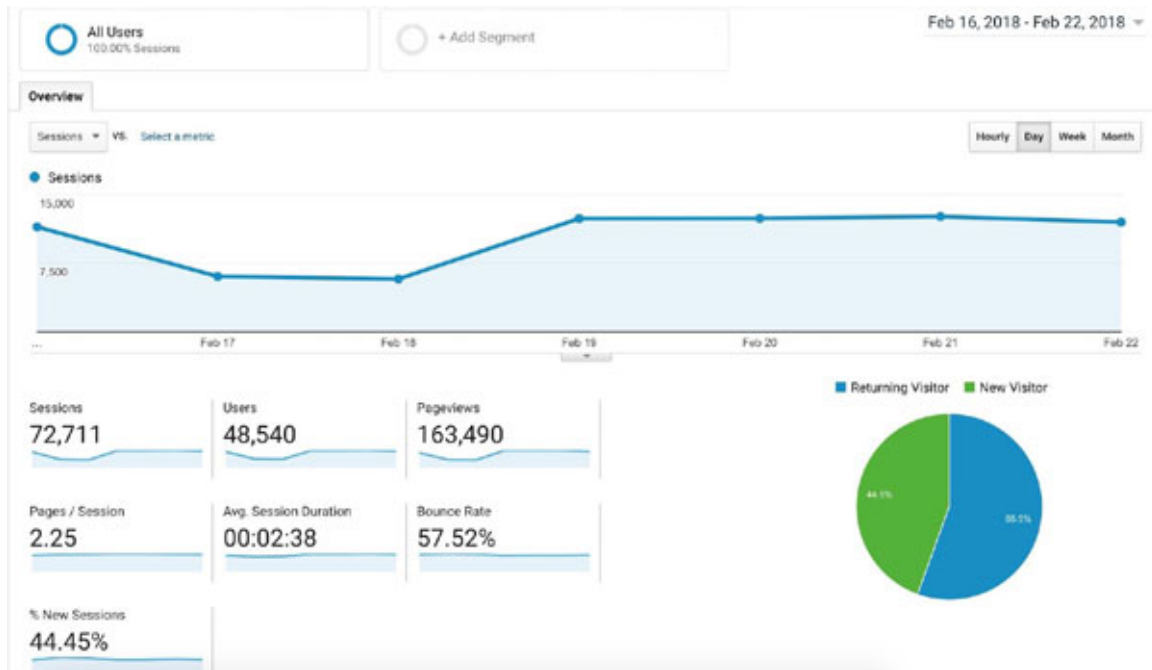

Figure 11.6: Audience overview page⁷

4. Add a bookmark (*Ctrl+D* at the same time) to the page you want to visit. Make a note of it in your browser's bookmarks bar. "Google Analytics" should be entered in the name box. Google Analytics may be found in your bookmarks by opening a new window in the browser. Move it into view by clicking and dragging it (the next time you click over a bookmark, you will access Google Analytics).

[Google Analytics interface](#)

Google Analytics performs by recording the data of a website and presenting it in the form of tables, charts, and graphs, as shown in [figure 11.7](#):

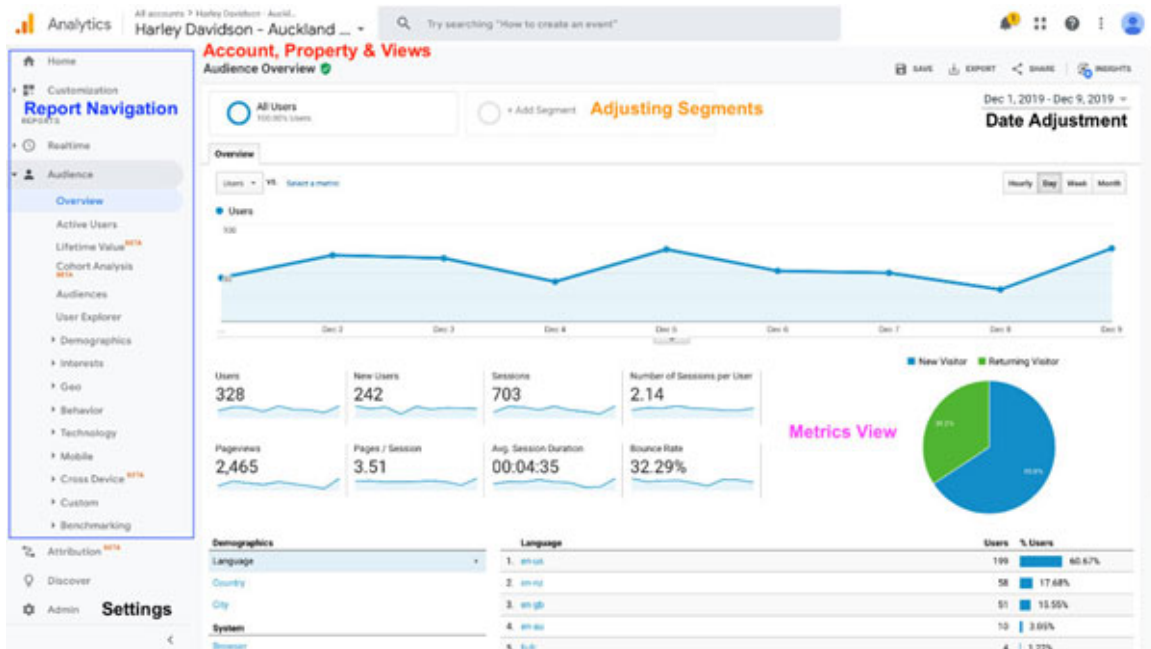

Figure 11.7: Google Analytical interface⁸

Google Analytics interface provides the following:

- Dashboards and reports.
- Navigation—reporting, home, customization, and admin—is available.
- You will pick the time period you want to analyze.
- Data and reports are seen in the main view.

Date range in Google Analytics

In order to choose a date range, click on the date range picker in the upper right corner of any page. Google Analytics displays data from the past 30 days. The date range selection may be opened by clicking the arrow adjacent to the current date range. To make a change to the report, click **Apply** after selecting a new date range.⁹ [Figure 11.8](#) illustrates the date menu in Google Analytics:

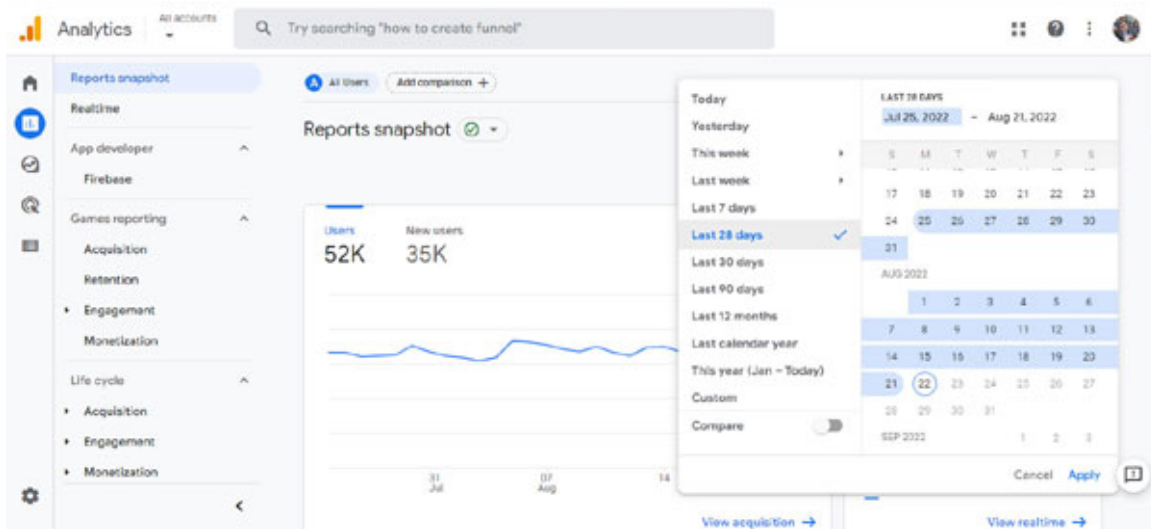

Figure 11.8: Date range menu in google analytics

Choose one of the following options from the date range menu to use a specified time frame:

- **Custom:** Data for the date period you provide.
- **Today:** Data up to the moment of your selections for the current calendar date.
- **Yesterday:** The preceding calendar month's data.
- **Last Week:** Data for the prior week's Sunday via Saturday.
- **Last Month:** Data from first to last day of the prior month.

Google AdWords

Businesses may use Google AdWords to advertise to clients all around the world and expand their operations. Advertisers pay Google to target consumers depending on the country, keyword search, and device type and send their adverts to users who are interested in their goods or services via the pay-per-click network.

The pay-per-click advertising network, Google AdWords, enables marketers to show their adverts on Google's search results page. Businesses pay to have their advertising appear at the top of the search results page, depending on the keywords they wish to target. **Pay-per-click (PPC)** advertising means that you only pay whenever the visitor hits your ad on the platform.

It is like a bidding war in the Google AdWords markets. The highest bidder does not always win, of course. To guarantee that consumers who click on the

advertisements have the greatest possible experience, Google also examines the quality score.

Google ad is the largest online advertising network owned and operated by Google. It follows pay-per-click advertising. Marketers prefer Google ads over other platforms as it delivers the highest **Return on Advertisement Spent (ROAS)**, as shown in [figure 11.9](#):

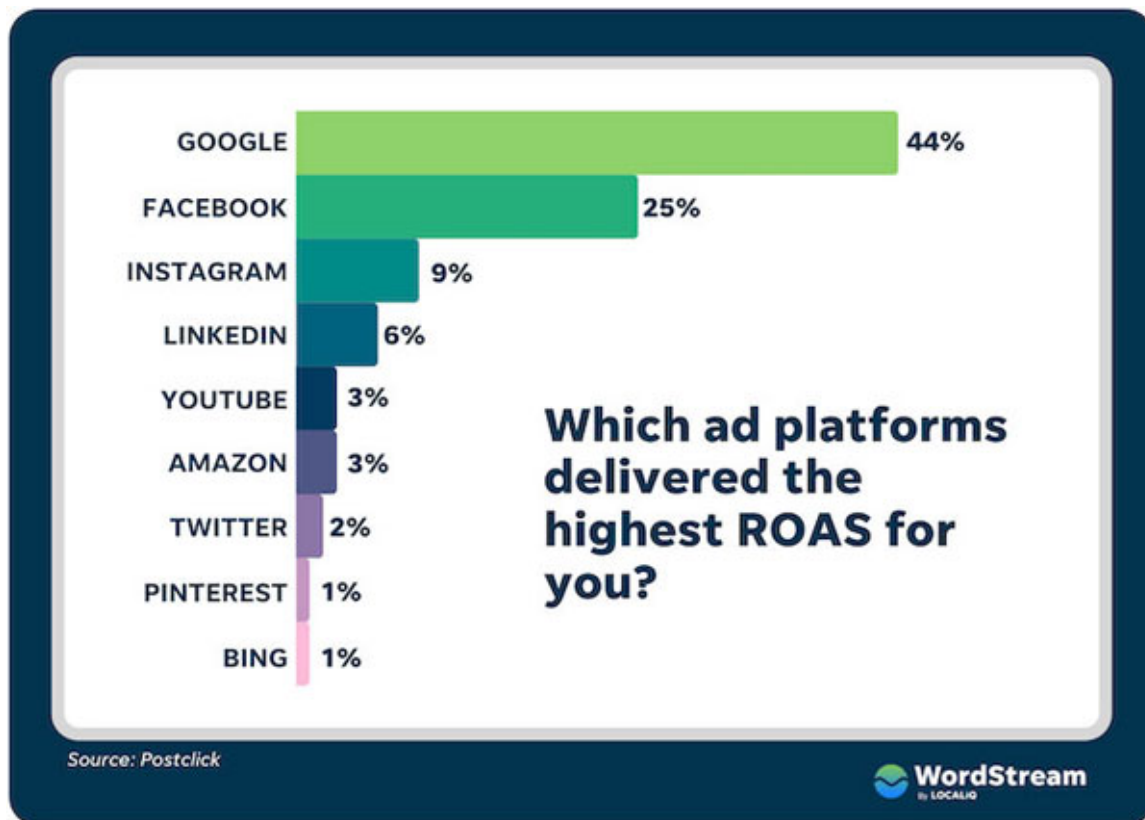

Figure 11.9: Comparative ROAS¹⁰

Types of Google Ads campaigns

Google offers five different types of ad campaigns you may choose from, as per your requirements.

Search Ads

Search ads are the most commonly used text ads that are displayed on SERPs as a result of searches made on Google by the users. [Figure 11.10](#) shows an example of a search for a “course on digital marketing” returns sponsored results:

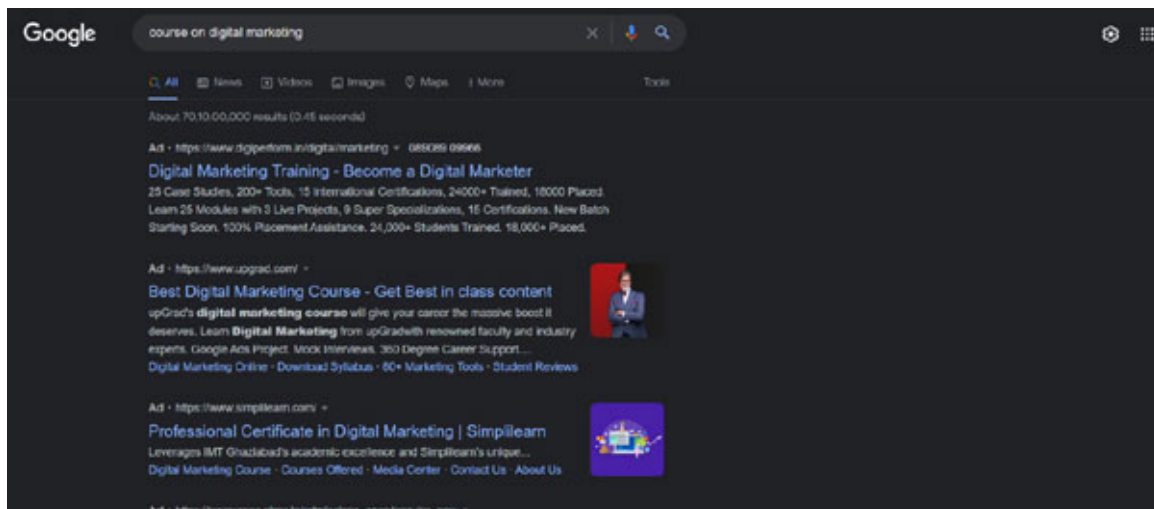

Figure 11.10: SERP showing search ads

You should use search ads for promoting your brand if your advertising budget is small and you are promoting a brand that offers something that is required on a when-needed basis. (For example, carpenter, plumber, and so on.)

Display ads

Google offers to advertise on websites that are part of the display network (GDN). The display network is a collection of websites, blogs, and YouTube. It has the potential to reach a large number of audiences. [Figure 11.11](#) compares the display ads with search ads:

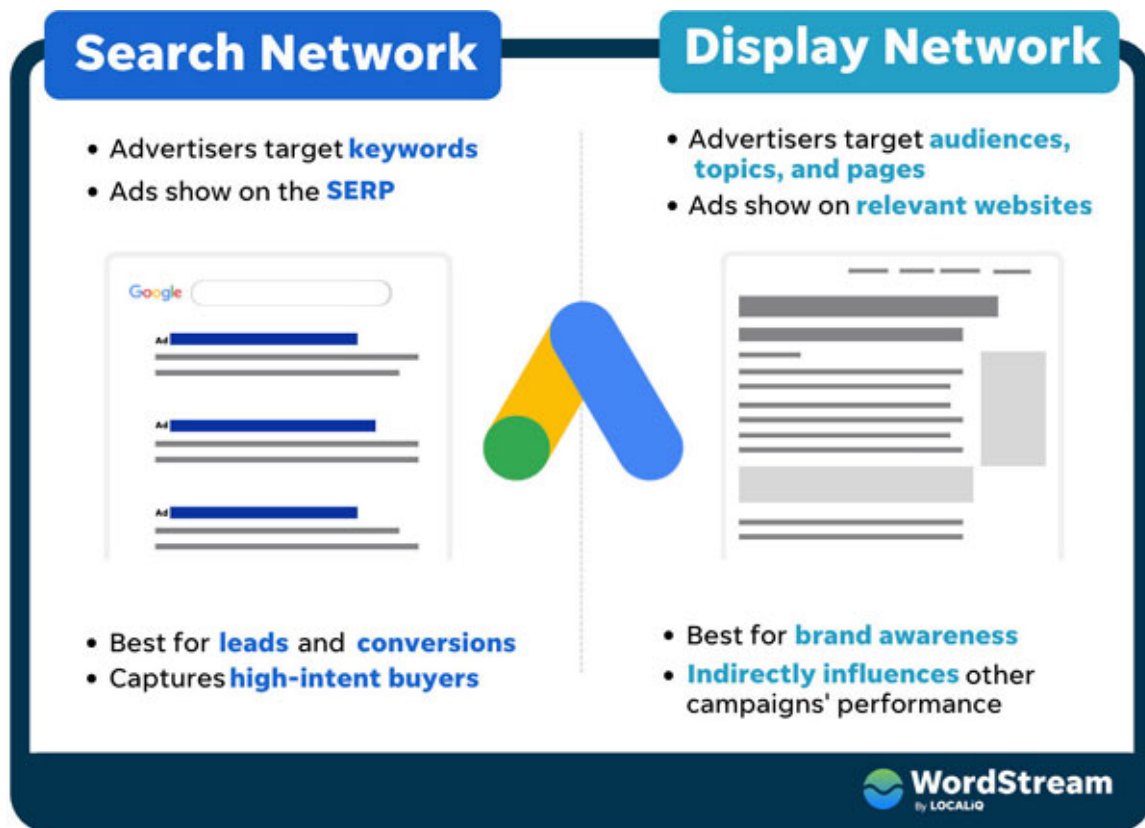

Figure 11.11: Search ads versus display ads¹¹

You should run a display ad campaign if you want your audiences to get familiarized with your brand. The benefit of using this type of ad campaign is that your contents are displayed in front of your target audiences.

Video ads

Google ads offer to create a video ad that will appear as a YouTube search. This type of ad can be used to grab the attention of the user in the middle of some other video. [Figure 11.12](#) shows a Doritos video ad appears in starting or middle of a video:

Figure 11.12: Video ad

Shopping ads

Shopping ads are displayed on SERPs and include product details such as price and image of the product. A person can directly buy from these ads by just clicking on them. [Figure 11.13](#) shows an example of shopping ads on SERP:

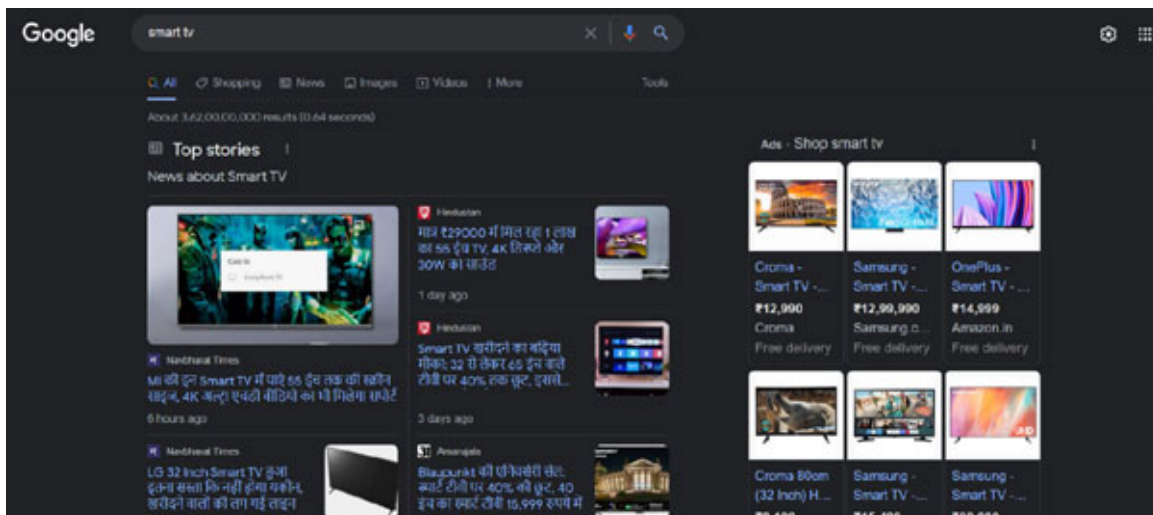

Figure 11.13: Shopping ad

Each type of ad campaign has a different objective and offers a set of benefits. [Figure 11.14](#) differentiate the four types of Google Ads:

Figure 11.14: Shopping ad¹²

Google Ads best practices

Regardless of the size of your company, Google Ads may be an effective marketing tool for you. It is a low-cost method of advertising which may be used to target qualified and interested customers.

- Google Ads may be a powerful tool for your business if you understand the ins and outs of the ad platform and how to use it effectively.
- Determine how much money you have available to spend on every campaign, and establish the daily budget appropriately.
- Aim for more relevant clicks by researching and bidding on phrases and precise keywords. You should avoid broader keywords. If your keywords are lengthy or too broad, then your ads may be placed in front of the wrong audiences. This may result in a smaller number of clicks and a lower ROAS.
- Ensure that your advertisements are relevant and interesting enough to persuade your audience to click on them.

- You should optimize your landing page to enhance the user's experience. Run A/B testing on different versions of the landing pages to see which ones perform best.
- Try retargeting to strengthen the brand identity.

Data collection for Web analytics

Log-file analysis and page tagging are indeed the two most used methods of gathering Web analytics data at the moment.

It is possible to examine the server's log files in order to get insight into how users interact with the system. Log files on Web servers have indeed been there for years; thus, the program is able to analyze data that has always been accessible. Each time a user makes a request, the new line is added to the log file. The new line would be written whenever you click on the link, make an Ajax call, or fill out a form.¹³

(“AJAX calls are one method to load personalized content separately from the rest of the HTML document, which allows for the full HTML document to be cached, improving backend load time.”)

When using third-party servers for page tagging, you may generate statistics on pages you have tagged. Page tags are generated by the browser's JavaScript code, which interacts with the tracking program.

Tracking e-mail campaigns may be done via pixel tracking. In this e-mail, a small, translucent pixel is inserted. When you click on the photos in the e-mail, a small tracking pixel will also be loaded.

Log-file analysis

You must be familiar with the following when it comes to log-file analysis:

- For the most part, log files generated by the Web servers are freely accessible. Website modifications are required to implement page tagging.
- Log files are extremely precise—every click is recorded. Inaccurate page tagging may be a problem, and there is no way to collect data if the browser does not support JavaScript, for instance.
- Using a uniform log-file format, it is feasible to swap suppliers but also still evaluate past data. As every vendor's page tagging is unique, moving

vendors may result in the loss of previously collected data.

- When a search engine spider makes a visit to a site, the log files keep track of that information.
- Page tagging simply displays successful queries, whereas log files keep track of errors.

Page tagging

You should be aware of the following when it comes to page tagging:

- Capturing additional data is easy with JavaScript (for example, items bought or the browser screen size). In order to get this data, you will need to alter the URLs of the log files.
- Pages could report on occurrences that the log-file analysis cannot, like user interactions with the Flash movies.
- As long as you do not have a Web server, page tagging may be used by businesses.
- It is common for page-tagging service providers to give more help. As a third-party service, it does not have the same level of control as the log-file analysis tools.

The raw data generated by these two services would be different as a result of the varied ways in which they gather data. Both methods may be used to examine the website at the same time. Although the raw numbers do not match, this should not be an issue. In order to gauge the success of your e-Marketing initiatives, you must analyze these numbers.

For the vast majority of online marketing efforts, website analytics tools may be used to track the success of the campaign. Every campaign that is running on a website must be considered while doing the website analysis. High traffic levels may be generated through different e-Marketing strategies such as SEO, PPC, and e-mail marketing, but this might be a waste of money if your visitors are not completing any of your site's objectives when they arrive. The goal of conversion optimization is to bring in as many clients as possible from a website's visits.

Multi-channel attribution

The technique of monitoring marketing channels that lead to conversions or sales is known as multi-channel attribution or multi-touch attribution. Marketers may assign a monetary value to every marketing channel depending on how much it contributes to the overall sales process.

Multi-channel attribution gives marketers a clear picture of how their campaign is doing at every stage of the customer journey. With the aid of multi-channel attribution, you can figure out which marketing channels are most effective at producing high-quality leads and, as a result, better manage your money.

Different multi-channel attribution models

Marketers have been able to follow and analyze their clients better as they go through the sales funnel. [*Figure 11.15*](#) shows the use of the multi-channel attribution model:

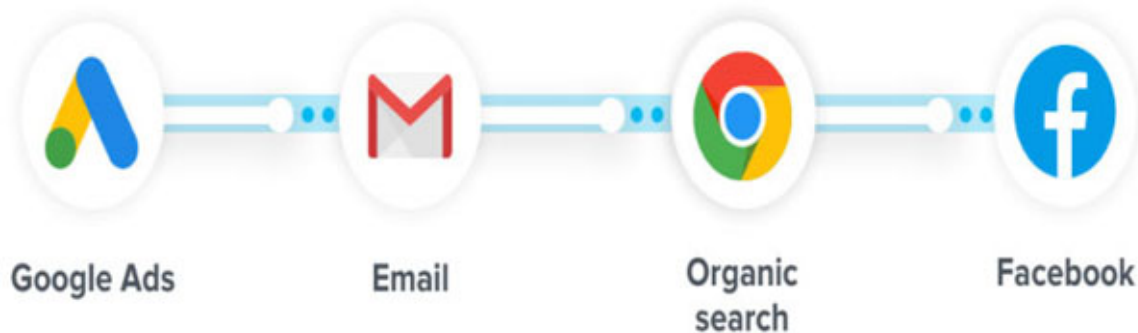

Figure 11.15: Multi-channel attribution¹⁴

Your users' interactions with the marketing channels before they convert may be reliably tracked using the marketing attribution models as given follows:

1. An unidentified visitor downloads the eBook from the website after clicking on the Google ad.
2. The lead returns to your website to learn more about your products and services after going through the e-mail cadence and clicking on a link.
3. They come back to the website two weeks later using the Google organic brand search.
4. The meeting with sales staff is set up shortly after consumers click on a Facebook retargeting ad.

Single-touch attribution models

One campaign or channel gets all the credit in the single-touch models. The visitor's first or final interaction with the channel is often assigned the conversion value in such attribution models.

First-click attribution

The first channel a buyer interacts with is responsible for all of the credit for the conversion. It is clear from our instance which Google ad that spurred this customer's trip was responsible for all of the conversions, as illustrated in [figure 11.16](#).

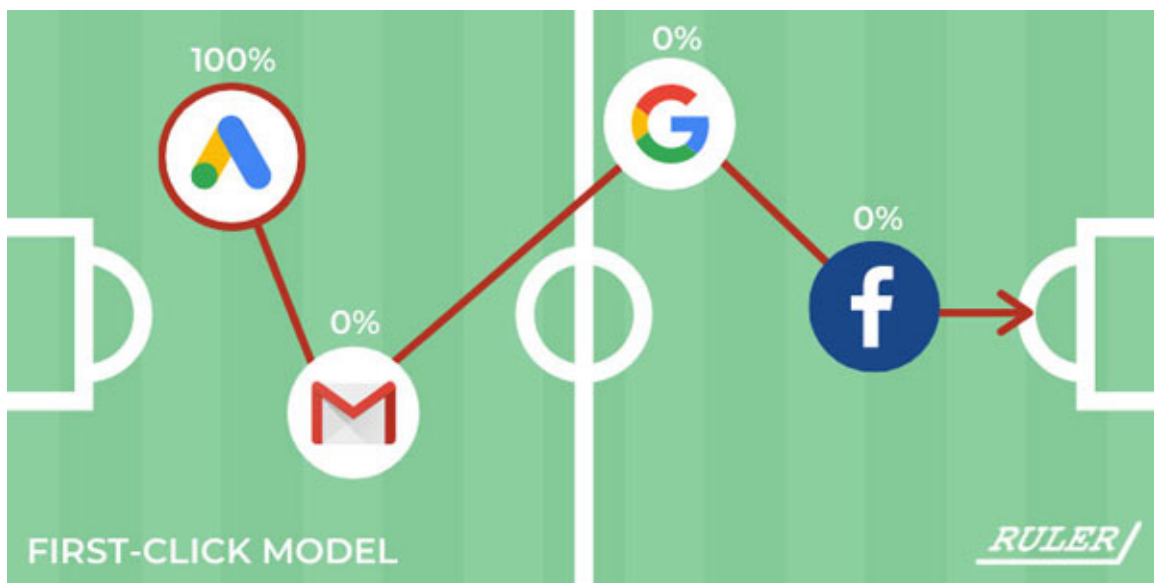

Figure 11.16: First-click attribution¹⁵

Last-click attribution

The last channel a buyer interacts with is responsible for all of the credit for the conversion. It is clear from our instance that the Facebook ad that spurred this customer's trip was responsible for all of the conversions, as illustrated in [figure 11.17](#):

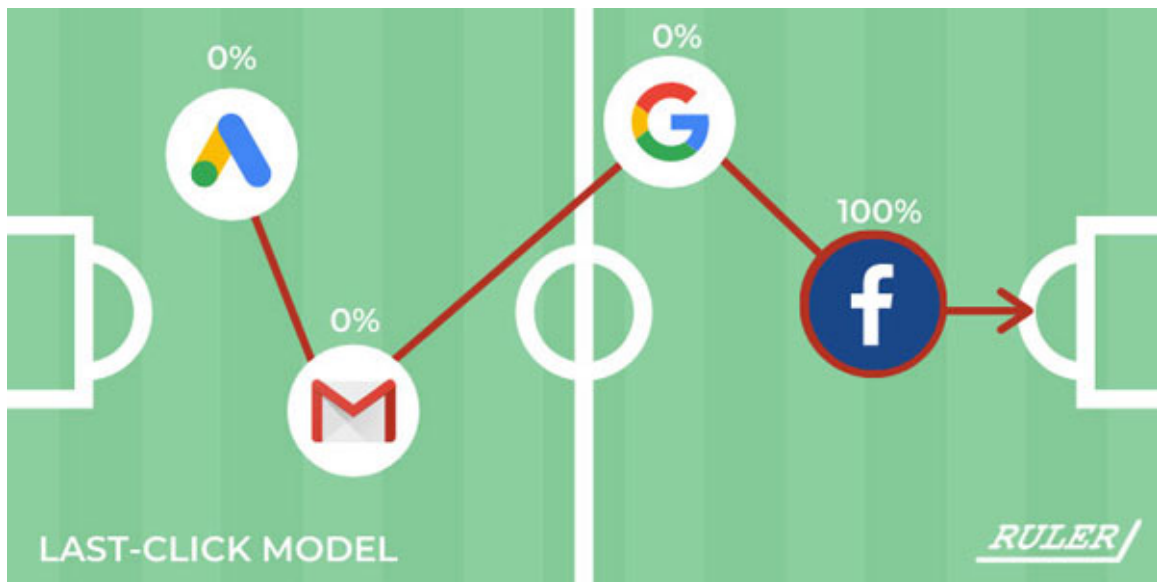

Figure 11.17: Last-click attribution¹⁶

A retargeting ad on Facebook has been given the whole credit in the previous example under a last-click model.

Last non-direct click

We will need to update the sales journey instance in order to demonstrate this attribution approach. The final channel with which the buyer engaged is given all credit for the conversion, disregarding any direct website visits that were part of the process, as shown in [figure 11.18](#).

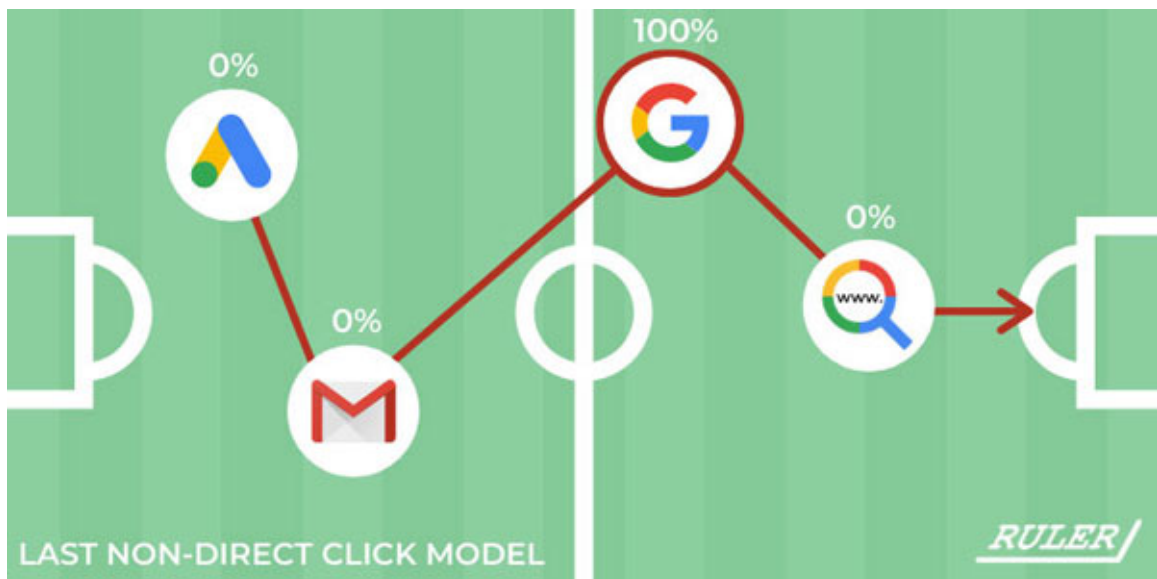

Figure 11.18: Last non-direct click¹⁷

Using the instance, the very last non-direct click model granted 100% credit to an organic visit and excluded direct touchpoints.

Multi-touch attribution models

Using multi-touch attribution, marketers can understand a customer's journey better. With this model, marketers can understand how numerous touchpoints in a customer's journey works together to generate leads and convert them into customers.

Linear attribution model

In the linear attribution model, the credits for the buyer's conversion are equally spread across all of the channels they used throughout the purchase process, as illustrated in [figure 11.19](#):

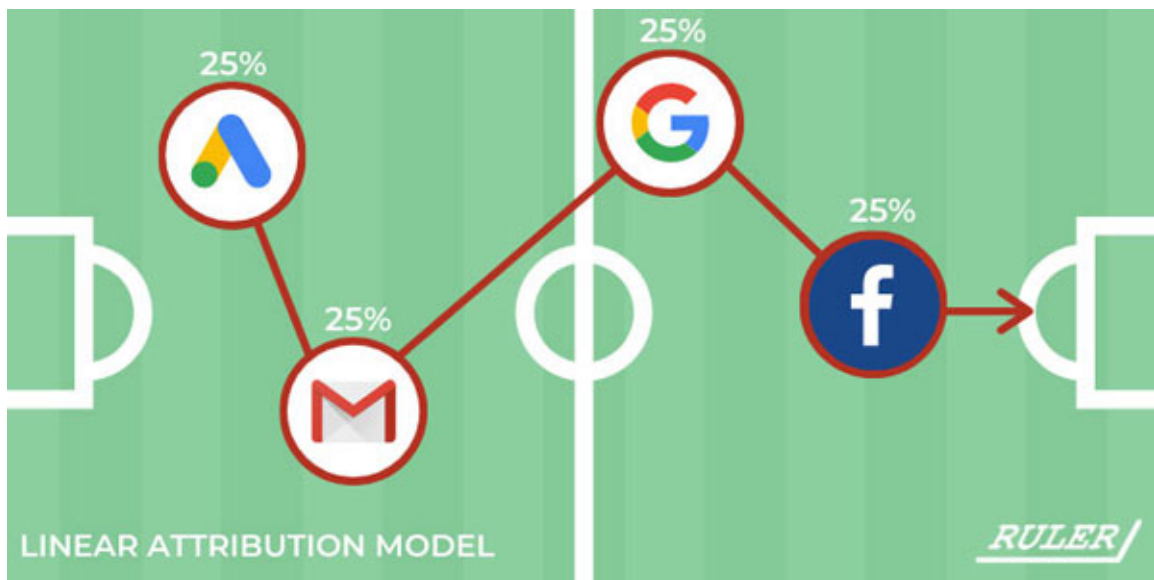

Figure 11.19: Linear attribution model¹⁸

In our case, the linear attribution model will split the whole credit from sale evenly throughout the whole conversion route.

Time decay multi-channel attribution model

All the marketing touchpoints share in the sales revenue, but perhaps the latest touchpoints get the biggest cut. The time decay multi-channel attribution model can be seen in [figure 11.20](#):

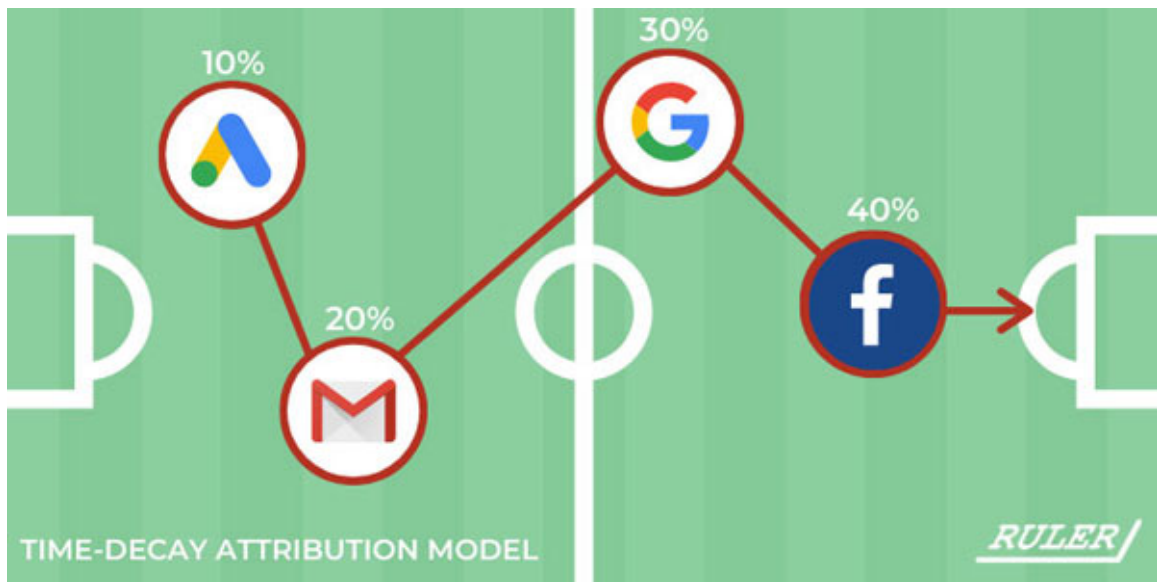

Figure 11.20: Time decay multi-channel attribution model¹⁹

Using a time decay model, we can see that the Facebook ad and organic search are given more credit than other touchpoints in our hypothetical scenario.

Position-based attribution model (U-shaped)

The first and final touchpoints are credited with 40% of the success of a sale. The remaining 20% of the total of the trip is equally distributed among all touchpoints inside the middle.²⁰

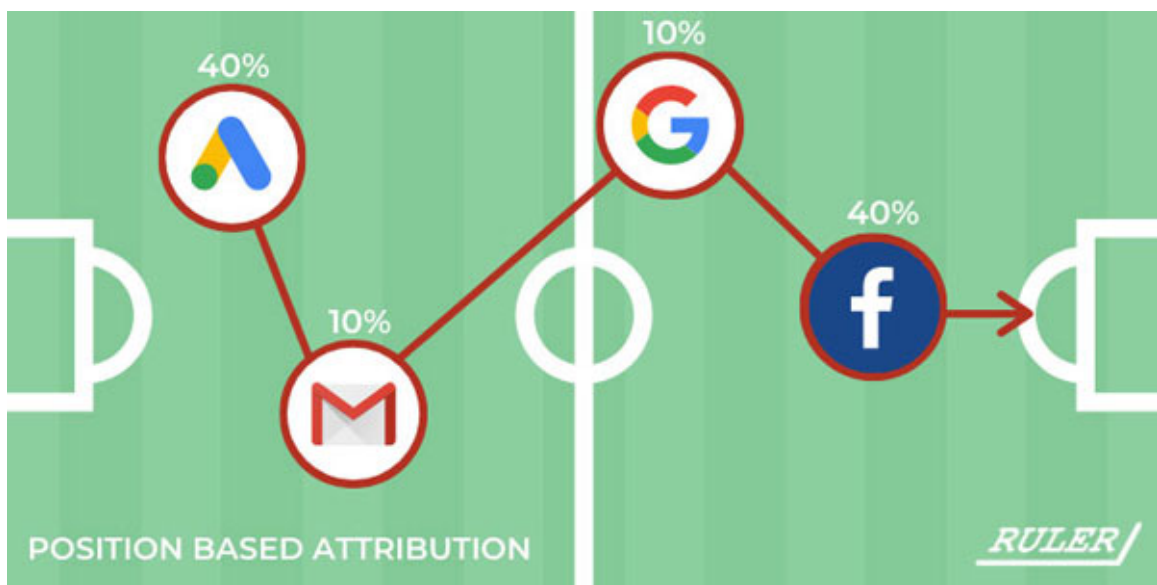

Figure 11.21: Position-based attribution model (U-shaped)²¹

There is a 40% credit given to Google and Facebook ads in this strategy. The remaining 60% of the credit goes to the remaining touchpoints, as illustrated in [*figure 11.21*](#).²²

There is no single attribution model that works for all businesses. Every one of such attribution models would provide distinct results since they weight touchpoints in various ways. There are a wide variety of attribution models to select from depending on which channels and campaigns are being tracked.

Universal Analytics

The latest standards for data collection and Web traffic analysis have been defined by the new version of Google Analytics, known as Universal Analytics. Universal Analytics includes new tracking codes for the websites and additional tools that help evaluate user activity better. All users can access both Google Analytics and Universal Analytics.

With the exception of a more in-depth look at how users behave, Universal Analytics provides identical data to consumers as does Google Analytics:

User ID

In Google Analytics, a single person that accesses a website from numerous browsers and devices would seem to be several individuals. UA's introduction of the user ID made it possible to attribute all activity to a single user. Businesses could now precisely count their users, monitor signed-in user experience, and also get Cross Device data with more ease.

Tracking code

Users may now monitor visits to their websites with the three new tracking codes from UA:

- Analytics.js—you can see how the website's visitors are interacting with it.
- Google Analytics SDKs—use the Google Analytics Software Development Kits.
- Measurement Protocol—In order to get data from external devices, such as gaming consoles, Measurement Protocol is used.

Tracking code

In the HTML source code of the website, a short bit of JavaScript is used to incorporate tracking codes. Webmasters, advertisers, and marketers may use such lines of code to track how many people are visiting their websites and what they are doing while they are there. Conversion tracking and attribution need tracking codes as the pre-requisite. The privacy policy would have to be changed if the correct codes are being used. For example, tracking codes are not to be mistaken with the URL tracking parameters. [Figure 11.22](#) shows the tracking Id and tracking code:

ga('create', 'UA-1228911-36', 'auto');
ga('send', 'pageview');

</script>
```

Figure 11.22: Tracking code

Functions of a tracking code

Strings of numbers and letters make up tracking codes. To use them, you need to produce them first and also then enter them into the page's code. Whenever a website is accessed, JavaScript code is often used to do this. Sending information like IP address, URLs visited, and time spent on a site to the server or application used for the analysis. In most cases, the tracking code is included in the page's source code in a head section.

Using the right Web analytics tools, the tracking code may do additional purposes, such as:

- Tracking of events
- Keeping track of the reading depth
- Using heat maps to capture visitors' attention
- Analysis of the data from e-commerce
- Ads-based click-through rate management
- Tracking of the campaign

Conclusion

One can use social media stats to get a sense of how the organization and the content are perceived by others. There are a variety of metrics that may be used to gather meaningful data. Monitoring and reporting website traffic is done through Google Analytics, a cloud-based analytics tool; you may get a good image of your audience and what they want by analyzing your website's traffic.

Dashboards, reports, and real-time analytics for customizing reports are the main features of Google Analytics. Open a new browser tab and search for "*Google Analytics*" in your favorites. By using dashboards, you may get a quick overview of the reports and analytics you care about most. After choosing the new date range, click **Apply** to update the report. Google AdWords is a pay-per-click advertising network that allows businesses to display their ads on Google's search results page.

Businesses pay to have their ads show at the top of the search results for certain keywords. Low-cost advertising might well be used to reach qualified and interested clients.

In the upcoming chapter, you will be able to learn the modern-day digital marketing channels such as virtual and augmented reality. The reader will develop an understanding of the use of artificial intelligence in digital marketing.

Key terms

- **Google Analytics:** The cloud-based analytics application which monitors and reports website traffic.

- **Google Adwords:** Digital advertising platform developed by Google LLC.

Questions

1. Why is analytics important for company performance?
2. What are the benefits of using Web analysis?
3. What are key performance indicators in Web analytics?
4. What are the goals of Web analysis?
5. What do you mean by Google AdWords?
6. Explain log-file analysis.
7. What is universal analytics? Explain in brief.

Class exercise

Create an ad campaign for your organization using Google Adwords.

Use Google Analytics for analyzing the increase in Web traffic by launching the ad designed previously.

CHAPTER 12

Modern Day Digital Marketing

Introduction

This chapter introduces the concept of cross-channel marketing. The use of beacons and chatbots in digital marketing is also explained in this chapter. Further, the benefits and components of **Artificial Intelligence (AI)** are discussed in this chapter.

Structure

In this chapter, we will learn about the following topics:

- Cross-device marketing
- Beacon technology
- Chatbots
- Virtual reality
- Augmented reality
- Customer relationship management
- AI in marketing

Objectives

After reading this chapter, the reader will have a deep insight into the use of technological innovations in digital marketing. The reader will learn about the use of chatbots for customer support services. The reader can learn to choose the best **Customer Relationship Management (CRM)** system. After reading this chapter, the reader will be able to develop an understanding of the role of virtual reality and augmented reality in digital marketing.

In today's modern digital marketing world, there are a plethora of channels to which marketers must attach their brands, but advertising online is far more complicated than the channels themselves. Marketers must go deep within today's huge and complicated cross-channel world to identify tactics that have

an effect via engagement marketing in order to realize the full potential of digital marketing. Marketing via customer engagement is a way to build relationships with new and returning consumers by using the information you have gathered about them over time. Building brand recognition, establishing yourself as the industry thought leader, and putting your firm in front of clients when they are ready to purchase are all possible outcomes of engaging customers in the digital world.

Cross-device marketing

Ads may be targeted to a particular audience across several devices using cross-device targeting. Marketers may use this omnichannel approach to communicate with customers on a variety of devices, including desktops, laptops, smartphones, tablets, and televisions. Creating a multi-device experience is the solution if you want to send tailored consecutive messages to the same user. Using a cross-device view, consumers convert at $1.4\times$ the rate as if you just viewed from a single device view.¹ [Figure 12.1](#) illustrates cross-device marketing:

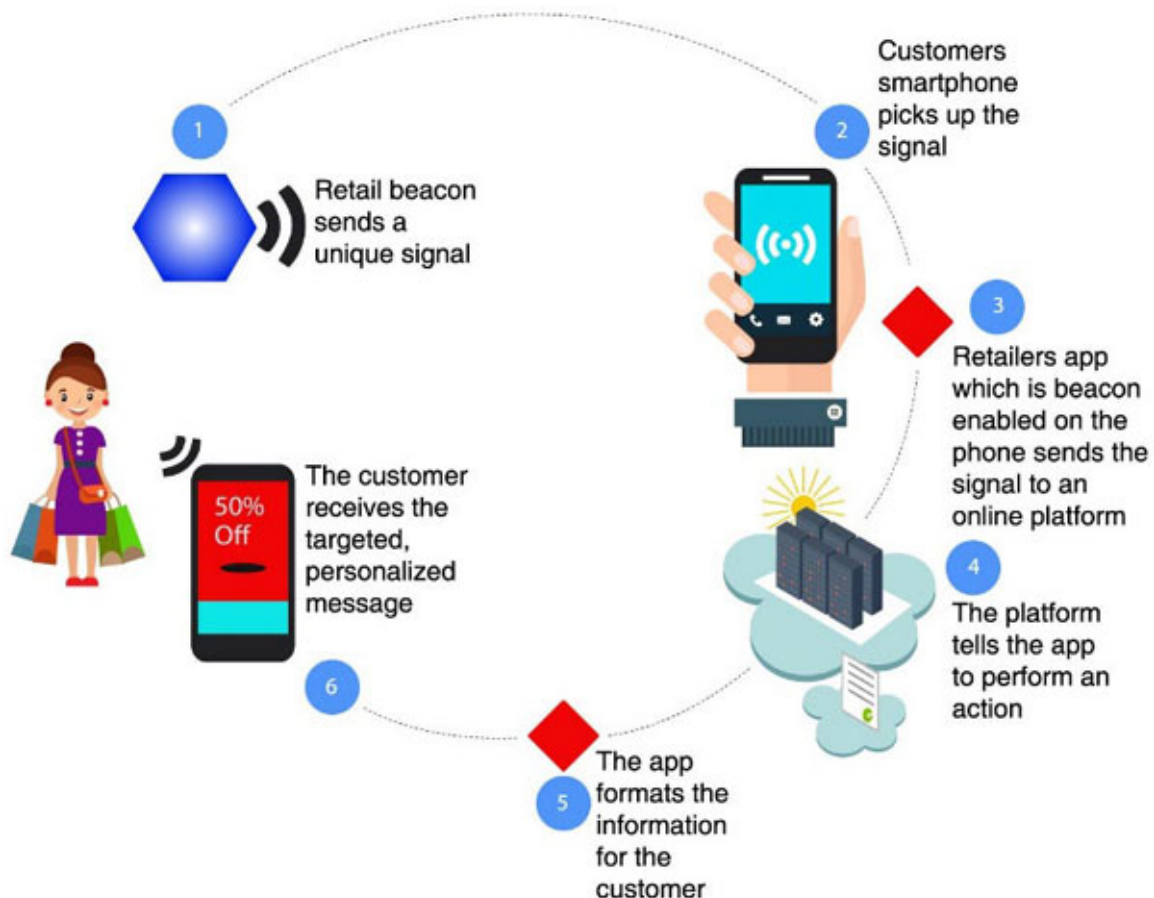

Figure 12.1: Cross-device marketing²

Nowadays, the consumer has access to a number of devices for searching and browsing the internet for online shopping. As per *Marketing Land* (a daily publication that covers all aspects of digital marketing, www.marketingland.com), a digital consumer owns 3.64 connected devices at a time. A customer may see some product on a mobile device and may end up buying the same on a desktop at the office. Therefore, organizations need to prepare a cross-device marketing strategy for understanding the interests and choices of prospective consumers.

Beacon technology

Small, low-power Bluetooth transmitters are known as *beacons* and are used to deliver signals to other neighboring smart devices. In terms of proximity, marketing and location technology, they are one of the most recent innovations around. A simple way to put it is that they help make location-based searches and interactions more efficient and precise.³ [Figure 12.2](#) illustrates the working of beacon technology:

*Figure 12.2: Beacon technology*⁴

Working of beacons

In terms of its design, the beacon is the breeze. Every device has a CPU, radio, and battery, and it broadcasts a unique identity to other devices. An essential location in your surroundings may be identified by the identifier that your device picks up, which is often a cell phone.

In order for your smartphone to identify a beacon, it needs a unique identifying number. When once the *beacon* is linked, it will execute whatever function it has already been set to do. In the next section, we will go into the depth about some of the beacon's various capabilities.

Benefits of beacon technology

Potential uses and applications are many for the technology itself. Certain beacon features were already accessible when they were initially launched, whereas others have emerged as a result of advancements in technology.

Google Ads has improved offline attribution

Connecting beacon's signals to a Google Ads account might provide you with a wealth of information about your searchers' offline activities and sometimes even help you monitor in-store visits. As a result, you might be able to track the amount of people that click on Google search advertisements and then end up in your business.

It's now more crucial than ever to know how much money is being spent online every year by companies and marketers. A marketer's problem has always been figuring out how their internet marketing efforts are tied to offline attribution. In contrast, you may see how successful your digital advertising is at bringing consumers and sales to your business by measuring key interaction points of the individuals who clicked on the ads.

Advanced data gathering

This Bluetooth proximity technology is an advance over previous proximity technologies such as GPS and Wi-Fi, although the precise locational precision of beacons is up to question. You will be able to get a better sense of how and

where your consumers are traveling across your store, thanks to this improved precision.

Combined with the e-commerce statistics, you could use this information to make adjustments and improvements to the product listings and shop layout. The homeware department at the rear of your shop may need to be extended or moved to the front of consumers who are spending most of the time there. Your customers' journeys, marketing initiatives, and conversions might all benefit from this data.

Out-of-store marketing

Anyone who is within the range of a beacon can get crucial information you want them to know about your business. It is possible that this is only an alert to let the user know when they are getting close to your store. Alternatively, the alert might be more involved, such as delivering information linked to your discount programs, loyalty programs, and other contests in which you are participating in. Brands may also use in-store beacons to promote particular product discounts.

Chatbots

Computer programs that replicate and process human interaction are known as chatbots at their most basic level. Chatbots enable people to engage in the same way that they would interact with a real person. There are many different kinds of chatbots, ranging from basic one-liner programs to digital assistants, which learn and adapt as they receive and analyze information and give ever-increasing personalization.

Chatbots have a significant impact on a company's development. They help to improve the customer experience by streamlining interactions between your services and your audience. The most cost-effective way to provide customer service is via the use of a chatbot. You may reduce the cost of customer care while improving customer involvement and operational efficiency with the chatbot.

Using chatbots, users may get answers to their questions quickly and easily. Consumers are able to keep a record of their interactions with the bot using these tools. [*Figure 12.3*](#) shows the use of a chatbot for booking a seat for an event:

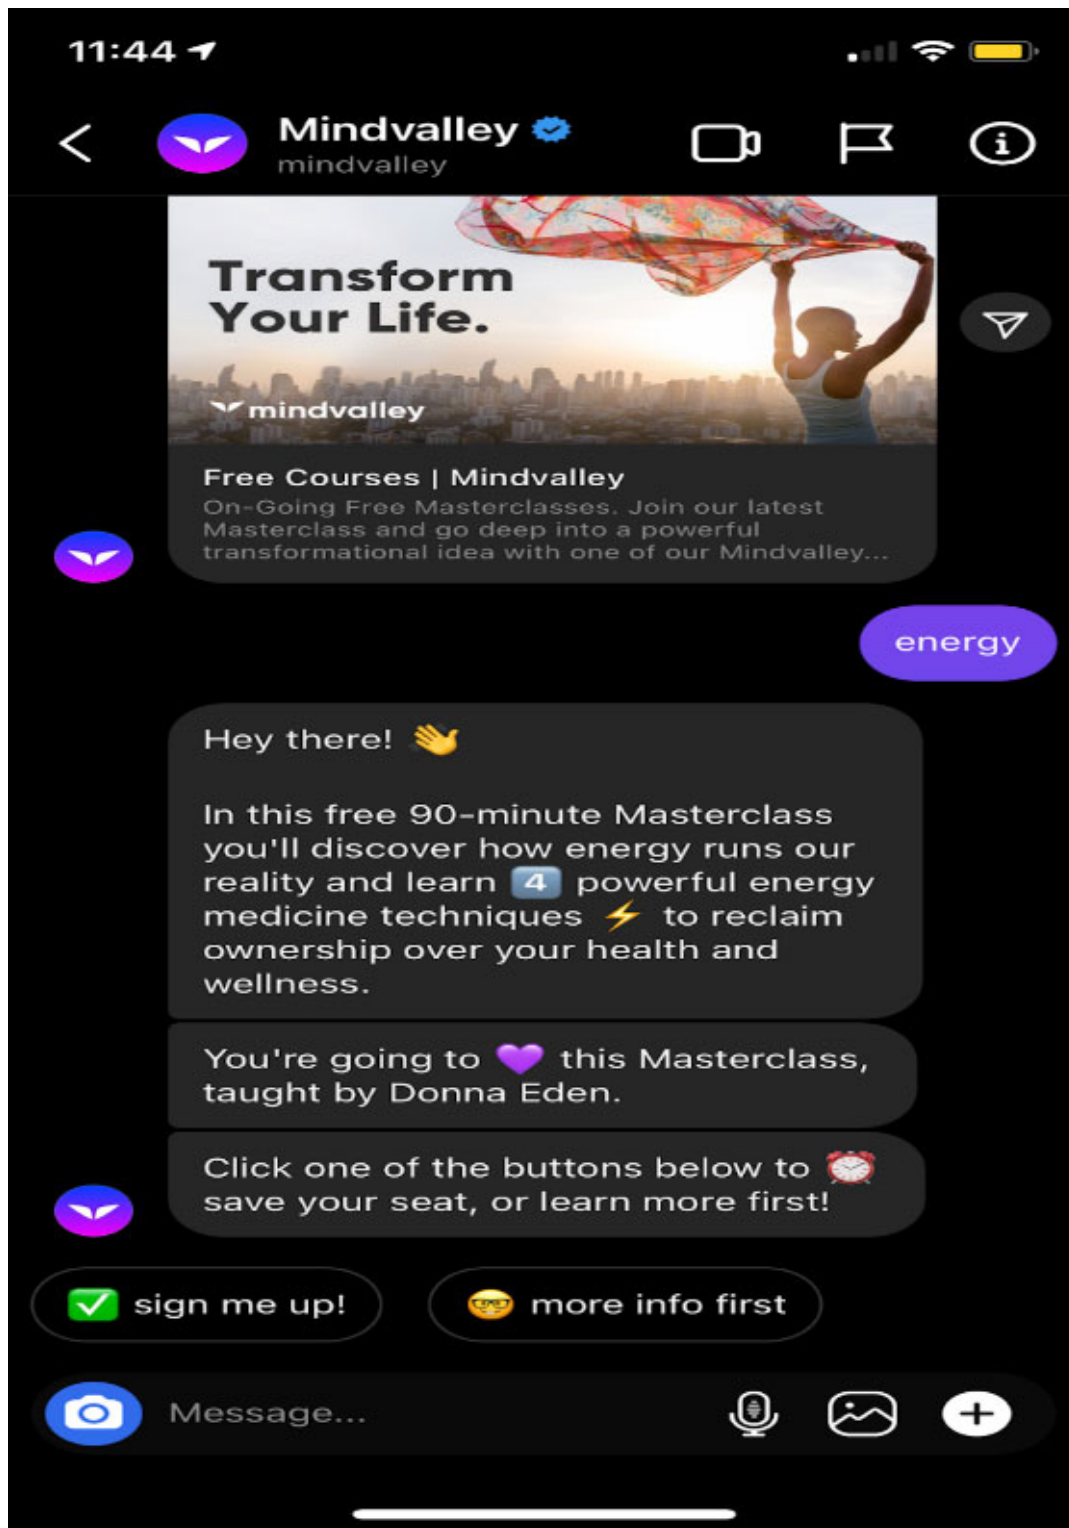

Figure 12.3: Mindvalley as an example of chatbots⁵

Chatbots are of two types: rule-based chatbots and AI chatbots.

- A **rule-based chatbot** is a program that makes use of If/Else logic for answering the queries of the customers. It works in predefined situations.
- The **AI chatbots** have the capability of self-learning with the help of speech recognition, **Natural Language Processing (NLP)**, and so on.

Benefits of chatbots

The following are the benefits one can achieve by using chatbots:

- **Reducing the cost:** The use of chatbots in place of customer assistants will reduce the cost for your company as chatbots will work faster and more efficiently.
- **Automation of business process:** Chatbots are capable of collecting data and providing a better experience to the user by using the organization's resources optimally.
- **Engaging more customers:** Chatbots can engage with more customers by processing a large number of queries simultaneously.
- **Personalized communication:** Consumers receive personalized answers to their requests, which helps in increasing their satisfaction level.
- **Generation of leads:** Leads can be increased as chatbots are collecting users' data as well while solving the queries. This data can be processed to generate more leads.

Virtual reality

The concept of **Virtual Reality (VR)** is derived from the meanings of both *virtual* and *real*. As humans, we perceive reality via our senses, and the notion of *virtual* is close by. *Near-reality* is what the phrase *virtual reality* signifies. This might, of course, imply anything, but it generally refers to a certain form of mimicry of the world around you. [*Figure 12.4*](#) shows how virtual reality creates a virtual environment:

*Figure 12.4: Virtual reality*⁶

Our senses and perception systems provide us with the information we need to make sense of the world around us. We are taught in school that there are five senses: touch, taste, smell, vision, and hearing. Although they are our most visible sense organs, they are only the beginning. There are several more senses than this, including a feeling of balance, that we humans have. In addition to these additional sensory inputs, our brains also interpret sensory information differently, ensuring that we get a wide range of information from our surroundings.⁷

Our senses provide us with all of the information we have about the world. What we see as reality is nothing more than the brain's ability to make sense of the information we get from our bodies. So, it seems obvious that your view of reality would shift if you could trick your senses into receiving false information. You had to be shown the version of the reality, which is not really there, but it will seem to be real to you because of your viewpoint.

Features of virtual reality systems

All the virtual reality systems have the same features, like the capacity to display three-dimensional visuals, which are common to all of them. These visuals look life-sized to a person seeing them.

Additionally, when individual travels around their surroundings, their peripheral vision changes as well. If a person's head and eye movements are coordinated with their reaction, such as a shift in perception, then success has been achieved. As a result, the resulting virtual world is both immersive and engaging.

People should be able to interact with a virtual world in real-time and get the right replies as they explore their surroundings. Whenever there is a lag

between a user's activities and also the system's reaction, it causes complications for the user. Stifled, mechanical contact occurs because the individual is aware that they exist in such an artificial environment but also modifies their behavior appropriately.

Interaction should be natural and free-flowing, and the outcome should be a memorable experience.

Benefits of VR marketing

There are various benefits of VR marketing:

- **Impresses users and clients**

Virtual reality is a glitzy and eye-catching technology that is sure to leave a lasting impression. People are usually eager to get their hands on new technology and tend to have high expectations for immersive experiences. So, you can easily surprise them and leave a lasting impression on them with your goods or service.

- **Facilitates better engagement between a user and product**

Your customers will learn a lot about your product or service by interacting with it in virtual reality. It is also possible to build an emotional connection between a consumer as well as a product if you make the experience enjoyable.

- **Easy to deploy campaigns**

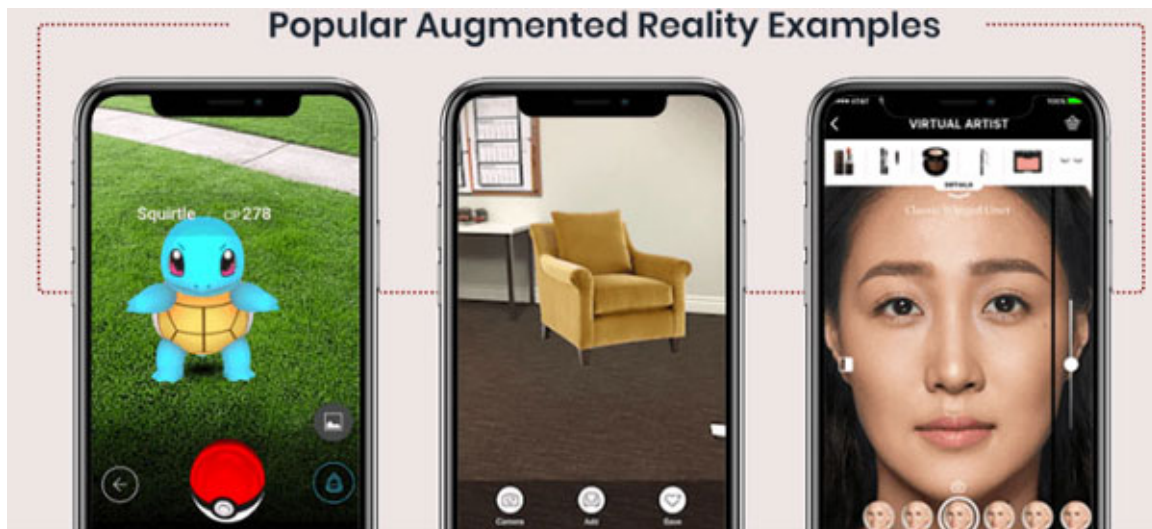

Virtual reality can be delivered to anybody with only an app as well as a headset. At this point, we are talking about attending events or seeing a firm's premises in person. You may also make the app accessible on the Web for current VR users to download as well as a test from their own computers.

- **Reduces the workload of sales teams**

Virtual reality may also be used as a sales tool, allowing customers to swiftly transition from looking as well as learning about the product to making a purchase. This rewarding and also practical experience may considerably minimize the number of requests made to sales agents by customers.

Augmented reality

The use of the digital visual components, music, or the other sensory inputs transmitted through the technology creates an improved representation of the actual physical environment known as **Augmented Reality (AR)**. Many organizations in the field of mobile computing and commercial apps are adopting this strategy. [Figure 12.5](#) illustrates the use of augmented reality by marketers:

*Figure 12.5: Augmented reality*⁸

An important purpose of using augmented reality is to emphasize and comprehend certain aspects of physical environment, so that they may be used in the real-world applications, in the midst of a growth in data collecting and analysis. In addition to providing valuable information for business decision-making, the big data may also assist businesses obtain a better understanding of consumer purchasing patterns.

Benefits of augmented reality

There are various benefits of augmented reality:

- **Encourage purchases**

A customer may hold the product in their hands without ever leaving their house thanks to AR. The two instances of augmented reality experiences which stimulate purchases, including the ability to test drive a prospective new automobile and to put on the new lipstick color.

- **Reduce returns**

The time and money spent on the return preparation of a product can add up quickly for any brand. To reduce the risk of a return, shoppers may use AR to try out things before they purchase them. For example, *Lenskart.com* allows its user to try different glasses on their face, as shown in [figure 12.6](#):

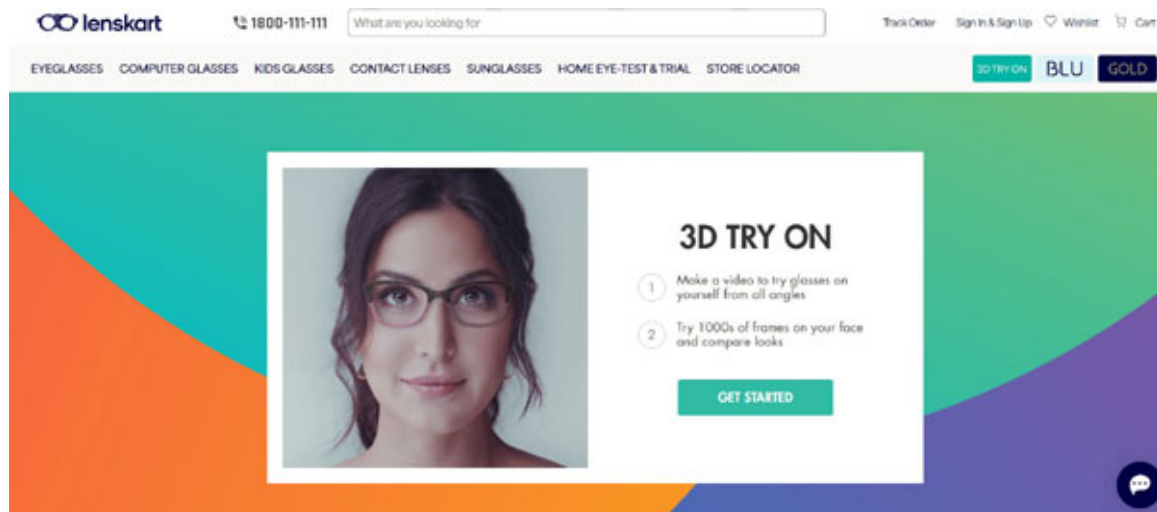

Figure 12.6: Augmented reality²

- **Provide branded experiences**

In other cases, purchases are made simply since the whole in-store buying experience is so pleasant. Of course, the website cannot replicate it. Customers' in-home experiences may be customized to make them feel as if they are at the shop using AR.

- **Generate excitement**

Consumers may now easily skip adverts on television as well as block them online thanks to technological advancements. People, on the other hand, often go out of their way to seek out AR experiences, indicating that they are already invested in your brand.

[Customer relationship management \(CRM\)](#)

CRM is a strategic approach for building strong and valuable relationships with the potential and existing customers of your brand. CRM helps in improving the overall quality management of your organization by connecting to your customers and improving profits. The main aim of CRM is to improve business relations and interactions with customers. Customers should be the focal point of your brand's strategy rather than your products and services.

CRM offers a number of opportunities for building a relationship with your sponsors, employees, suppliers, and almost everybody related to your organization.

CRM is a process of designing a strategy that makes your interactions with customers more meaningful and personalized that converts a person into a loyal customer. CRM combines sales, marketing, and customer support functions, which help in better understanding of buying habits, better identification of potential customers, and increased customer satisfaction. CRM strategy consists of the following five steps for managing and analyzing customer data, as shown in [figure 12.7](#):

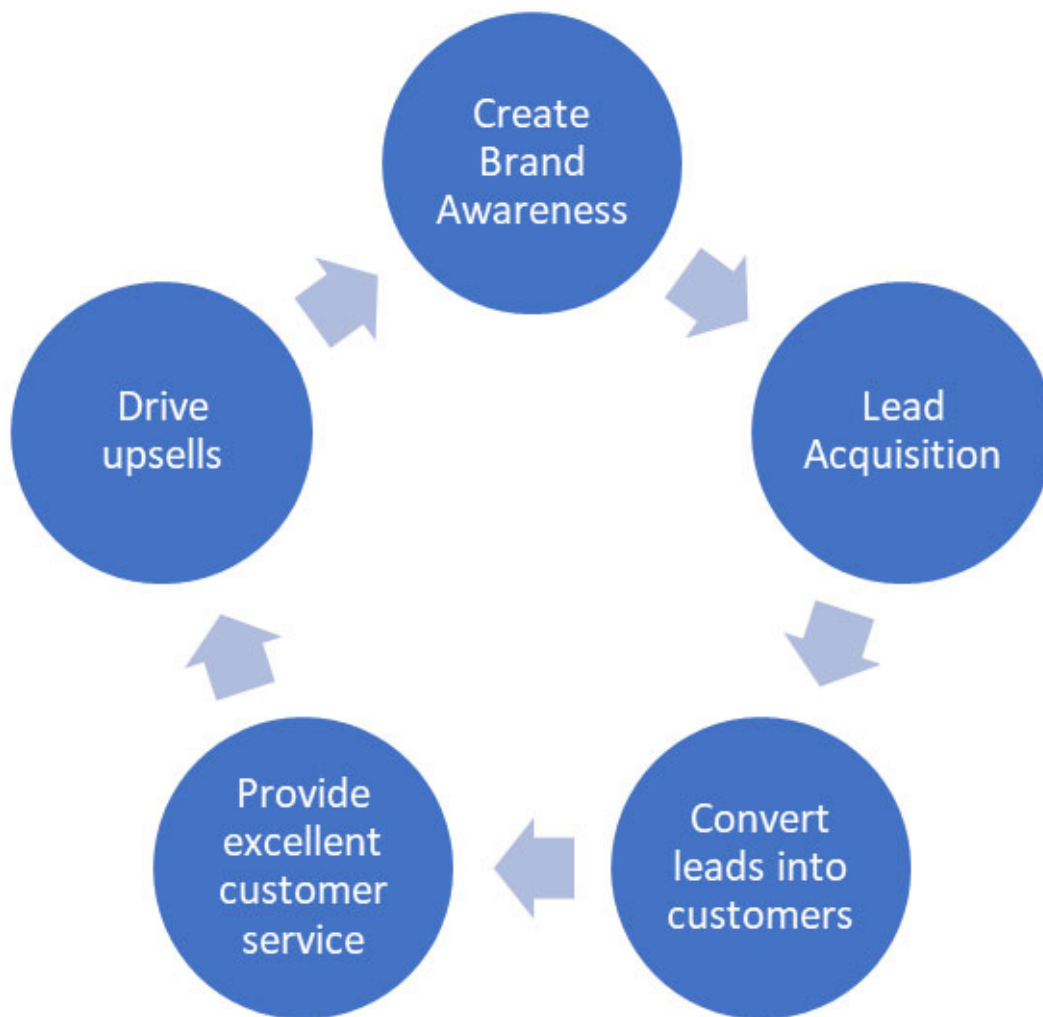

Figure 12.7: Steps of CRM

Create brand awareness

Marketers should strategize to acquire new customers for the brand. You should research well about demography, interests, and communication channel preferred by your target audience. After identification of the target audience, you should create segments of your audience on the basis of their interests and should create different marketing campaigns relevant to each segment. Marketing campaigns should be unique to the customer's requirements in each segment.

Lead acquisition

To acquire more leads, you should encourage your target audience to get engaged with your brand. You can encourage them by offering some giveaways or by setting up a live chat on your website by using chatbots. You should personalize your outreach program for building a healthy and valuable relationship with your potential customers.

Convert leads into customers

After the successful lead engagement, you should strategize to convert them into customers. This can be achieved by analyzing data on past sales.

Provide excellent customer service

For retaining the just converted customer, you should provide the best quality customer support service. You should provide a great customer experience for converting your customers into loyal customers of your brand. You should provide multichannel customer support for providing customer service as per their need.

Drive upsells

This step encourages the customers to buy new products launched by the same brand. You should expose all of your products or services to your customers. This will help your brand in increasing revenue by inviting customers to buy more products. This can be achieved by sending personalized e-mails.

CRM includes the following tools and methods a business uses to keep track of its external and also internal customers and connections:

- E-mail subscribers
- Sales opportunities

- Advocates
- Sales leads
- Customers
- Employees

CRM has the following four components:

Customer satisfaction

Customer satisfaction is a degree of perception about the product or service offered by your brand. If the customer is satisfied with the brand, he is going to advocate for the brand and will purchase again the same product or other products offered by the brand, otherwise will consider buying the same product from some other brand.

Customer loyalty

Loyal customers are assets to the brand as they are going to purchase the same product again and will act as earned media for the brand's publicity.

Customer retention

Retained customers act as a brand ambassador. Customer retainment is very important for an organization as it is very expensive to target new customers because they have to go through a complete cycle of the marketing campaign.

Profitability

A brand will be able to continue serving its customers only if they are earning good profits. The purpose of CRM is to make a business more profitable.

CRM strategy and technology—how they work together

It is important to understand what CRM is and how to choose the best CRM system for your organization. Understanding the distinction between CRM technology and CRM strategy is critical before discussing the advantages of a CRM product. [*Figure 12.8*](#) show a CRM dashboard:

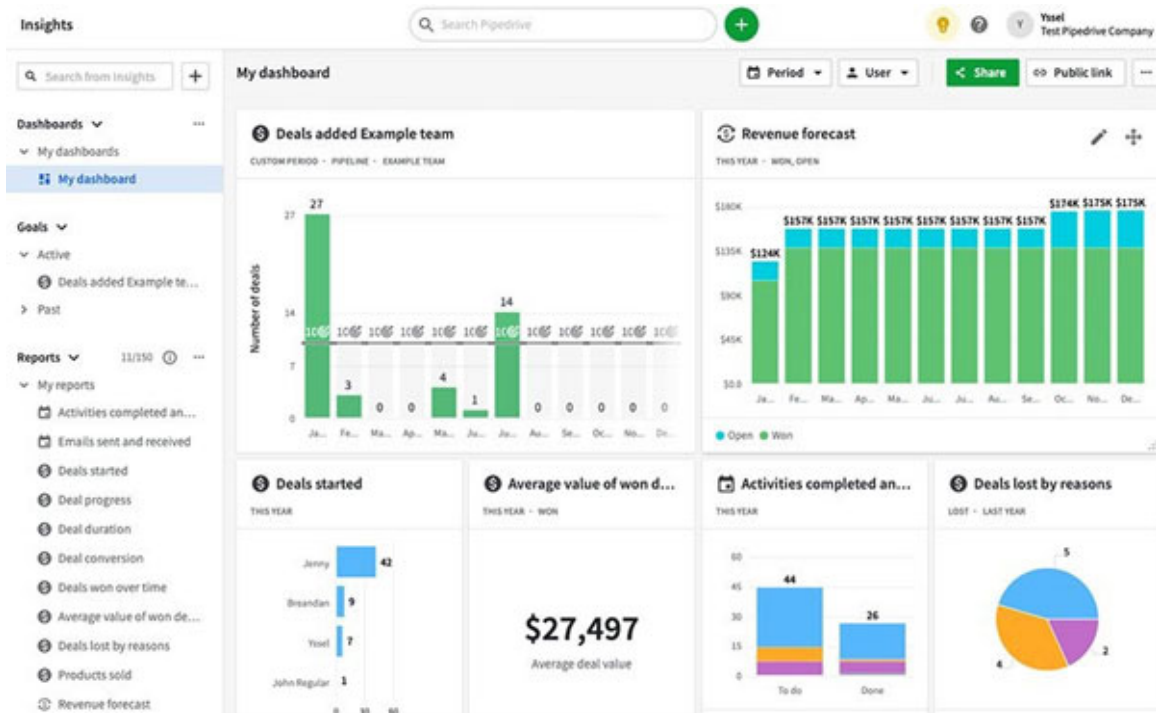

Figure 12.8: CRM dashboard screenshot as an example¹⁰

CRM Technology: Organizes, uses, shares, and acquires client information via a central platform. There is also the opportunity to communicate and monitor all the touch points with contacts with this tool.

CRM Strategy: An organization's CRM operations follow this pattern in order to ensure consistency and efficiency.

Having a customer-centric approach is the greatest way to make use of CRM technologies. The technology must support this plan, rather than the other way around.

Most successful businesses use CRM as a strategic role in every department of the company. In this way, sales, marketing, and customer success teams may work together more effectively.

AI in marketing

Automated judgments based on the data gathering, data analysis, and further observations of the audience or the economic trends may be made using AI marketing. In marketing, wherein speed is critical, and AI is frequently used. AI systems use data and consumer profiles to understand how to effectively engage with clients, then give them personalized messages at the perfect moment without involvement from the marketing team members, guaranteeing

optimal productivity. AI is used by many marketers today to supplement their own marketing teams or to handle more mundane jobs that need less attention to detail, such as sending out e-mails, as shown in [figure 12.9](#):

Figure 12.9: CRM dashboard screenshot as an example[11](#)

- Online advertisement
- Real-time personalization
- Chatbots
- Predictive analysis
- Web designing
- Content generation
- Content curation
- E-mail marketing
- Voice search optimization
- E-commerce

Components of AI in marketing

Marketers' ability to engage with customers is clearly aided by the use of artificial intelligence. Today's top solutions for closing the gap between vast

volumes of consumer data acquired and useful next actions that could be used in future campaigns include the following components within AI marketing:

Machine learning

AI is at the heart of machine learning, which uses computer algorithms to evaluate data and learn from past experiences. Machine learning-enabled devices examine incoming data in light of relevant previous data, allowing them to make judgments depending on what has been done previously.

Big data and analytics

Marketers can now assess their efforts and properly ascribe value across the channels, thanks to the proliferation of big data. Several marketers are having difficulty deciding which data sets are worthwhile to acquire, which has resulted in a data oversupply.

AI platform solutions

A centralized platform for handling the massive volumes of data acquired by marketers is provided by AI-powered solutions. Your marketing information may be derived from such platforms, which can help in making data-driven choices regarding the most effective means of reaching the company's target market. Bayesian Learning and forgetting frameworks may assist marketers in better assess how responsive customers are to certain marketing activities.

Challenges for AI marketing

A thorough awareness of client desires and preferences is essential to modern marketing, as is the capacity to respond swiftly and also effectively to that information. AI's capacity to make real-time, data-driven judgments has pushed marketing stakeholders to the forefront. AI may be a powerful tool for marketers, but they should be careful when determining how to use it.

Training time and data quality

In order to fulfill marketing objectives, AI solutions do not have a predetermined set of activities to execute. It takes a lot of time and effort to learn about the company's objectives, customers' preferences, historical patterns, and general backdrop. This not only takes time but also necessitates quality control checks on the data. Without high-quality data, AI systems

would not be able to make the best judgments for consumers, resulting in a decrease in their value.

Privacy

Regulators and consumers alike are taking a hard look at how companies use their personal information. A company's reputation might be severely damaged if it does not adhere to data privacy laws like the **General Data Protection Regulation (GDPR)**. In terms of artificial intelligence, this is the problem. Without explicit legal rules in place, the tools might overstep in terms of exploiting customer data for personalization unless they are properly trained to do so.

Getting buy-In

Marketing departments may have a hard time convincing corporate leaders of the advantages of AI investments. Even if ROI and efficiency are easy to measure, it is more difficult to demonstrate how AI has increased customer satisfaction or the reputation of the company. As a result, marketing departments must guarantee that they have the tools necessary to link qualitative improvements to AI expenditures.

Adapting to a changing marketing landscape

The day-to-day operations of marketing are about to be disrupted by AI. Marketers should determine which employees would be eliminated and which can be created as a result of technological advancements. A recent survey found that roughly six out of every 10% of marketing analyst and expert positions would be replaced by marketing technology.

Conclusion

In this chapter, we learned about marketing via customer engagement as a way to build relationships with new and returning consumers. Small, low-power Bluetooth transmitters are known as *beacons*, and they are used to deliver signals to other smart devices. Beacons help make location-based searches and interactions more efficient and precise.

Connecting beacon signals to a Google Ads account might provide you with a wealth of information about your offline activities. Bluetooth proximity technology is an advance over previous proximity technologies such as GPS

and Wi-Fi. Your customers' journeys, marketing initiatives, and in-store conversions might all benefit from this data.

The most cost-effective way to provide customer service is via the use of a chatbot. Using chatbots, users may get answers to their questions quickly and easily. VR is a glitzy and eye-catching technology through virtual reality. It is possible to build an emotional connection between a consumer as well as a product if you make the experience enjoyable. Virtual reality may also be used as a sales tool, allowing customers to swiftly transition from looking as well as learning about the product to making a purchase. An important purpose of using augmented reality is to emphasize and comprehend certain aspects of the physical environment so that they may be used in real-world applications in the midst of growth in data collecting and analysis.

This book provides a deep insight into the fundamentals of digital marketing. We introduced key components of digital marketing such as social media marketing, search engine optimization, YouTube marketing, mobile marketing, and e-mail marketing in this book. We discussed the strategies marketers should follow for designing a successful marketing campaign for promoting their brands. The reader will be able to design promotional advertisements on various social media platforms such as Facebook, LinkedIn, and Instagram. We also discussed the concept of search engine marketing. The reader will be able to use various analytical tools for measuring and improving the ad campaigns. The reader of this book will be able to develop a thorough understanding of modern tools and techniques used in the field of digital marketing.

Key terms

- **Touchpoints:** Target/places or areas where you can interact with potential customers in an effective manner.
- **Beacon:** Device designed for attracting attention to a specific location.
- **Chatbots:** Software that process and replicate human interactions.
- **CRM:** Customer relationship management.
- **Augmented reality:** Creating a representation of the physical environment using technology.

Questions

1. Explain cross-device marketing.

2. What are the advantages of beacon technology?
3. Explain in brief chatbots and their purposes.
4. What are virtual reality and its features?
5. What is CRM? Explain its working.
6. What is the role of AI in marketing?

Class exercise

1. Think of a digital marketing strategy for cross-device marketing for your company.
